The basis for professional installation

Shaping the future.

Constantly **rethinking** the present is the best way to actively shape the future. To scrutinise the tried and tested to see if there is still room for improvement. This applies to our products just as much as it does to our actions.

We believe that sustainable thinking and actions are also reflected in well thought-out and durable installation products and tools. These not only save you time when implementing your projects, but also directly reduce the use of energy and raw materials. Potential for improvement is continuously identified and utilised.

With our **new generation of UP¹ flush-mounting boxes**, we are providing more convenience and improved working ergonomics in our traditional business field of “electrical installation”. We have taken the professional and efficient installation of flush-mounting boxes to a new level.

Our product developments for **clean room, damp room** and **timber construction** applications also offer you certified solutions for applications that go beyond the ordinary. Our new products also offer a wide range of applications for **fire protection** requirements under building regulations. Feel free to take a look at our new generation of **HWD 68+ fire-protection boxes**. In the same way, our **new tool programme** with cutters for professionals stands for robustness, easy handling and precise work results.

For **120 years**, KAISER has stood for **“The basis for a good installation”**. Our products have set many decisive trends with innovative, safe and, in particular, solutions suitable for the trade. And we will not stop scrutinising the present in order to shape the future – we promise!

*Best regards,
Burkard und Ulrich Kaiser*

Flush-mounting / masonry

Complete system for all flush-mounting/masonry applications.
Air-tight, fire protection, sound insulation, internal and external insulation.

FLUSH-MOUNTING

Cavity wall

For all cavity wall types. Standard, air-tight and halogen-free.
Solutions for fire protection, sound insulation and radiation-protection walls.

CAVITY WALL

Concrete construction (on-site mixed concrete / precast concrete)

Boxes, housings, cable and conduit systems for on-site concrete and automated / manual factory production and for modular room modules like bathrooms or garages.
Universal installation housings and international products for walls and ceilings.

CONCRETE

Installation housings

For luminaires, loudspeakers, displays and much more. For walls and ceilings in on-site mixed concrete or precast concrete. As well as for fire protection requirements, insulated hollow ceilings and thermal insulation systems.

HOUSINGS

Fire protection

Box, housing and sealing systems for fire-protection walls and ceilings.

FIRE PROTECTION

Pluggable installation / surface mounting

Modular distribution boxes for cable support systems.
Waterproof cable junction casing for outdoor applications.

PLUGGABLE

Connectivity

Solutions for professional fibre-optic and broadband expansion.
Fibre-optic laying and installation in street distribution (network level 3) and building and unit distribution (network level 4).

CONNECTIVITY

Cable glands

The professional Syntec® programme. Fittings in all sizes in plastic and brass.

CABLE GLANDS

Tools

High-quality system tools for professional electrical installation.

TOOLS

Service

Wanted. Found. From communication to the item number.

SERVICE

Assume responsibility.

KAISER has been on the market as a family-run company with integrity, fairness and reliability for 120 years. We are recognised as a pioneer and innovation leader that has always defined new standards for the entire industry. Our understanding of corporate and social responsibility is part of our DNA. It has been serving us as a guide for three generations, determining our strategic decisions and our actions.

We believe that sustainability is an important pillar of entrepreneurship. In addition to the very tangible factors such as energy, raw materials and resources, we understand sustainable action to be, in

particular, our mission to be aware of our social responsibility. We demonstrate our attitude towards our partners in the market and are happy to document this by signing the ZVEI Code of Conduct. With the four locations of the KAISER GROUP in Germany, Belgium, the Netherlands and Switzerland, we are well networked in Europe and can therefore identify real trends, focus our energy on relevant topics and quickly feed adjustments back into the markets.

We would like to thank you for your trust in us and invite you to shape the future together with us.

Join us on this exciting journey.

Our best flush-mounting box. UP¹.

- 25 % more installation volume
- Plaster-free quick-fixing with clamping ribs
- Stable and side-neutral combination

For the Features

1555-26

1055-26

1068-26

1656-26

Professional clean room installation. Clean room one-gang junction box.

- For professional installation in clean room walls and functioning containments
- Certified according to VDI 2083 sheet 19 (tightness class 7, extended class 11)
- Air-tight design with sealing membranes and peripheral sealing lip

9264-32

With universal screw-on surface. Installation housing O-range ECON® Universal 120.

- For mounting accessories and installation accessories
- For individual round and cornered installation openings
- Toolless cable or conduit entries

9273-50

Optimum sealing of the electrical installations: Waterproof one-gang junction box.

- For installation in sealed interior rooms, such as commercial kitchens, bathroom modules or damp rooms in hospitals
- Tested and certified water tightness
- Six air-tight and watertight cable entries

9264-42

Safe installation in drywall construction. **One-gang and one-gang junction fire protection boxes HWD68+.**

- For F30–F90 or EI30–EI90, as well as F30-B – F90-B fire-protection walls
- Sound insulation function of the wall
- Toolless cable and conduit entry

pg. 190
pg. 228

9914.10

For universal installation entries. **Central transition casing**

- For leaving out several cables
- Conduit entries for Ø 20, 25, 32, 40, 50 and 63 mm
- Positioning of the conduit entries above the first reinforcement layer or the top of the filigree ceiling

Subscriber connection (FO-SC) E3S Connect®, surface mounting / flush-mounting, connection at HTP / FO-BD

- With pre-assembled E3S fibre-optic cable in different lengths
- Cable retractable, insertable and blowable
- Pre-assembled cable with 2 or 4 fibres in a handy unwinding box

To the product film

E3S Connect® (pluggable)

Distribution box for data networks. AK2 Data & AK2 DALI.

AK2 Data:

- Front part equipped with break-out openings for adapters to accommodate Keystone modules.

AK2 Dali:

- Prefabricated with 5-pin snap-in connectors for DALI applications
- Connectors are self-locking, can be released with tools
- Prefabricated with halogen-free connection wires 2.5 mm².

AT1961, AT1965

AT2250, AT6504

Drilling with a triangle. Trilo – The new cutter generation.

- Improved operating life time thanks trilo geometry
- Fast working due to easy / reliable ejection of the drill core
- Dimensionally accurate work for cavity wall installation

Flush-mounting installation

Flush-mounting base installation

- Complete system for all flush-mounting / masonry applications
- UP-PLUS technology with combination spigot M20/M25 and up to 15% more installation space
- Plaster-free assembly with KLEMMFIX®
- Easy retrieval of boxes and casings through the use of signal covers
- International products for accessory installation according to national standards
- Halogen-free

Air-tight flush-mounting installation

- Air-tight installation as per GEG
- ECON® technology: air-tight device, one-gang junction boxes for toolless cable and conduit entries
- Air-tight sleeves for the air-tight feed-through of cables and conduits

Flush-mounting special solutions

- Fire protection products
- Sound insulation products
- Universal installation housing with mineral fibreboard for all common unit sizes (e.g. displays, LED luminaires, etc.)
- Installation solutions for environmentally-friendly construction

Insulated walls and ceilings

- Installation solutions for insulated walls and ceilings (ETICS)
- Secure fastening
- Prevention of heat bridges

Tools

- Professional system tools for fast, safe installation
- Extensive system accessories

from page 376

UP¹ flush-mounting boxes

UP¹, the new flush-mounting range for electrical installation, takes flush-mounting installation to a new level and makes it easier than ever before. 25% more installation volume compared to conventional flush-mounting one-gang junction boxes enables convenient accommodation of cables, connection terminals and installation accessories. The quick-fixing by means of ribs in all stones ensures up to 50% time savings during installation without plaster. The side-neutral and stable combination quickly allows multiple combinations to be created at a 71 mm centre distance. Thanks to open through-wiring and breakaway bridge, the device connection can be made without spatial separation. Accessories that are already wired, especially sockets, can therefore be installed particularly quickly and easily. The entries close to the base and through-wiring close to the base maximise the usable wiring space and facilitate the installation of the installation accessory due to the low-lying wiring material. Thanks to expanding claw fields and 4 x 3-fold screw domes, fixing the accessory is easier and more flexible than ever before. The new plaster compensation frame enables continuous plaster compensation from 10 to 35 mm with only one accessory.

- 25% more volume compared to conventional flush-mounted one-gang junction boxes
- Quick mounting in all wall constructions (ribs on the box, no mounting of accessories, use of PU foam is possible)
- Stable and side-neutral combination
- Open / diverse through-wiring
- Fully insulated through-wiring close to the base for deep boxes
- Entries close to the bottom of the box
- Triple conduit feed M25 from one direction to one-gang and one-gang junction boxes
- ECON[®] multi-cable conduit entries
- 4 triple screw domes / expanding claw fields
- Entries in the bottom of the box
- Stepless plaster compensation (accessories)

Application examples

Vertically perforated bricks with and without filling, solid bricks.

Lightweight concrete.

Cellular concrete.

Lime sand brick.

UP¹ one-gang boxes, UP¹ one-gang junction boxes for flush-mounting installation

Processing instructions

All UP¹ one-gang boxes offer generous installation space for convenient accommodation of cables, connection terminals and installation accessories.

Overlapping box diameters allow for a stable combination and open through-wiring.

After plastering, connecting accessories can be implemented in many different ways,...

...this makes it possible, for example, to insert the connecting cables of pre-wired accessories, such as sockets, quickly and easily without having to connect them in the boxes first.

Secure connection with the new side-neutral combination

The safe combination with the KAISER side-neutral combination: place the boxes together – no matter which way round – and press them together. Now you have a stable combination with 71 mm standardised combination distance.

No matter which way the boxes meet...

...put them together...

...and the boxes lock together stably.

Stable and side-neutral combination in 71 mm standardised combination distance.

Processing instructions – Entries

Due to entries being close to the base, the cable can be stowed directly on the base and take up little space.

Maximum usable space, thanks to fully insulated through-wiring close to the base.

Maximum flexibility thanks to three feeds up to M25 from one direction...

...e.g. next to door openings.

The UP¹ boxes also have entries in the base...

...2 entries each up to Ø 11 mm and 2 entries each up to Ø 25 mm with stiffening against pressure from expanding PU foam.

All cable and ECON® Multi-Membranes are labelled...

...this makes it easier to select the optimal entry.

UP¹ one-gang boxes, UP¹ one-gang junction boxes

for flush-mounting installation

Processing instructions for the ECON[®] Multi-Membrane

The toolless cable and conduit entries reduce installation time and make processing easier.

The elastic ECON[®] Multi-Membrane fits air-tight around the conduit or cable.

Each cable and conduit diameter up to Ø 25 mm can be installed quickly and air-tight.

Vertical draughts occur in hollow chamber blocks. The UP¹ boxes with ECON[®] technology prevent air exchange.

Processing instructions – Combination after plastering

After plastering, connecting accessories can be implemented in four different ways:

Classic connection in the middle area of the one-gang junction box...

...or by the fully insulated connection close to the base in the one-gang junction boxes,...

...without routing the cable in bends from one box to the other.

Moreover, in the case of permanently installed boxes, it is possible to break out the separator wall between the combined boxes in the upper area simply with a pair of combination pliers by means of a tilting movement...

...furthermore, the underlying ECON[®] Multi-Membrane can be additionally removed for even more wiring space.

This makes it possible to insert the connecting cables of pre-wired accessories, such as sockets, quickly and easily without having to connect them in the sockets first.

All UP¹ one-gang boxes offer generous installation space for convenient accommodation of cables, connection terminals and installation accessories.

Electrical installation

The signal bristles indicate the position of the boxes after plastering.

Open the boxes with one blow of the hammer.

Accessory fixing by means of: expanding claws or...

...4 x 3 screw domes for maximum flexibility.

Technical installation instructions

The quick-fixing of the UP¹ ECON[®] Fix boxes saves up to 50% installation time compared to the conventional installation of flush-mounting boxes with plaster. The box is securely fixed in the wall and held in position before plastering.

- For fitting boxes without plaster
- For all common bricks such as lime sand brick, cellular concrete, lightweight concrete, vertically perforated bricks with and without filling
- Secure, clean and time-saving
- Alignment and secure mounting even before plastering
- Can also be used at sub-zero temperatures
- By plastering the wall and allowing plaster to penetrate into the annular gap around the box, the box is finally and permanently fixed
- For thin plaster, remove the depth stop and additionally fix the boxes with flush-mounting gun foam
- Not applicable when using clay plaster

Installation advantages – Installation without plaster

The UP¹ ECON[®] Fix family with rib fixing for mounting without plaster.

Fixing with ribs on several levels for secure fixing in all stones.

Depth stop to ensure the minimum plaster thickness.

The plaster penetrates between the box and the stone, ensuring that the box is securely and permanently fixed.

Installation – Installation without plaster

Make the installation opening Ø 82 mm with the diamond grinding head (Art. No. 1088-02).

Insert the UP¹ one-gang box or one-gang junction box with ribs.

Put on the signal cover (Art. No. 1181-65) and plaster the wall.

The penetration of the plaster between the box and the stone fixes the box securely and permanently.

UP¹ one-gang boxes, UP¹ one-gang junction boxes

for flush-mounting installation

Installation instructions – Installation with flush-mounting gun foam

Alternatively, the UP¹ ECON[®] Fix boxes can be fixed with flush-mounting gun foam (Art. No. 1155-95).

Make the installation opening Ø 82 mm with the diamond grinding head (Art. No. 1088-02).

Spray the wall with water...

...and insert the UP¹ one-gang box or one-gang junction box with ribs.

Pierce the TPE membrane in the centre of the bottom of the box...

...and foam-in the box.

If necessary, remove excess foam after curing so that plaster can still penetrate between the box and the stone.

Then fit signal cover (Art. No. 1181-65) ...

...and the wall is plastered.

The penetration of the plaster between the box and the stone fixes the box securely and permanently.

UP¹ ECON[®] Fix one-gang box

- More volume than conventional one-gang boxes
- With quick fixing for installation without plaster
- With 4 x 3 screw domes
- Side-neutral combination
- Many through-wiring possibilities
- Standardised combination distance 71 mm

UP¹ ECON[®] electronics box and UP¹ ECON[®] two-gang junction box

The UP¹ ECON[®] electronic box and UP¹ ECON[®] double one-gang junction box extend the new UP¹ family. The UP¹ ECON[®] electronics box provides a generously-sized accessory installation space and additional space for fitting small switch actuators, etc. The matching separator wall allows the standardised installation of bus and operating voltage in one box. The UP¹ ECON[®] two-gang junction box makes it easier than ever to install special accessories. The large installation opening and the very large installation compartment make it possible to install block and pre-wired accessories, and they create space for the assembly of cables for multi-media connections.

- With quick fixing for installation without plaster
- Elastic sealing membrane for guaranteed air-tightness
- Variable and tool-free insertion of cables and DIN EN conduits up to M32
- Additional space for decentral installation of KNX / smart home UP actuators, flush-mounted cut-off relays for Venetian blinds, and many more
- Separator wall for standardised fitting of two voltage types in one box
- Maintenance of cable bending radii for network connection boxes – optimal data transfer
- Easy installation of pre-wired accessories and multi-media connection boxes

Examples of applications for the ECON[®] UP¹ electronics box

By inserting the separator wall, two different voltage types can be fitted in a standardised way in the electronics box. In addition, they provide a generously-sized installation space...

...for the decentral installation of, for example, small window actuators for controlling Venetian blinds and heating in the outer wall.

Thanks to the electronics box, it is easy to install radio-controlled actuators, etc., without putting excessive strain on cables or accessories.

Network connection boxes can be used while maintaining the cable bending radii and with the best possible data transfer speeds.

Processing instructions

The permanently elastic sealing membrane used in ECON[®] technology guarantees the airtight connection of cables up to Ø 11 mm, and conduits up to Ø 32 mm.

Two ECON[®] multi-membrane entries up to M32 enable the insertion of prefabricated cables with connectors such as HDMI.

The sealing membrane fits tightly around the cable or conduit and permanently prevents leakage in outer walls and in inner walls next to outer walls.

The peripheral sealing lip between the box body and the front part ensures an air-tight connection i.e. retention of the building's air-tight seal.

UP¹ ECON[®] Fix electronics box

- With quick fixing for installation without plaster
- With 4 x 3 screw domes
- Side-neutral combination

Stepless plaster compensation frame UP¹

With the newly developed plaster compensation frame, even accessories in boxes that are installed too low can be installed flush with the wall and in compliance with standards. Also ideal for renovations. The plaster compensation frame is stepless adjustable and can therefore, e.g. bridge retrofitted wall plaster or tiled walls professionally.

- To compensate for boxes that are positioned too low
- Continuously adjustable from 10 - 35 mm
- Installation accessories can be installed directly with the compensation frame or retrofitted
- Including screws 40 mm, Pozidriv drive

Processing instructions

Insert the plaster compensation frame into the box.

Either mount the accessory and the plaster compensation frame together on the box with a screw...

...or first mount the plaster compensation frame and fix the installation accessory later.

The plaster compensation frame can be shortened in segments if required.

Stepless plaster compensation frame UP¹

- To compensate for deep-seated boxes
- To maintain IP protection class
- With 2 fixing screws 40 mm

Subject to modifications

Flush-mounting installation boxes

With the innovative KAISER UP-PLUS technology, the flush-mounting range impresses with a PLUS in terms of fitting convenience and flexibility. This range with the practical combination connection piece for quick, safe combinations ensures a torsion-proof pluggable connection for combinations with the snap-in connector, as well as a guaranteed standardised combination distance of 71 mm. The variable combination connection pieces are suitable for M20/M25 conduits and cables, and are standard for KAISER flush-mounting boxes. There are further entries for M20/M25 conduits and cables around the circumference of the box, as well as an entry for M20 conduits or cables at the bottom of the box. Four screw domes and two expanding claw fields offer secure, flexible mounting options for all types of devices, and thus round off the flush-mounting range.

- Variable combination connection piece for conduits up to M25 and cables
- Snap-in connector for torsion-proof and guaranteed standardised combination distance of 71 mm
- Flexible for screw and expanding claw fixing
- Optimum installation space
- UP-PLUS – with distance support, tunnel connector and KLEMMFIX® for quick, secure installation

Entries for cables and DIN EN conduits

Secure combination with the combination connection piece

An audibly secure combination with the KAISER combination connection piece. Place the boxes next to each other. Place the centering piece in the groove and press together until you hear a „click“. Now you have a torsion-proof combination with a standardised combination distance of 71 mm.

One-gang box

- dimensions in accordance with German DIN 49073
- For M20/M25 conduits and cables

Product-Data

Depth	46 mm	46 mm
Screw spacing	60 mm	60 mm
Number of screw domes	4	4

Inner packaging/shipping	10 / 100

Electronics box

The electronics box has space for electronic components. The accompanying separator wall also enables you to have different kinds of voltages in one box.

- For accessories and electronic components such as EIB actuators, communication and network technology, radio-controlled elements, alarm modules, etc.
- Can be combined with KAISER one-gang boxes via snap-in connector
- Optimal for use as an entry box for combinations
- The separator wall (supplied) turns it into a twin-chamber box

Application

The range of possibilities is as diverse as their solutions.

Here for example is a relay for central control of several roller blind drives or a flush mounting EIB interface with a conventional button.

For communication equipment, the box volume is ideal for accommodating cable reserves.

Concealed installation of electronic components such as radio-controlled modules, EIB actuators, emergency lighting or cable lengths in data network technology.

Electronics box

- Twin-chamber box (with separator wall)
- dimensions in accordance with German DIN 49073
- For M20/M25 conduits and cables

Length x Depth	149 x 67 mm
Screw spacing	60 mm

Conduit entries M20	11
Conduit entries M25	2
Combination conduit entries M20/25	4
Device screws	2
Halogen-free	Yes
ΔE	Yes
Art.-No.	1068-02
Inner packaging/shipping	10 / 100

Air-tight flush-mounting boxes

Flush-mounting boxes with ECON® technology permit guaranteed air-tight installation. They offer a variety of options for air-tight conduit and cable entries and can be either plastered or processed using Klemmfix®. The new ECON® Multi-Membrane allows the insertion of several cables without gusset formation or the insertion of conduits up to M25.

- Air-tight design with ECON® sealing membranes
- Avoids leaks in exterior facades made from hollow chamber blocks
- Variable and tool-free cable and conduit entries
- Torsion-proof, guaranteed standardised combination distance of 71 mm

Entries for conduits and DIN EN conduits

Processing instructions

The tool-free cable and conduit entries reduce installation time and make processing easier.

The elastic sealing membrane fits air-tight around the conduit or cable.

Each cable and conduit diameter up to Ø 25 mm can be installed quickly and air-tight.

Vertical draughts occur in hollow chamber blocks. The UP boxes with ECON® technology prevent air exchange.

Air-tight one-gang boxes, One-gang junction boxes

for flush-mounting installation

One-gang box ECON® 10

- Air-tight design with ECON® sealing membranes
- dimensions in accordance with German DIN 49073

Electronics box ECON® and two-gang junction box ECON®

The electronics box and two-gang junction box using ECON® technology and a multi-membrane are ideal for installation in masonry walls in which the interior plaster forms the air-tight closure on the room side. The electronics box ECON® provides a generously-sized accessory installation space and additional space for fitting small switch actuators, etc. The matching separator wall allows the standardised installation of bus and operating voltage in one box. The two-gang junction box ECON® with a multi-membrane makes it easier than ever to install special accessories. The large installation opening and the very large installation compartment make it possible to install block and pre-wired accessories, and they create space for the assembly of cables for multi-media connections.

- Elastic sealing membrane for guaranteed air-tightness
- Variable and toolless insertion of single cables, duplex cables and DIN EN conduits
- Additional space for decentral installation of KNX / LON UP actuators, flush-mounted cut-off relays for Venetian blinds, and many more
- Separator wall for standardised fitting of two voltage types in one box
- Maintenance of cable bending radii for network connection boxes – optimal data transfer
- Easy installation of pre-wired accessories and multi-media connection boxes

Examples of applications for the ECON® electronics box

By inserting the separator wall, two different voltage types can be fitted in a standardised way in the electronics box. In addition, they provide a generously-sized installation space...

...for the decentral installation of, for example, small window actuators for controlling Venetian blinds and heating in the outer wall.

Thanks to the electronics box, it is easy to install radio-controlled actuators, etc., without putting excessive strain on cables or accessories.

Network connection boxes can be used while maintaining the cable bending radii and with the best possible data transfer speeds.

Air-tight one-gang boxes, one-gang junction boxes for flush-mounting installation

Examples of applications for the two-gang junction box ECON®

Thanks to its large installation opening without a central bridge, the two-gang junction box allows...

...the use of pre-wired accessories, block inserts, and many more.

It also provides an easy-to-use basis for the installation of multi-media connection boxes. The very large installation compartment has plenty of space for cable assembly.

Cable reserves and connection plugs can easily be inserted into the box and are then concealed behind the installation accessories.

Installation and connection option with distance support

Two-row combination with the two-gang junction box ECON® (Art. No. 1656-21) with two distance supports (Art. No. 1159-34)...

...for an optimised installation pattern (4-fold next to each other).

Two-row combination with the two-gang junction box ECON® (Art. No. 1656-21) and air-tight one-gang junction boxes (Art. No. 1556-21) with two distance supports (Art. No. 1159-34)...

...for an optimised installation pattern (6-fold next to each other).

Electronics box ECON®

- Separator wall for electrical circuit separation
- Air-tight design with sealing membranes

Sealing inserts

The sealing insert ensures air-tight closing of previously-installed one-gang boxes and one-gang junction boxes. It can be used in both flush-mounting and cavity wall installation. Its low installation depth makes use in one-gang junction boxes possible without restricting the wiring.

- Ensures later air-tight closing of one-gang boxes and one-gang junction boxes
- Toolless connection wire penetration is possible
- Guarantees later and permanent air-tightness

Application

Later air-tight closing of flush-mounting boxes.

Later air-tight closing of cavity wall boxes.

Pre-punched entry markings permit toolless connection wire penetration up to 2.5 mm².

Press sealing insert and installation accessories into the box and tighten with device screws.

Sealing inserts

Sealing insert for retrofit sealing of existing installation boxes in air-tight building shells. The insert encloses the cables and creates a guaranteed air-tight installation space.

Sealing inserts

- for retrofit sealing of all existing one-gang boxes and one-gang junction boxes
- permanently flexible plastic

Depth	36,5 mm
Diameter	60 mm
Air-tight	Yes
Halogen-free	Yes
Art.-No.	1040-01
Inner packaging/shipping	10 / 100

Sealing plugs 16-40

Sealing plugs with ECON® technology for sealing all standard electrical installation conduits in installation boxes or at cable outlets. The long sealing plug with three sealing lips and in different widths adapts itself to the installation conduit in use and guarantees air-tight and smoke-tight closing, even when the conduits are cut at an angle. From conduit size M25 and up, the membrane surfaces are separated by bridges, which ensure secure cable routing and prevent damage and gaps between cables.

- For empty conduit installations in an air-tight design or in fire protection areas
- Sealing plug with three sealing lips and different widths adapts itself perfectly to the installation conduit and guarantees an air-tight end
- Elastic sealing membrane for guaranteed air-tightness
- Toolless cable entry
- Reinforcing ribs in the membrane ensure air-tightness for the cables
- For all installation conduits M16 - M40, Pg 9 – Pg 36, 3/4" and 5/8"

Processing instructions

The long sealing plug with three sealing lips and different widths adapts itself perfectly to the installation conduit...

...and guarantees an air-tight end even when conduits are cut at an angle.

When air-tight installation is necessary, the sealing plugs prevent leakage at the conduit ends.

For installations in the field of fire protection, the sealing plug closes the conduit ends and ensures smoke-tight room separation.

Flush-mounting sound insulation one-gang junction box

Sound insulation box for use in solid construction sound insulation walls with stringent sound insulation requirements. The solid box body with additional sound insulation coating absorbs and reflects the sound, so that interference in adjacent rooms is excluded and the sound insulation remains intact as if no installation box were present.

- Maintains the wall's sound insulation protection
- Installation up to 5-unit combinations
- Opposing installation is also possible
- Variable combination connection piece for conduits up to M25
- Flexible for screw and claw fixing of the accessories
- Can be used with sound protection cover as a junction box

Sound insulation value R'_{w} up to **56 dB**

Examples of use

Example of installation using a switch-socket combination.

Use of an opposing sound insulation box.

Use of an opposing sound insulation box.

With sound insulation cover it can also be used as junction box.

Comparison of sound insulation

Solid wall 11.5 cm and 17.5 cm with 10 mm plaster on both sides.

1 Wall, without installations, 52 dB | **2** with one-gang junction box 1555-04, 32 dB | **3** with one-gang junction box 1569-01, 52 dB | **4** Wall, without installations, 56 dB | **5** with one-gang junction box 1555-04, 41 dB | **6** with one-gang junction box type 1569-01, 56 dB

One-gang boxes, One-gang junction boxes for flush-mounting installation

Installation

Cut a \varnothing 82 mm installation opening using a grinding head (e.g. Art. No. 1088-15).

Make exact cable and conduit entries with the universal opening cutter (Art. No. 1085-80).

For combinations, the one-gang junction boxes are snapped together.

The sound insulation box is simply fixed with plaster.

Combinations at a standard spacing of 71 mm.

Soundproof and fully insulated through wiring is ensured by the support connectors.

Example of installation using a switch-socket combination.

With the sound insulation cover (Art. No. 1184-69), the box can also be used as junction box.

Processing instructions

The flush-mounting sound insulation box offers 6 possible entries for conduits up to M25 and cables up to \varnothing 11.5 mm.

The support connector makes it easier to feed conduits up to M25 in the connection area.

In opposing installation, the sound insulation is guaranteed up to a five-way combination.

Allocation table for universal opening cutters

Flush-Mounting installation for sound insulation boxes		Ø setting
NYM cable	3 x 1.5 mm ²	7.5
	4 x 1.5 mm ²	8.5
	5 x 1.5 mm ² ; 3 x 2.5 mm ²	9.5
	7 x 1.5 mm ² ; 5 x 2.5 mm ²	10.5
Low-voltage cables	Integrated high voltage and MSR-Bus cable (N)Y(YSt)Y)M-J 3 x 1.5 mm ²	10.5
	EDV cable, S/STP 4 x 2 AWG23/1	7.5
	EDV cable, 100 MB S/STP 4 x 2 x AWG23/1	6.0
	Coaxial cable, double screening	6.0
	Coaxial cable, single screening	5.0
	Bus cable YCYM 2 x 2 x 0.8	5.0
	EDV cable screened, plus outer screening	5.0
	Cable for telephone and signal transmission with screening	4.0
	Telephone cable without screening	4.0
	Support connector	9060-98
Conduits according to DIN EN 60423 flexible (curled)	DIN EN 16 - Ø 16 mm	14.0
	DIN EN 20 - Ø 20 mm	17.0
	DIN EN 25 - Ø 25 mm	21.0

You can create cable entries with the prescribed strain relief easily and to the exact required size with the universal opening cutter (Art No. 1085-80).

Flush-mounting sound insulation one-gang junction box

INNOVATION

3D animation

Product-Data

- with 4 screw domes and 2 expanding claw fields
- One-gang junction box for solid construction sound insulation walls
- For conduits up to M25 and cables up to Ø 11.5 mm
- Combination distance: 71 mm

Depth	60 mm
Screw spacing	60 mm
Number of screw domes	4
Splayed claw fields	2
Tube entries up to M25	6
Cable entries of up to Ø 11.5 mm	6
for sound insulation walls up to	56 dB

- for sound insulation box
- Sound insulation function in conjunction with sound insulation box

Diameter	92 mm
Halogen-free	Yes
	Yes
Art.-No.	1184-69
Inner packaging/shipping	10 / 100

Screened one-gang junction box

Screened one-gang junction box for flush-mounting installation. The conductive coating suppresses interference with a high alternating field component, whether radiated or received.

- For environmentally-safe electrical installation
- With screening and potential conductivity
- The functional earth of the box must only be connected to the potential equalisation and not to the equipment grounding conductor (PE conductor)

Installation

Cut an accurate wall opening (Ø 82 mm) with the diamond grinding head.

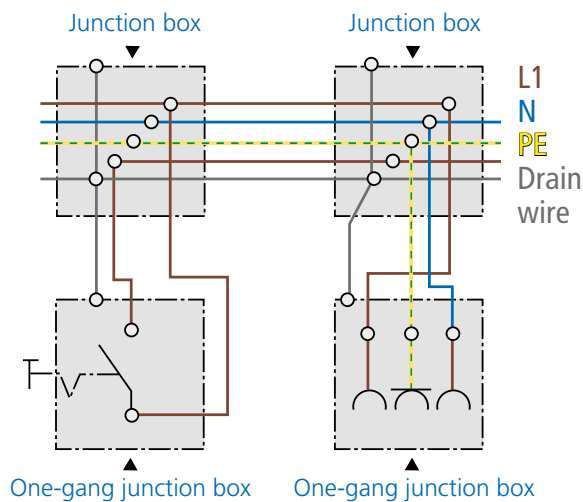

Remove cable sheath and screen with AMZ 2 (Art. No. 1190-02). Fit bare tracer wire with transparent insulating hose.

Connect functional earth of the box to tracer wires of screened cable.

One-gang junction box is ready for installation of a socket for biological design.

Technical processing instructions/standards

- dimensions in accordance with German DIN 49073
- for rooms used for medical purposes, environmentally-friendly construction, etc.
- the conductive coating suppresses interference with a high alternating field component, whether radiated or received
- The functional earth of the box must only be connected to the potential equalisation and not to the equipment grounding conductor (PE conductor)
- Not suitable for use in X-ray or radiation rooms!

Screened one-gang junction box

- with screening and functional earth of the box
- dimensions in accordance with German DIN 49073
- protection class IP 2X

Depth	63 mm
Screw spacing	60 mm
Cable entries 3 x 2.5 mm ² or 5 x 1.5 mm ²	6

Inner packaging/shipping	10 / 100

Screened cover

- for making screened one-gang junction boxes
- for one-gang junction boxes Art. No. 9064-88 and Art. No. 1555-88

Diameter	80 mm
Screw spacing	60 mm
Art.-No.	1164-88
Inner packaging/shipping	10 / 100

Screened junction casing

- for cavity wall and flush-mounting installation
- with screened cover
- With Ø 3.2 x 15 mm cover screws
- Protection class IP 3X

Length x Width x Depth	107 x 107 x 53 mm
Cut hole Ø	4 x 35 mm
Break-out openings Ø 20 mm	8
Cable entries for NYM and low-voltage cabling	Yes
For terminals up to	4 mm ²
Art.-No.	9195-88
Inner packaging/shipping	1 / 10

Note

Other installation boxes/housings with screening available on request. Please use our radiation protection box in X-ray areas or areas with ionising radiation.

Plaster-free installation with KLEMMFIX®

The KLEMMFIX® system saves up to 50% installation time compared to the conventional installation of flush-mounting boxes with plaster. KLEMMFIX® fixes the box securely in the wall before plastering and holds it in position. No plaster, quick cement or similar is required. You no longer need to clean your tools after use. The possible health hazard caused by the use of chemicals is avoided. Storage conditions such as frost, heat, shelf life, etc. do not have to be taken into account either.

- For fitting boxes without plaster
- For all common bricks such as lime sand brick, cellular concrete, lightweight concrete, vertically perforated bricks with and without filling
- Secure, clean and time-saving
- Alignment and secure mounting even before plastering
- Can also be used at sub-zero temperatures
- By plastering the wall and allowing the plaster to penetrate into the lamella ring around the box, the box is finally and permanently fixed.
- Not applicable when using clay or thin plaster

Examples of use

Vertically perforated bricks with and without filling, solid bricks.

Light concrete.

Cellular concrete.

Lime sand brick.

Processing instructions

Fastening with lamellar ring and clamping ribs on several levels for secure fixation in all common bricks.

Depth stop to ensure minimum plaster thickness.

Designed for precisely fitting use with the KAISER flush-mounted boxes.

The plaster penetrates up to the lamellar ring and thus ensures that the box is securely and permanently fixed.

Installation

Make the installation opening \varnothing 82 mm with the diamond grinding crown (Art. No. 1088-02).

Push in box with KLEMMFIX® latched on.

Fit signal cover (Art. No. 1181-60).

The fine marker bristles of the signal cover indicate the exact position of the one-gang box after plastering.

Proof of stability:

Tests carried out show that all boxes remain unchanged. Long-term use in practice confirms this result. Deviations in plastering material and application of the plaster have no effect.

KLEMMFIX® for one-gang and one-gang junction boxes

- for the pre-fixing of flush-mounting boxes without plaster
- in openings made with a diamond grinding crown \varnothing 82 mm
- can be used with the UP-PLUS one-gang boxes 1055/1056-04 and one-gang junction boxes 1555/1556-04 as well as with the air-tight flush-mounting ECON® 10 1055/1056-21 one-gang boxes and ECON® 15 1555/1556-21 one-gang junction boxes

Junction casings

Flush-mounting junction casings in all sizes and for almost any kind of jobs. This programme features practical housing sizes as well as robust housing design perfect for building sites.

- As central junction casings for star-shaped cable laying
- Easy to rewire when changing the way rooms are used
- With separator walls to separate electrical circuits
- For installation of DIN terminal strips, TS 35 standard rails for terminal blocks, LSA+ terminal strips and much more
- End cover with screw fastening for VDE-compliant installation

Processing instructions

Space for installation of TS 35 standard rails for the installation of terminal blocks, terminal installation devices etc.

Space for installation of LSA+ terminals for distribution of telecommunication equipment.

Several electrical circuits can be safely separated in one casing using separator walls that can be inserted.

After breaking out a side wall, the casings (Art. No. 1092-90) can be clipped together and expanded to twice the size.

Junction casing 80

- for max. 2 circuits using separator wall
- suitable for installation of DIN terminal strips, TS 35 standard rails for terminal strips, terminal blocks up to 16 mm², etc.
- including cover

Universal installation housings

for flush-mounting installation

Universal installation housings

Universal installation housings for a wide range of device installations always ensure optimum installation space for all kinds of devices. The intelligent housing design of all six housings ensures stability and secure hold in the wall.

- For displays, LED lights and much more
- For installing almost all shapes and sizes
- Mineral fibreboard allows individual installation opening

Examples of use

Installation

Make an appropriate wall opening, feed the cables and conduits into the housing and fasten it (using plaster) in the wall.

You can create the installation opening before or after inserting the housing. The equipment is attached by simply clamping it in or screwing it into the mineral fibreboard.

Use only screws that go into but not through the mineral fibreboard when attaching the device! (e.g. SPAX countersunk head screw 3.5 x 15 mm)!

Note

Observe the maximum stroke length of the saw blade when sawing the installation opening.

Universal installation housing with mineral fibreboard

- two-part, consisting of a housing and a mineral fibreboard cover
- all-round groove indicates the maximum opening size

My housing. Made just for me!

You manufacture modern operating elements for building technology, or sensitive control panels for industrial equipment? For concrete, masonry or cavity walls?

We have the housing solution that you need!

- A high-quality, flexible, plastic housing.
- Developed on the basis of our many years of experience in plastics technology.
- Whatever dimensions your product has, we will create the best possible shape!
- Look for yourself – it couldn't be easier!

Configure the housing you need the configurator on our website makes it possible: www.myhousing.eu

Interior Insulation box

One-gang junction box for electrical installations in internal insulation systems. For permanently secure and heat-bridge-free installation of switches, sockets and other devices in internally insulated exterior walls. For optimal room climate with proven protection from moisture damage. For use in many internal insulation systems.

- For installation in insulated interior walls
- Guarantees installation without heat bridges
- Moisture regulating and insulating
- Prevention of moisture induced structural damage
- Suitable for use in many insulation systems
- For insulation thicknesses 30 to 100 mm
- Installation on masonry without plaster

Examples of use

Historically significant facades in exposed masonry or stucco facades.

Facade of a listed half-timbered house.

Suitable for e.g. diffusion-open insulation systems made of mineral insulation materials.

Can be used in existing masonry with different insulation thicknesses.

Specially developed for expert installation in diffusion-open internal insulation systems.

1 Masonry wall | **2** Adhesive | **3** Insulating board | **4** Reinforcement plaster | **5** Reinforcement fabric | **6** Reinforcement plaster | **7** Finish coat of plaster, decorative plaster

Technical information

Airtightness:

- Maintains the level of airtightness
- No air through-flow possible
- Air flow behind the insulation system is prevented
- No convection
- No entry of mould spores

Heat insulation:

- No heat bridge
- Room heat enters the box not the cold wall
- Insulation component replaces function of the insulation system

Moisture regulation:

- Room-side moisture (caused by bad ventilation, many people in the room) is stored
- Moisture is dispersed in a targeted way
- No corrosion on the accessory terminals

Heat conductivity:

- Highly heat-conductive plastic for the inner box
- Room heat is transferred to the box
- The raised surface temperature prevents the formation of condensate

Proof of functionality

A comprehensive components test carried out by the TU Dresden – Institut für Bauklimatik – confirms demonstrably the functionality of the KAISER internal insulation box. The study of internal insulation systems with $\lambda > 0.03/\text{mK}$ in insulation thicknesses from 30 to 100 mm confirms that by using the new internal insulation box, hygrothermic damage can be excluded. The certificate can be downloaded as a pdf file from our website.

Processing instructions

Installation on masonry without using plaster or mortar.

Dimension details on the adapter allow easy adaptation to the insulation thickness.

The box allows 4 cables up to $\varnothing 11.5$ mm to be entered.

Cut exact and air-tight cable entry using a drill.

Creation of combinations

Combination of boxes by simply snapping the adapters into place.

Combination distance 71 mm by removing the premarked Edge.

Fully insulated through-wiring via support connector (Art. No. 9060-88).

Example of installation of a double socket

Assignment table for making entry openings

HSS drill		Ø setting
NYM cable	3 x 1.5 mm ²	8.0
	5 x 1.5 mm ²	9.5
	3 x 2.5 mm ²	9.5

Universal opening cutter		Ø setting
Support connector	9060-88	14
Conduits	M16	17

Installation

Determine insulation thickness, adjust fastening lugs of the Adapter.

For insulation thicknesses < 100mm, cut wall opening (Ø 82mm).

Define location on the wall and mark it.

Insert cable on rear side of adapter, fix adapter to the wall.

Insert cables into box, screw box to Adapter.

Strip cable, insert signal cover.

Apply the internal insulation around the box.

Remove signal cover and install required accessory.

Interior Insulation box

- One-gang junction box for insulated interior walls
- including attachment adapter
- rear cable entries
- circumferential airtight sealing lip
- Can be combined with each other

Universal equipment carrier

Universal equipment carrier for securely attaching electrical installations in or to heat-insulating external facades. Stable attachment of external lights, sockets, motion detectors, external temperature sensors, radio receivers, anemometers, cameras, letter boxes and much more.

- Secure attachment of various equipment to or in insulated external facades.
- Prevents heat bridges
- Quick installation with snap-in connections
- For insulation thicknesses of 60 to 360 mm

Examples of use

Processing instructions

Weight-bearing load dependent on the insulation thickness. The universal equipment carrier is only suitable for vertical installation (upright)!

1 External insulation - insulation thickness | 2 Permissible load

Heat bridge calculation

Temp. in °C

not insulated insulated

+ 20 °C - 10 °C

When the equipment carrier is correctly installed, hardly any heat losses are measured.

Calculation and source:
PASSIV HAUS INSTITUT
Dr. W. Feist

[mm]	insulated [m ²]	not insulated [m ²]
160	0.027	0.300
360	0.039	0.520

Installation

Align the housing base vertically on the wall and screw tight using suitable fixing material.

If necessary, adjust the extension element to suit the insulation thickness.

Fit the rock wool provided. (supplied)

Fit the mounting plate (closing clip underneath) and close.

Universal equipment carrier

- for use with externally-insulated walls
- for secure fixing of lights, intercoms, motion detectors etc.
- can be extended in steps of 100 mm each (max. 360 mm) using extension elements Art. No. 1159-27
- can be reduced in 10 mm steps
- With pre-cut rock wool parts through which the equipment carrier can be fed

Product-Data

Length x Width x Height	220 x 100 x 60-160 mm
Combination conduit entries M20/25	6
Halogen-free	Yes
 650 °C / S	Yes / Yes
Art.-No.	1159-24
Inner packaging/shipping	- / 5

Extension element

- to extend the Universal equipment carrier by 100 mm simply by latching on
- can be reduced in 10 mm steps by cutting
- with rock wool pre-cut parts to fill the extension panel

Length x Width x Depth	220 x 100 x 100 mm
Halogen-free	Yes
Art.-No.	1159-27

Universal equipment carrier with combination insert

Universal equipment carrier with combination insert for the installation of entryphones and installation accessories on the insulated external facade. The perfect basis for intercoms, sockets, switches and much more, and also for two-unit and three-unit combinations.

- Guarantees installation without heat bridges
- For entryphones and variable accessory installation combinations of 1 to 3 units
- For future expansion without damaging the external facade
- For insulation thicknesses up to 360 mm

Examples of use

The product is suitable for single, double or triple combinations...

...and also permits future expansion without damage to the facade.

The equipment carrier with combination insert can be...

...mounted horizontally or vertically.

Heat bridge calculation

If installed correctly, heat losses are hardly measurable. Calculation and source: inside: +20°C, outside: -10°C | PASSIV HAUS INSTITUT Dr. W. Feist

1 not insulated | 2 insulated

Installation

Define location on the wall and mark it.

Screw the housing base to the wall.

If necessary, adjust the extension element to suit the insulation thickness.

Attach the extension element and snap it into place.

Fit the rock wool insulation (supplied).

Position the combination insert (mounting clip at bottom) and snap into place.

The installation can now be fitted and installed.

After applying the plaster, attach the desired accessory.

Universal equipment carrier with combination insert

- for use with externally-insulated walls
- For secure mounting of intercoms, switches, sockets and many more
- Can be extended in steps of 100 mm using extension element
- With pre-cut rock wool parts through which the equipment carrier can be fed

System equipment carrier

The system equipment carrier is designed to fit perfectly into the external insulation and, in this way, reliably prevents heat bridges. Fast, easy fixing using the screw dowels included in the scope of delivery permanently anchors the equipment carrier securely to many surfaces. Ideal for stable fixing of external lamps, sockets, door intercom devices, and many more. In doing so, high weight-bearing loads are not a problem.

- Extra-fast, easy installation
- Two product types allow a wide range of applications
- Heat bridges are efficiently prevented
- Adaptable to insulation thickness in 10 mm steps – no cutting necessary
- Modular design for insulation thicknesses from 160 to 310 mm

Application examples

The system equipment carrier with combination is suitable for 1-way...

...2-way and 3-way combinations. Unused one-gang boxes can be used for future extensions without damaging the facade.

The system equipment carrier as a equipment carrier can be used as a cable exit...

...for mounting luminaires and other accessories.

Heat bridge calculation

A heat bridge calculation carried out by the Passivhaus Institut in Darmstadt shows that the system equipment carrier has a point-specific heat bridge loss coefficient of $xWB < 0,01 \text{ W/K}$ and meets the requirements of a heat bridge-free facade.

Weight-bearing loads

1 Weight-bearing loads – independently of the insulation thickness: For an overhang of 160 mm and insulation thicknesses of 160 - 310 mm; 8 kg without additional screwing of the front plate; 10 kg with additional screwing of the front plate. The system equipment carrier must be fitted vertically. The hole for the dowel must be drilled to make an exact fit. **2** Increasing the weight-bearing loads: To fix heavier loads, we recommend additional securing of the mounting plate by means of four Ø 3.5 x 25 screws

Versatile in use

The choice of two front parts and the modular design make the system equipment carrier a product that is extremely versatile in use. Cutting to size is not necessary because of adaptation to the insulation in 10 mm steps. Fixing by means of a single screw dowel reduces fitting time to a minimum, and at the same time, it ensures secure anchoring to the base, e.g. masonry, concrete or wood materials.

1 Basic element | **2** Intermediate elements | **3** Housing base | **4** Front plate | **5** Screw-in wall-plug

Installation

Masonry with conduit exit.

Adapt equipment carrier to insulation thickness by selecting suitable components.

Cut \varnothing 8 mm drill hole at least 50 mm deep.

Remove the side lugs from the screw dowel. Note the different lengths!

The dowel screw must protrude from the basic element by at least 40 mm.

Hold the equipment carrier against the wall, align it, and fix it using the dowel.

Press the conduit into the sidewall guide and cut it to length.

Latch on the required front part. Fit the Styrofoam cap and the dowel cover.

Tips and tricks

For an additional conduit, remove the bridges next to the Neopor® parts...

... and the perforated entry broken out in the case of the dowel cover

For air-tight installation, fit a suitable air-tight sleeve to the conduit exit side...

...and fit a sealing plug to the conduit.

Combinations with front panels

Multi-device front panel (Art. No. 9966.31 and 9966.32); opening \varnothing 1 x 68 mm.

2-way and 3-way combinations can be made by breaking out the covers.

Delivery status (Art. No. 9966.21 and 9966.22), universal mounting plate.

Universal mounting plate with broken-out exit for luminaires.

System equipment carrier 160 – 240 mm

- Adaptation to insulation thickness possible in 10 mm steps
- Including 2 screw dowels
- Material: Polyethylene
- Insulation material: Neopor
- Processing temperature: - 5 °C / + 60 °C

Installation housing ThermoX® Iso +

Installation housing for the secure and heat-bridge-free installation of rigid and swivelling built-in LED luminaires or other installation accessories in insulated ceilings. The housing protects the surrounding insulation material against the high operating temperatures of the LED luminaire and protects the LED luminaire itself against dirt. The integrated insulation element reliably prevents heat bridges.

- For the installation of luminaires and installation accessories in insulated ceilings
- Suitable for all standard insulation materials
- Thermally-protected installation space
- The integrated insulation element prevents heat bridges
- For insulation thicknesses from 100 mm to 160 mm (170 mm to 350 mm with extension element)
- Adjustment to the insulation thickness in 10 mm steps.
- Installation diameter up to \varnothing 86 mm

Awarded with the
BAKA-Award 2019

Examples of use

Buildings are constructed heat-bridge-free using the ETICS composite thermal insulation systems, e.g. ...

...insulated external ceilings of built-over terraces with lighting.

...insulated, recessed entrance areas with lighting.

...insulated facades with outdoor lighting over the entrance and garage door.

Heat-bridge calculation / temperature profile

A heat bridge calculation by the Passivhaus Institut, Darmstadt, shows that heat bridges can be reliably prevented by the installation housing for the external insulation. The installation housing is also suitable for use in passive houses.

Installation

Adapt installation housing to the measured insulation thickness.

Mark fixing point 55 mm from the luminaire centre point.

Alternative: Position the installation housing with the alignment markings for the luminaire and mark the drill hole.

Break out the conduit entry or cut an exact cable entry for air-tight installation, e.g. by using the KAISER universal opening cutter (Art. No. 1085-80).

Screw installation housing to the ceiling and fit the screw covering.

Insert the conduit or cable into the installation housing; fit sealing plug to the conduit.

Ceiling exit \varnothing 68 mm for knocking in, ceiling outlet up to \varnothing 86 mm for cutting out.

Applying insulation and plaster. Fitting the LED installation spotlight with plenty of space for the ballast device.

Processing instructions

Universal front part for installation diameter of \varnothing 68 mm for knocking in or universal up to \varnothing 86 mm for cutting out (turn by 180°).

Installation depth 70 mm (insulation thickness 100 mm).

Installation depth 100 mm (insulation thickness 130 mm).

Installation depth 130 mm (insulation thickness 160 mm).

Installation housing ThermoX® Iso +

- with external insulation of ceilings
- for insulation thicknesses of 100 mm and above
- Adjustment to the insulation thickness in 10 mm steps.
- for LED luminaires up to 8 Watt
- max. luminaire installation depth 70 mm to 130 mm (insulation thickness less 30 mm)
- Front panel with ceiling exit (CE) Ø 68 mm or universal up to Ø 86 mm
- Space for ballast devices 120 mm x 30 mm x 28 mm (installation diameter 68 mm, installation depth 70 mm)

3D animation

Product-Data

Length x Width x Height	220 x 110 x 160 mm
Insulation thickness	100 - 160 mm
Ceiling exit (CE) Ø	68 - 86 mm
max. lamp output	8 Watt
max. installation depth for the LED luminaires	70 - 130 mm
Cable or conduit entries up to max. ø 25 mm	5
Halogen-free	Yes
Art.-No.	1159-70
Inner packaging/shipping	- / 6

Extension element

- for installation housing for external insulation
- for insulation thicknesses 170 - 350 mm
- Adjustment to the insulation thickness in 10 mm steps.

Length x Width x Height	220 x 110 x 190 mm
Insulation thickness in combination with Art. No. 1159-70	170 - 350 mm
Halogen-free	Yes
Art.-No.	1159-71

Telescope equipment carrier and switch box

For the safe installation of luminaires, motion detectors and many other accessories in and on insulated facades. Optimised for the latest insulation thicknesses, the telescopic products permit a wide range of applications in external faces with insulation thicknesses from 80 to 200 mm. The two conduit entries on the basic carrier guarantee secure conduit connection. The cable routing which is integrated in the carrier arm ensures a fast, easy cable pull-in.

- Stable fit to walls and ceilings
- For insulation thicknesses from 80 to 200 mm
- Equipment carriers for accessories up to max. 5 kg
- One-gang boxes can be combined with a standardised 71 mm combination distance
- Conduit entries on the carrier with internal cable routing
- Integrated indicated dimension allows easy cutting off to insulation thickness
- Front fixing and depth stop prevent incorrect installation
- Front fixing of the mounting plate/one-gang box

FLUSH-MOUNTING

CAVITY WALL

CONCRETE

HOUSINGS

Examples of use

FIRE PROTECTION

PLUGGABLE

Heat bridge calculation / weight-bearing load

A heat bridge analysis produced by the Passivhaus Institut Dr. Feist, Darmstadt, showed that heat conductivity is only changed to a negligible extent and consequently it is demonstrated that no heat bridges result. When the space between the basic carrier and mounting plate / one-gang box is filled with insulating material, the loss coefficient „x WB“ for the telescope equipment carrier is 0.0085 W/K, and 0.0077 W/K for the telescope switch box.

When fitting an equipment carrier to a wall, ensure that the cable entries are positioned vertically.

CONNECTIVITY

CABLE GLANDS

TOOLS

SERVICE

Installing the basic carrier

Prepare the cable routes. Try to avoid direct cable routing through masonry and insulation.

The internal cable routing can easily be broken off to permit cable routing from the rear.

Saw the carrier to the required length. The integrated dimension ensures exact reading of the dimension.

Slotted holes allow precise alignment even when the drill holes are not exact.

Installing the equipment carrier

Push the one-gang box onto the supporting arm as far as the stop.

The front fixing and the depth stop always ensure exact fitting and prevent incorrect installation.

Side fixings allow the secure positioning of several equipment carriers next to each other...

...and stable installation for accessories when the attachment points are far apart.

Installing the one-gang box

Push the one-gang box onto the supporting arm as far as the stop.

The front fixing and the depth stop always ensure exact fitting and prevent incorrect installation.

For multiple combinations, cut out the side separator walls and connect the one-gang boxes.

For multiple combinations, cut out the side separator walls and connect the one-gang boxes.

Product advantages

Dimensions shown on the carrier ensure that the carrier length can easily be sawn off to match the insulation thickness – no need for measuring!

Slotted holes allow precise alignment even when the drill holes are not exact.

The two conduit entries on the carrier guarantee secure conduit support. The integrated cable routing ensures fast, easy cable insertion.

Luminaires and many other accessories are easily fitted in the mounting plate through the plaster using screws up to 4 mm Ø.

Telescope equipment carrier

- for secure installation of luminaires and much more
- for use with external insulation of walls and ceilings
- installation area for dowel-free installation of accessories

3D animation

Mini equipment carrier

Mini equipment carrier for later attachment of a variety of accessories to insulated and already plastered composite thermal insulation systems (ETICS). Luminaires, motion detectors, external sensors etc. can be permanently attached easily, quickly, securely and without creating heat bridges.

- For retrofitting in insulated facades
- Exact flush aligning of attachment devices
- Guarantees installation without heat bridges
- 4 swivels for secure anchoring
- No moisture penetration

Examples of use

The small mini device carriers are concealed by luminaires and smaller accessories.

Secure attachment of motion detectors.

Invisible even when close to edges.

Secure, easy fitting of the corner mounting.

Heat bridge calculation

A heat bridge analysis produced by the Passivhaus Institut Dr. Feist, Darmstadt, showed that heat conductivity is only changed to a negligible extent and consequently it is demonstrated that there are no heat bridges in the electrical installation. The loss coefficient „x WB“ is 0.000054 W/K.

Maximum pull-out force for the mini equipment carrier.

1 External insulation - insulation thickness

Structure of an organic ETICS

The mini equipment carrier was developed especially for later installation in organic composite thermal insulation systems (ETICS).

1 Masonry wall | 2 Adhesive | 3 Insulating board | 4 Reinforcement plaster | 5 Reinforcement fabric | 6 Reinforcement plaster | 7 Finish coat of plaster, decorative plaster

Technical information

The swivels anchor the KAISER mini equipment carrier in the insulation.

Clamping ribs, sealing lip and holding ring provide additional stability.

The adjustable screw-on surface accommodates a tolerance of up to 10 mm.

The screw-on surface is concealed even when the attachment points are close to the edge.

Installation

The two-piece mini equipment carrier can be anchored securely in the insulated external facade in a few simple steps.

Create installation openings of Ø 20 mm with SPECIAL cutter with depth stop (Art. No. 1088-06).

Release the cutter head and remove the drilled core.

Press the anchor sleeve of the mini equipment carrier into the installation opening so that it is flush with the wall.

Press in the attachment core until it locks into the anchor sleeve.

Pressing in the attachment core anchors the swivels in the insulation material and provides a secure fit for the mini equipment carrier.

The mini equipment carriers now provide stable and wall-flush screw-on surfaces...

...and provide a tolerance compensation of up to 10 mm. This permits later exact alignment of all installation accessories.

The luminaire is securely and permanently flush-mounted to the wall.

Mini equipment carrier

- Retrofitting in existing composite thermal insulation systems (ETICS)
- consisting of anchor sleeve and attachment core
- for insulation thicknesses of 80 mm and upwards
- Screw-on surface with 10 mm tolerance compensation
- 4 swivel cutters
- 2 ribs
- Sealing lip on all sides
- Weight loading up to 30 N (3 kg)
- equipment attached with self-tapping screws with Ø of 3.2 - 4 mm

One-gang junction box ECON® Styro55

One-gang junction box ECON® Styro55 for later attachment of a wide range of installation accessories to insulated and pre-plastered composite thermal insulation systems (ETICS). Switches, sockets, intercoms etc. can be permanently attached easily, quickly, securely and without heat bridges.

- For retrofitting in insulated facades
- Cutter system prevents damage to cables
- Guarantees installation without heat bridges
- 4 swivels for secure anchoring
- No moisture penetration

Examples of use

Secure attachment to a ETICS without adhesive.

Accessory installation without disrupting the insulation or creating heat bridges.

Secure and flush-mounting installation including multiple combinations.

Heat bridge calculation

A heat bridge analysis produced by the Passivhaus Institut Dr. Feist, Darmstadt, showed that heat conductivity is only changed to a negligible extent and consequently it is demonstrated that no heat bridges result. The loss coefficient „x WB“ is 0.005044 W/K.

Technical information

Tool-free and wind-tight cable entry prevents air draughts along the cable.

The swivels anchor the box securely in the insulation material. The ribs at the front also give the box additional support.

The lip at the back forms a sealing barrier to the insulation material and prevents air draughts along the box.

The all-round sealing lip seals the ETICS, so no moisture can penetrate.

Installation with an existing cable

Ensure that the cable was fed through the insulation material panel. Shorten the existing cable to approximately 10 cm.

Fasten the KAISER centering aid Ø 68 mm (Art. No. 1090-68) to the composite thermal insulation system using steel nails.

Using SPECIAL cutter (Art. No. 1088-07), cut the installation opening precisely as far as the depth stop.

Remove the drilled core from the opening.

The opening is now only as deep as necessary. The insulation remains intact and the cable is undamaged.

The ECON® technology elastic sealing membrane ensures a wind-tight seal around the cable as it is pushed through.

Simply insert the ECON® Styro55 one-gang junction box in the installation opening.

Press the box in the holding ring until the rim is flush with the wall.

Use KAISER tool (Art. No. 1090-22) to position the four swivels in the catch mechanism.

Flush-mounting and secure fit of the one-gang box.

Using the KAISER stripping pliers, (Art. No. 1190-02), remove the insulation from the cable.

The swivel sheaths on the box seat themselves securely in the insulation material.

Installation of combinations

Using the combined cutting aids (Art. No. 1090-68), cut installation openings at the standard spacing of 71 mm.

Before inserting the support connector, remove the strap without using a tool.

Fully-insulated through-wiring is accomplished using the KAISER support connector (Art. No. 9060-88).

Secure and permanent attachment of multi-gang combinations, intercoms and much more.

One-gang junction box ECON® Styro 55

- Retrofitting in existing composite thermal insulation systems (ETICS)
- for insulation thicknesses of 80 mm and upwards
- 4 swivel cutters
- Clamping ribs
- Sealing lip on all sides
- including setting tool (Art. No.1090-22) per packaging unit

One-gang junction box - ECON® Iso +

The ECON® Iso + one-gang junction box is the solution for electrical installation work in wood fibre insulation boards. Four swivels, specially designed for use in solid heat insulation and plaster base boards, ensure secure anchoring – also for retrofitting! The ECON® technology elastic sealing membrane guarantees air tightness and allows the toolless insertion of conduits or cables. This means that switches, sockets, intercoms and many more can be installed permanently and securely and heat bridge-free.

3 times awarded in 2019:

B+B Bauen im Bestand
Produkt des Jahres 2019
Sieger in der Kategorie Energetische Sanierung

- Air-tight and heat bridge-free electrical installation in accordance with DIN 18015-5
- Suitable for pressure-resistant insulation panels of 60 mm thickness and greater
- 4 swivels for secure mechanical anchoring
- Making of combinations is possible

Examples of use

Ecological wall insulation in old and new buildings in both wood and solid constructions.

Suitable for mounting in pressure-resistant wood fibre insulation boards with a medium gross density of 110 - 180 kg/m³.

Retrofitting is possible. For retrofitting on the plastered wall, fit the box without a mounting frame.

User-friendly mounting of the installation of accessories - also in combination - possible.

Processing instructions

Mounting in an unplastered insulation panel – use a mounting frame.

Mounting in a plastered insulation panel is possible, even with an existing cable.

The membrane which seals the swivel guarantees air-tightness.

Plenty of entry options using ECON® technology for conduits and cables.

Mounting on unplastered insulation panel

Cut the Ø 68 mm installation opening using a suitable cutter (e. g. Art. No. 1082-30; countersink hole cutter and ejector spring must be removed).

Fit mounting frame, then feed the cable or conduit through the airtight membrane and into the box.

Using gentle pressure, insert the setting tool (Art. No. 1090-22) into the box as far as the stop. The swivels much expand completely.

Before plastering, fit the signal cover (Art. No. 1181-60). Protects the interior of the box, the screw domes and the screw heads.

Mounting on plastered insulation panel in a combination

Using SPECIAL cutter (Art. No. 1088-07) and two centering aids (Art. No. 1090-68), cut two installation openings at least 55 mm deep and with a diameter of 68 mm.

The ECON® technology sealing membrane wraps itself air-tight round the cable during insertion.

Through-wiring takes place after removal of the opening tabs and fitting of the support connector.

Installation of various installation accessories is possible – including in combinations.

One-gang junction box - ECON® Iso +

- Sealing lip on all sides
- 4 swivel cutters
- 4 screw domes
- with 2 device screws +/-
- including centering aid
- including setting tool (Art. No. 1090-22) per packaging unit

Cavity wall installation

Cavity wall basis installation

- Complete system for all cavity wall applications
- FX quick-assembly technology FX⁴ for time-saving installation
- Universal installation housing with mineral fibreboard for all common unit sizes (e.g. displays, LED luminaires, etc.)
- Halogen-free product range

Air-tight cavity wall installation

- Air-tight installation as per GEG
- ECON[®] technology for air-tight, toolless cable and conduit entries
- Air-tight sleeves for the air-tight feed-through of cables and conduits
- ECON[®] Fix: rib fastening in different wall material combinations without lugs
- ECON[®] Data for the connection and installation of data and network cables

Special cavity wall solutions

- HWD fire-protection boxes for **fire-protection walls** and ceilings, as well as shipbuilding walls
- Safe, visible and certified protection without filling and lubrication through the use of KAISER bulkhead systems for cables and conduits
- Sound insulation boxes for insertion into **sound insulation walls**
- Radiation protection one-gang boxes for insertion into leaded and lead-free **radiation-protection walls**
- Clean room boxes for use in clean rooms in a medical environment or in hygienic areas
- Damp room boxes for professional installation in sealed interior rooms
- International products for accessory installation according to national standards

see chapter **TOOLS**
from page 376

SERVICE

Plus-minus device screw

The screw allows the installer to fit screws and devices screws with the same screwdriver. In addition, the new screw drive can be used with many other components, e. g. switches, sockets, terminal blocks etc. Optimal shape for +/- or PZ1 screwdrivers, and at the same time a slot screwdriver up to max. 4mm width can be used. A closed long-slot ensures that the blade does not slip out.

Processing instructions

Device screw with extra-flat countersunk head for low installation height.

Combination drive Pozidriv1/ slot provides the best grip.

Suitable for fitting using cordless screwdriver.

Optimal for fitting with +/- screwdriver.

FX⁴ technology - the fastest means of screw attachment

FX⁴ technology provides the fastest-ever screw fixing for cavity wall boxes and installation housings. The special thread shape enables up to 40% quicker mounting with simultaneous high self-locking effect.

- 40% quicker mounting
- High self-locking effect
- In cavity wall boxes and installation housings

Processing instructions

The screws with the steep thread design and the 3-part thread reduce installation time by up to 40%.

Standard screw.

KAISER standard.

Example of use for universal housing.

Example of use of EnoX®.

Cavity wall installation boxes

The new KAISER cavity wall installation boxes with proven mounting lug technology and improved product features. A practical design and a large selection of cable and conduit entries allow a large number of applications. Additional boxes for installation in thinly boarded walls or solid wood walls complete the wide range. VDE certification documents the high level of quality.

- Screws ensure permanent fixing
- Entries can be broken out for cables and conduits
- Combinable and through-wiring by using support connectors
- Fixing of devices by means of pre-mounted device screws

Processing instructions

New boxes provide a large number of entry options.

Marking of the openings simplifies the assignment of the correct diameter.

Combination entry for cable and conduits up to max. Ø 25 mm.

Specific openings can be made simply by breaking out.

Bending of the conduit up to 90° is easily possible in the case of slim wall constructions or in the installation level.

Cable and conduit retention prevents slipping-out of live parts.

Standardised round support connector for fast installation.

Easy-to-fit device fixing thanks to new +/- screw.

Technical processing instructions / Standards

- in accordance with DIN EN 60670
- Standardised combination distance 71 mm
- fully-insulated through-wiring in combinations of one-gang boxes and one-gang junction boxes for switches and sockets possible
- with holding ring
- break-out openings for sheathed cabling, low-voltage wires and DIN EN conduits
- integrated retention of NYM cables in accordance with DIN 60670/DIN 49073, self-locking of the conduits
- can also be used as junction box in accordance with DIN EN 60670

O-range® one-gang box for thin boardings

A new one-gang box is now available in the O-range® programme for walls with thin boarding or small cavity: thanks to its installation depth of just 35 mm and the zero clamping technology, which ensures a permanently firm hold, it is particularly suitable for walls with little space or thin wall thickness.

- With zero tension technology for thin boarding
- Low installation depth of 35 mm
- Cable entries with integrated cable retention
- Device screws with flat countersunk head
- For cables up to Ø 11.5 mm

Application examples

The box is particularly suitable for walls with limited space or thin wall thickness.

In addition, the use in container...

...or shipbuilding possible.

The special zero clamping technology for a clamping range of 0.2 to 30 mm ensures a permanently firm hold.

O-range® one-gang box for thin boardings

- for walls with a small cavity from 35 mm
- for thin boarding

Electronics box

Cavity wall electronics box for switching units, electronic components, cables and terminals in cavity walls. The box can be subdivided and combined, so it offers a wide range of usage options.

- For different voltage types by using the associated separator wall
- Integrating radio or EIB actuators
- With a cover that can be wallpapered and filled
- Can be combined with each other as well as with one-gang boxes and one-gang junction boxes

Application examples

The cover can be fitted flush with the wall for wallpapering over...

...or turned 180° for filling. This will reduce any possible switching sounds.

Network connection boxes can be used while maintaining the cable bending radii and with the best possible data transfer speeds.

The electronics box offers a generous installation space for the decentralised installation of small window actuators for controlling blinds and heating, for example.

Electronics box

- air-tight version with additional sealing lip
- Tunnel twin-chamber box with enclosed separator wall and cover that can be wallpapered over.
- for accessory inserts and electronic components, such as EIB actuators, communication technology, radio control elements, alarm modules, etc.
- with holding ring

Air-tight cavity wall installation

Air-tight O-range® cavity wall boxes with ECON® technology for energy-efficient electrical installation according to GEG. The elastic ECON® technology sealing membrane allows air-tight electrical installation.

- Elastic sealing membrane for guaranteed air-tightness
- Innovative clamp technology with integrated cable retention
- Toolless cable and conduit entry
- Air-tight combined with support connector

Technical information

As a key component of the new German Building Energy Saving Ordinance (GEG), the energy performance certificate is a prerequisite for both commercial and residential properties. It creates more transparency for both buyers and tenants regarding the energy efficiency of a property. This factor is set to become more important in the real estate industry, not only for new build projects but also for renovation projects (existing housing).

Thermographic photographs highlight the thermal losses, which occur in conventional electrical installations.

With the help of various test procedures such as thermographic photographs, the blower-door-test and thermo anemometer measurements, we and various neutral institutions have proven the level of air tightness achieved by KAISER installation systems.

Especially in cavity wall construction, an air-tight building shell, guaranteed largely through the moisture barrier foil, plays an important role in complying with permissible energy values. Each conventional installation opening breaks this air-tight shell and results in uncontrolled artificial currents, which often weaken other energy saving measures significantly.

Average heat energy consumption in houses with a living surface area of 100 m²

House type	"Normal house" (housing)	Low-energy house	Passive house	Zero-heating energy house	Energy-autonomous house (special case)
Fuel oil consumption	approx. 2200 l/year	approx. 850 l/year	approx. 180 l/year	approx. 0 l/year	approx. 0 l/year
Use of energy	187 kW h/m ² a	73 kW h/m ² a	15 kW h/m ² a	8.3 kW h/m ² a	0 kW h/m ² a

Air-tight one-gang boxes, one-gang junction boxes, accessories for cavity wall installation

Processing instructions

"The certificates can be downloaded as PDF files from our website, or can be requested from our technical consultancy department."

The ECON® technology elastic sealing membrane fits itself around the conduit or cable during piercing. This prevents uncontrolled air flows.

The flexible and tool-free insertion of the conduit or cable significantly simplifies the process and reduces installation time.

Reinforcement around the opening prevents tearing of the membrane.

Easy opening of the conduit entry by means of pre-defined opening tab.

Permanently air-tight conduit entry up to conduit size M25.

The conduit can be angled in the entry by up to 90°...

...which is ideal for use in slim wall constructions and installation levels.

The marking of the entry openings simplifies the correct choice of opening size.

Easy-to-fit device fixing thanks to new +/- screw.

The support connector ensures the air-tight combination of the cavity wall boxes and is inserted via the removable metal plates without the use of tools.

O-range ECON® 63 one-gang box

- Air-tight design with sealing membranes
- Fully insulated, air-tight through-wiring for combinations using support connectors
- Toolless cable or conduit entries
- Integrated cable retention of NYM cables, self-locking of conduits

O-range ECON® 2 / 3 / 4 - gang junction boxes

With the new O-range ECON® 2 / 3 / 4 - gang junction boxes, KAISER offers the perfect basis and especially easy processing for the fitting of all standard installation accessories in multiple combinations. Thanks to their large installation opening without a central separation, it is easy to wire multiple devices together and even makes possible the use of pre-wired installation accessories. If different electrical circuits – e. g. for supply and communication connections – are used within a combination, the individual accessory installation spaces can be separated easily and in a standardised way.

- Easy installation of pre-wired accessories without spatial separation
- Maximum flexibility when fixing accessories, generous tolerance compensation
- Standardised separation of individual installation openings using a bridge
- Complete assembly and installation with just one screwdriver
- Can be combined with all O-range® programme applications

Application examples

The O-range ECON® 2 / 3 / 4 - gang junction boxes...

...allow, thanks to their large installation opening without a separator, the use of pre-wired installation accessories.

By inserting the separator, different voltage types can be installed in accordance with standards.

O-range ECON® 2 one-gang junction box in a 3-way combination with the O-range ECON® Data (Art. No. 9280-22).

Installation instructions

Mark the centre of the upper installation opening in accordance with DIN 18015-3 and the centre of the other installation openings with 71 mm spacing.

Make Ø 68 mm installation openings with countersinking by using a KAISER cutter (e. g. PROFIL Art. No. 1081-10).

The individual installation openings must now be connected for the insertion of the multiple -gang junction boxes and chamfered for the countersinking.

To ensure a perfect seat for the box, always keep to the dimensions shown in the diagram.

O-range ECON® 2 one-gang junction box

- Air-tight design with sealing membranes
- Toolless cable and conduit entries
- Integrated cable retention of the NYM cable, self-locking of the conduit
- Standardised separation of individual installation openings using a bridge
- Can be combined with all O-range® programme applications

O-range® separator

- for O-range ECON® 2 / 3 / 4 - gang junction box

Art.-No.	5000
Inner packaging/shipping	10 / 100

Conduit one-gang junction box O-range ECON®

Air-tight one-gang junction box with ECON® technology especially for installation with electrical installation conduit. The box is VDE-certified and suitable for energy-efficient electrical installation acc. to GEG. 4 entries are optimal for continuous conduit installation e. g. in prefabricated house construction or with data networks. Extremely easy fitting thanks to toolless conduit insertion with opening tab. The sealing membrane guarantees permanent air-tightness and at the same time retention of the conduit.

- Installation in Ø 68 mm cut hole
- Elastic sealing membrane for guaranteed air-tightness
- Toolless conduit entry
- Can be combined with support connectors, air-tight and fully-insulated

Processing instructions

Easy opening of the conduit entry by means of the opening tab – without any tearing of the membrane.

Air-tight conduit entry up to conduit size M25.

Bending of the conduit up to 90° is easily possible in the case of slim wall constructions or in the installation level.

Air-tight and fully-insulated combination using support connector (Art. No. 9060-98).

O-range ECON® conduit one-gang junction box

- Air-tight design with sealing membranes
- fully-insulated through-wiring for combinations of one-gang junction boxes with support connectors
- toolless conduit entries

Junction box 120 mm air-tight

Air-tight Ø 120 mm junction box with ECON® technology for an energy-efficient electrical installation in accordance with GEG. Extremely easy fitting thanks to toolless cable and conduit entry. The sealing membranes guarantee permanent air-tightness and at the same time retention of the cable or conduit. The large box volume provides plenty of installation space for various cable connections.

- Installation in Ø 120 mm cut hole
- Elastic sealing membrane for guaranteed air-tightness
- Toolless cable and conduit entry

NEW

O-range ECON® air-tight IP 30 850 °C **INNOVATION**

Processing instructions

Cut installation opening with Ø 120 mm BASIC cutter (Art. No. 1084-20).

Elastic sealing membrane allows toolless cable and conduit entries in air-tight version.

Fitting of fixing adapter for connection terminals on top-hat rail.

For separation of 2 electrical circuits, use separator wall (Art. No. 9073-20).

Junction box Ø 120 mm O-range ECON®

NEW

- Air-tight design with sealing membranes
- for 2 electrical circuits through separator wall 9073-20
- receptacle for TS 35 standard rail
- with stable holding ring
- Cutting the installation opening with BASIC cutter 1084-20 or VARIOCUT 1089-00
- including cover and screws

Installation housing O-range ECON® Universal 120

With the new O-range ECON® Universal 120 installation housing, KAISER offers maximum flexibility on the construction site. In addition to the wiring for an entire room unit, the installation of various accessories or installation accessories is also possible. If necessary, the universal fastening and screw-on surface can be opened to the desired extent, thus ensuring clean installation of recessed luminaires, smoke detectors and much more. Particularly easy to install thanks to tool-free cable and conduit entries. The sealing membranes guarantee permanent air tightness and thus energy-efficient electrical installation in accordance with the Building Energy Act (GEG).

- Universal screw-on surface for clean mounting of attachments without drilling or dowelling
- For creating individual installation openings up to Ø 100 mm
- Complete assembly and installation with just one screwdriver
- Toolless cable and conduit entry
- Installation in Ø 120 mm cut hole

NEW

Mounting as a installation housing

Cut installation opening Ø 120 mm with KAISER BASIC cutter (Art. No. 1084-20).

Chamfer the installation opening for mounting flush with the ceiling or wall using a cutter knife.

Insert the connection line through the elastic sealing membrane without tools.

Fasten the universal screw-on surface using the two device screws.

Putty over the assembled installation housing with commercially available filler.

Create a round installation opening (max. Ø 100 mm) using a KAISER cutter...

...or a square installation opening (max. 75 x 75 mm), e.g. with a fretsaw.

Connection and installation of a built-in luminaire (up to max. 50 mm installation depth).

Universal installation housings

for cavity wall installation

Installation notes

When creating the installation opening, pay attention to the cutting depth to ensure not to damage the cable material in the installation housing!

When attaching the device to the installation housing, use only screws that go into but not right through the screw-on surface (e.g. screw with half-round head 3.5 x 15 mm)!

When filling the suspended ceiling, the signal cover (Art. No. 1281-31 /-32 /-33) protects the wiring and the interior of the housing.

Design freedom for creative, modern lighting systems in the wall and the ceiling.

Installation housing O-range ECON® Universal 120

NEW

- With universal screw-on surface for mounting accessories and installation accessories
- For individual round and cornered installation openings
- Air-tight design with sealing membranes
- Toolless cable or conduit entries
- Integrated cable retention of NYM cables, self-locking of conduits

One-gang junction box O-range ECON® Fix

With the new O-range ECON® Fix junction box, installation is significantly faster and easier thanks to the latchless clamping ribs for fastening in various wall material combinations such as OSB boards, gypsum fibre boards or even in exposed masonry. Circumferential sealing lamellas on two levels guarantee that the airtight level is maintained. The centring bars enable convenient mounting of the device junction box in the installation opening without canting. PLUG - ALIGN - CLAMP - READY!

- Clamping rib fastening for different solid wall constructions
- Circumferential sealing lamellas on 2 levels to maintain the airtight level
- 4 screw domes for maximum flexibility for accessory fitting
- Toolless cable and conduit entry
- Device screws with plus-minus drive

Examples of use

Wall construction OSB board with plasterboard.

Wall construction OSB board with Mdf.

Wall construction Gypsum fibreboard.*

Exposed brickwork.

Note

O-range ECON® Fix junction boxes are suitable for secure fixing in multi-layer wall structures, such as OSB boards in conjunction with gypsum plasterboards (GKB), in walls made of cross laminated timber, glulam, solid wood walls as well as in single-layer wall structures made of gypsum fibre boards (GF) according to DIN EN 15283-2. They can also be used for installations in exposed brickwork.* For installation in wall structures consisting exclusively of plasterboard (GKB) in accordance with DIN 18180 or cement-bonded mineral fibre boards in accordance with DIN EN 12467, the O-range® product range with lug fastening is the appropriate solution.

Air-tight one-gang boxes, one-gang junction boxes, accessories for cavity wall installation

Setting tool O-range ECON® Fix

- For quick and safe installation of the O-range ECON® Fix junction box (Art. No. 9264-12 / 9264-72)
- Also suitable for easy alignment of most Kaiser cavity wall boxes with a cut hole diameter of 68 mm, such as Art. No. 9063-XX, 9064-XX, 9263-XX, 9264-XX, etc. (not suitable for e.g. Art. No. 9268-XX, 9280-XX)

Art.-No.	1090-12
Inner packaging/shipping	10 / 100

Electronics box O-range ECON® Flex

Air-tight O-range ECON® Flex electronics box with ECON® technology for energy-efficient electrical installation in accordance with GEG. Fast installation is ideal for modernising or extending existing systems. The flexible tunnel makes it easy to install, and creates space for electronic components, cable reserves and terminals.

- Additional sideway terminal compartment for communications and network technology
- Elastic sealing membrane for guaranteed air-tightness
- Toolless cable and conduit entry
- Integrated cable retention
- Can be combined with support connectors, air-tight and fully-insulated

Examples of use

Combination with ECON® cavity wall boxes is possible.

Additional space for connection terminals.

Accepts electronic components e.g. actuators.

Space for cable reserves.

Electronics box O-range ECON® Flex

- for accessories and electronic components
- Air-tight design with sealing membranes
- Elastic tunnel
- Combinable with ECON® one-gang junction boxes

One-gang connection box O-range ECON® Data

With the new O-range ECON® Data one-gang connection box, KAISER offers unprecedented ease of installation for the fitting and connection of communication and network connection boxes. The innovative cable entries for data and network cables are positioned in such a way that it is very easy to maintain the bending radii specified by the cable manufacturer. This prevents kinks in the cable, and ensures optimal data transfer. Whether you are fitting a network connection box or a Keystone module, the new O-range ECON® Data always provides optimal cable routing.

- Innovative cable entries prevent kinks in the cables
- 4 screw domes for maximum flexibility for accessory fitting
- Toolless cable and conduit entry
- Complete assembly and installation with just one screwdriver
- Can be combined with all O-range® programme applications

Application examples

Thanks to optimally-positioned cable entries, Keystone modules can quickly and easily be fitted - no kinks in the cable! - inside the O-range ECON® Data one-gang junction box...

...push the data and network cables into the lightweight wall's cavity.

The O-range ECON® Data one-gang connection box also offers easy cable feeding to the accessory for the fitting of network connection boxes...

...in order to fit the cable reserve in the lightweight wall's cavity.

The large number of different cable and conduit entries allows the installation of media converters...

...in which supply is always by means of NYM cables and installation conduits up to Ø 25 mm - so the connection is always the right one.

For conventional electrical installation work, and in addition to combinability with all applications in the O-range® programme, the O-range ECON® Data one-gang connection box...

...also offers plenty of space for convenient fitting of multiple connection terminals.

Installation of Keystone modules

Make Ø 68 mm installation opening with countersinking using a KAISER cutter (e. g. PROFI with Art. No. 1081-10).

Toolless insertion of data and network cables through the elastic sealing membrane.

Insert the O-range ECON® Data one-gang connection box into the installation opening, use the centre marking for alignment, and tighten the lug screws.

Feed the data and network cables back into the lightweight wall's cavity and fix the accessory by means of the device screws.

Installation of network junction boxes

Toolless insertion of data and network cables through the cable entries in the elastic sealing membrane.

For box installation, insert the cables from the outside into the membrane so that the box can be put into the installation opening.

Put the O-range ECON® Data accessory connection box into the installation opening, align it by means of the centre marking, and tighten the lug screws.

Feed the data and network cables back into the cavity of the lightweight wall. Fix the installation accessory in position by means of the device screws.

One-gang connection box O-range ECON® Data

- for network, coaxial, NYM and communication lines
- 4 screw domes
- Air-tight design with sealing membranes
- Toolless cable or conduit entries
- integrated NYM cable retention, self-locking of the communication cables and conduits
- Can be combined with all O-range® programme applications

NEW

One-gang junction box for solid wood

The new one-gang junction box for solid wood (CLT) makes installation in solid wood walls much quicker, easier and more efficient thanks to lug-free rib fastening. Thanks to the innovative cable entries, which enable toolless installation, even out-of-direction drill holes for cable routing in the CLT element can be effortlessly levelled out and guarantee clean installation in the installation opening, even in visible wood quality. The centring bars and the centre markings on the holding ring and on the first row of ribs enable precise and convenient alignment of the one-gang junction box in the installation opening without tilting.

- Clamping rib fastening for installation in solid wood walls / CLT
- Innovative cable entries enable maximum tolerance compensation for out-of-direction drill holes for the cable route
- Four screw domes for maximum flexibility for accessory fitting
- Eight toolless cable entries
- Device screws with plus-minus drive

INNOVATION

Application examples

Ideally suited for installation in solid wood elements with visible wood quality.

For directly opposing installation in walls from 120 mm overall thickness.

Fully insulated connection for two- to five-fold box combinations by means of support connectors (Art. No. 9060-88).

Firm hold thanks to the rib fastening, even with subsequent boarding (e.g. gypsum plasterboard).

Processing instructions

For installation openings \varnothing 74 mm, for multiple combinations at the standardised centre distance of 71 mm.

Toolless cable entries up to \varnothing 11.5 mm.

The innovative cable entries ideally compensate for out-of-direction drill holes and ensure an optimum cable connection to the box.

The box is simply pressed into the \varnothing 74 mm installation opening of the solid wood wall using the setting tool (Art. No. 1090-12).

Installation

Create the exact installation opening \varnothing 74 mm, for multiple combinations at the standardised centre distance of 71 mm.

Open the toolless cable entries and insert the cables up to \varnothing 11.5 mm.

Align the box for exact positioning using the centre markings on the holding ring and on the first row of ribs.

When installing the box, the cables press into the membrane from the outside so that the box can be guided into the installation opening.

The box is simply pressed into the \varnothing 74 mm installation opening of the solid wood wall using the setting tool (Art. No. 1090-12).

For fully insulated connection in multiple combinations, the support connector (Art. No. 9060-88) is inserted into the open cable entry.

The connecting cables are then fed through the support connector.

Fasten the installation accessory using the device screws.

One-gang junction box for solid wood / CLT

NEW

- Rib fastening for installation in cross-laminated timber or laminated timber walls or in solid wood panels
- Innovative cable entries positioned on the side of the box circumference
- 4 screw domes
- Toolless opening of the cable entries using an opening tab
- Fully insulated through-wiring for combinations using support connectors
- including setting tool (Art.No.1090-12) per packaging unit

90° wall and ceiling transitions

NEW

The new KAISER 90° wall and ceiling transitions for prefabricated house and modular construction guarantee an air-tight component seal at transition points and solve the problem of protruding electrical installation conduits. This ensures smooth transport of the wall elements or modules to the construction site and eliminates the additional work step of sealing the transition point on site. The innovative transitions for front or rear installation of the empty conduit system in serial production ensure flexible cable pull-in from both directions. The 90° bend and clean catch mechanism to the wall connection element prevent abutting edges. Thanks to its multi-part design, it can be optimally integrated into modern production processes.

- For airtight connection of electrical installation conduits at transition points
- Flexible cable pull-in from both directions thanks to 90° bend without abutting edges
- Universally applicable in different wall structures
- No damage to the cables
- Ensuring the continuous empty conduit installation
- No time-consuming and cost-intensive reworking on the construction site

Application examples

No protruding conduits and therefore convenient transport to the construction site.

The electrical installation conduit can be connected easily and air-tight on the construction site (e.g. above the unfinished floor).

The new 90° wall and ceiling transitions have an optimised radius without abutting edges, thus allowing cables to be pulled in flexibly.

Pre-assembled sub-assemblies enable optimum integration into modern production processes.

Processing instructions

The wall connection element can be used on both sides for 90° bends and electrical conduit.

Peripheral sealing ribs clamp the wall connection element permanently air-tight and secure in the wall boarding.

No abutting edges thanks to a clean transition from the electrical installation conduit to the 90° bend.

The clean and defined conduit transition at transition points prevents time-consuming and costly reworking steps on the construction site.

Installation in open wall unit

Machine creation of the exact installation opening of Ø 38 mm.

Fixing the wall connection element through the peripheral sealing ribs in the wall boarding.

Attach the 90° bend to the electrical installation conduit and...

...snap into the already mounted wall connection element.

Installation in closed wall element

Machine creation of the exact installation opening of Ø 38 mm.

The protruding electrical installation conduit is inserted into the conduit holder of the 90° bend up to the depth stop and locked in place.

After attaching the wall connection element, the wall and ceiling transition is guided 90° through the installation opening back into the wall element...

...and firmly clamped in the wall boarding.

90° wall and ceiling transition

NEW

- Two-part design with secure catch mechanism
- Air-tight component closure for front and rear installation in the boarding of wall elements or modules
- Flexible cable pull-in from both directions thanks to 90° bend without abutting edges
- Wall connection element can be used on both sides for 90° bends and electrical conduit
- Flat collar for a firm and flush fit in the wall element

Sealing sleeves

The KAISER range of sealing sleeves offers perfect sealing for all standard cable and conduit sizes, both indoors and outdoors. The range consists of single and double sleeves for one or two cables or conduits respectively, and of two multiple air-tight sleeves for up to six cables or conduits. The self-adhesive KAISER sealing sleeves can be fitted without the need for any tools. Talcum is applied to the sleeves before they leave the factory. They ensure easy cable or conduit feed-through, and fast processing on the building site. In contrast to the conventional improvised method, KAISER sealing sleeves guarantee the permanent air-tight sealing of installation penetrations.

- For cables Ø 4 - 15 mm and conduits Ø 15 - 110 mm
- Large contact area to cables and conduits
- Anti-kink sleeve also permanently seals very kinked cables
- Completely toolless wall installation
- Extremely good adhesion

Applications for sealing sleeves

1 Sealing of a ventilation conduit through the vapour or moisture barrier | **2** Sealing of more than one cable through the vapour or moisture barrier | **3** Sealings in plastered walls | **4** Sealings in the cellar area | **5** Sealings in flat roof areas | **6** Sealing of the cellar ceiling or the foundation baseplate

Air-tight sleeve

Fleece-butyl sealing sleeve

Aluminium butyl sealing sleeve

Examples of use

Air-tight sleeve

Air-tight sleeve for sealing conduit and cable entries in the interior of air-tight building shells.

- extremely strong adhesion
- For guaranteed air-tight feed-throughs, especially in the attic
- 12 types for different conduit and cable diameters
- Suitable for moisture barrier foils, sarking membranes, OSB boards *

Examples of use

Processing instructions

Air-tight conduit entries can be made cleanly and easily by using the self-adhesive KAISER air-tight sleeves. The sleeves create faster, more stable and, above all, more air-tight transitions than improvised methods. Please ensure that the base is dry and free from dust and grease. Processing should be carried out at a temperature higher than -5°C, and full adhesive strength is achieved after 24 hours. The sleeves have an unlimited shelf life when stored cool and dry at room temperature. * For fibreboard, we recommend a pre-coat using primer

Air-tight sleeves for cables and conduits

- Continuous sealing by means of air-tight layers for penetration of cables
- extremely strong adhesion
- Temperature resistance -30°C to +80°C, in the feed-through area up to +120°C
- UV-resistant, halogen-free

Multiple air-tight sleeves ECON®

Cable and conduit sleeve ECON® for reliable sealing of up to 6 cable or conduit entries through the air-tight building shell - ideal for digital satellite units.

- Flexible sealing of 1 to 6 cables or conduits
- Low space requirement, powerful adhesion
- Completely toolless wall installation
- Sealing even when cables are extremely kinked
- Unused entries are reserved for later installations

Examples of use

Connection of a digital satellite receiver unit.

4 coaxial cables are connected here for reception.

The mast which supports the parabolic mirror must also be incorporated in the equipotential bonding.

The cables are fed through the building's air-tight seal. This entry must be permanently sealed air-tight.

Installation

ECON® technology's toolless cable or conduit entry offers maximum ease of installation and permits fast processing.

Before the sleeve can be glued in position, make sure that the surface is free of dust. Then remove the protective foil,...

...glue the sleeve in position and thoroughly smooth it onto the surface, working from the inside to the outside.

The sleeves guarantee permanent sealing of entries, even when cables are extremely kinked. Retrofitting is easy.

Product advantages

Sealing sleeves

Reliable sealing of installation feed-throughs

Cable-sleeve ECON®

- 1-piece
- extremely strong adhesion

Fleece-butyl sealing sleeves

For permanent, secure sealing of installation penetrations in masonry, concrete or wood materials, etc. The highly-elastic sleeves are fitted with fleece-butyl flanges as plaster bases and provide maximum adhesion. Some surfaces must be pre-treated with KAISER primer.

- Permanently moisture-proof - for use indoors and outdoors
- The fleece sleeve can be plastered over, and is for use in plastered walls and behind composite thermal insulation systems
- Waterproofing effect with non-pressing water, e.g. against soil moisture

Installation

If necessary, pre-treat the base, pull the sleeve over the cable/conduit...

...remove the protective foil and press the sleeve into position.

The adhesive flange can be plastered over and ensures permanent sealing of the masonry penetration.

Note

To ensure secure adhesion of all KAISER air-tight sleeves, the bases must be free of dust and grease, and also dry and load-bearing. In particular, mineral and organic bases such as stone, concrete, plasterboard or fibreboard must be pre-treated with KAISER primer.

Fleece-butyl sealing sleeves

Aluminium-butyl sealing sleeves

For permanent, secure sealing of installation penetrations through masonry, concrete or wooden materials. The highly-elastic sleeves are fitted with non-tear aluminium butyl adhesive flanges and provide maximum adhesion. Some surfaces must be pre-treated with KAISER primer.

- Permanently moisture-proof - for use indoors and outdoors
- Water-sealing effect with non-pressing water up to 0.02 bar
- Especially suitable for sealing in the cellar socle
- Large contact area to cables and conduits
- Anti-kink sleeve also permanently seals very kinked cables
- Completely toolless wall installation
- Extremely good adhesion

Installation

Pre-treat mineral bases and fibreboards with primer.

Pull the sleeve over the cable/conduit and remove the protective foil.

Press the adhesive flange of the sleeve firmly into position.

Aluminium-butyl sealing sleeves

- For cables Ø 4 - 15 mm and conduits Ø 15 - 110 mm
- pressing water up to 0.02 bar
- adhesive
- 1-piece

KAISER primer

KAISER primer is a high-quality, solvent-free coating which optimises adhesion for all KAISER sealing sleeves on absorbent, mineral surfaces, for example masonry, concrete, plasterboard or wood materials. The self-adhesive primer is water and heat resistant. It can also be used on Styrofoam, EPS or XPS etc.

Installation

The base must be dry and free of grease, oil and dust. Stir the primer thoroughly before working. Apply smoothly (apply twice to porous surfaces).

Before pressing the adhesive flange on, allow the primer to air until transparent. Thickened primer can be thinned with water.

KAISER primer

- The self-adhesive primer is water and heat resistant. It can also be used on Styrofoam, EPS, XPS etc.

Inner packaging/shipping	- / 1

Sound insulation value R_w up to **77 dB**

Sound-insulation box

Sound insulation box for use in walls with increased demands on sound protection. The solid box body with additional sound insulation sheathing absorbs and reflects sound, which prevents disturbances in adjacent rooms. Sound insulation is the same as if no installation boxes were installed.

- Maintains the wall's sound insulation protection
- Also for retrofitting
- Installation up to 5-unit combinations
- Also for opposing installation
- Can be used with sound protection cover as a junction box

Examples of use

Example of installation of a switch/socket combination.

Use of an opposing sound insulation box.

Use of a sound insulation box on one side of a double combination.

The sound insulation box can be used in up to five opposing combinations without weakening the sound insulation characteristics of the wall.

Comparison of sound insulation

Lightweight wall (2-shell, each triple-boarded) with sound insulation one-gang junction boxes.

1 Wall, without installations, 77 dB | **2** Sound insulation box 9069-01, single, with accessory, 77 dB | **3** Sound insulation box 9069-01, single, with cover, 77 dB | **4** Sound insulation box 9069-01, 5-way, with accessory, 77 dB | **5** Wall, without installations, 78 dB | **6** with sound insulation electronics box, 9069-94, 78 dB

Sound-insulation box

- One-gang junction box for sound insulation walls in buildings
- Combination distance of 71 mm through single separation of the pre-embossed edge

Sound insulation electronics box

Sound insulation electronics box for use in walls with increased demands on sound insulation. The sound insulation electronics box maintains the wall's sound insulation function and creates space for electronic switching devices, data boxes, cables and terminals. The electronics box makes possible population with cables and installation conduits up to M25.

- Maintains the wall's sound insulation protection
- Retrofitting is possible
- Also for use as a double box
- Extra-large terminal area for communications and network technology
- Additional space for electronic components (KNX actuators, relays, radio module, communications technology)

Examples of use

The electronics box provides space for all possible installations e.g. KNX actuators, Venetian blinds relays, alarm modules and many more.

Also ideal for network connections. The generous box volume offers sufficient space for cable reserves.

The electronics box can also be used as a double box, e.g. for switch and socket combinations.

The electronics box can easily be combined with the sound insulation device junction box.

Sound insulation electronics box

- Electronics box for sound insulation walls in buildings
- Also for use as a double box
- For equipment inserts and electronic components
- Can be combined with each other and also with a sound insulation one-gang junction box

Sound-insulation box 68

Thanks to their solid box body in combination with the sound-absorbing surface on the base of the box, sound insulation 68 one-gang and one-gang junction boxes guarantee the wall's sound insulation. This function is completely maintained even with directly opposing installation. The easy opening process and the 68 mm installation opening ensure fast mounting and also easy retrofitting in existing electrical installations.

- Maintains the wall's sound insulation protection
- Also for retrofitting
- For Ø 68 mm installation openings
- For a directly opposing installation
- Easy entry for cables up to Ø 11.5 mm and conduits up to Ø M25

Sound insulation value R_w up to **69 dB**

Examples of use

For sound insulation walls with a sound insulation value of up to 69 dB.

Also for directly opposing installation up to a 5-way combination.

Can be combined with one-gang and one-gang junction boxes.

With a sound insulation cover (Art. No. 1184-69), it can also be used as a junction box.

Comparison of sound insulation

Lightweight wall (2-layer, each triple-boarded)

1 Wall, without installations, 69 dB. | **2** Sound insulation box 9069-03, single, with accessory, 69 dB. | **3** Sound insulation box 9069-04, single, with accessory, 69 dB. | **4** The solid box body and the sound-absorbing surface on the base of the box guarantee sound insulation up to 69 dB. | **5** Sound-absorbing strips on the box edge to reduce structure-borne sound. | **6** Easy opening of the conduit entry by means of pre-defined opening tab.

One-gang box sound insulation 68

- for sound insulation walls
- also for directly opposing installation
- minimum wall thickness 100 mm
- can be combined with each other and with the one-gang junction box

Sound-insulation box 68 Flex

Thanks to its solid box body, in connection with the sound absorbing surface on the box base the Sound insulation 68 Flex electronics box guarantees the wall's sound insulation function. Additional insulating strips minimise body sound transfer via the component opening. Fast installation is ideal for modernising or extending existing systems. The flexible tunnel makes it easy to install, and creates space for electronic components, cable reserves and terminals.

- Maintains the wall's sound insulation protection
- For Ø 68 mm installation openings
- Additional sideway terminal compartment for communications and network technology
- Toolless cable and conduit entry
- Can be combined with support connectors, air-tight and fully-insulated

Sound insulation value R'_{w} up to **68 dB**

Examples of use

The combination with Sound insulation 68 one-gang and one-gang junction boxes is possible.

Additional space for connection terminals.

Accepts electronic components e.g. actuators.

Space for cable reserves.

Sound-insulation box 68 Flex

- for sound insulation walls
- for accessories and electronic components
- Air-tight design with sealing membranes
- Elastic tunnel

NEW

Clean room one-gang junction box

With the new cleanroom appliance junction box, KAISER offers the ideal solution for reliably maintaining tightness in the cleanroom. The one-gang junction box, tested at the Steinbeis Transfer Centre STZ EURO in Offenburg in accordance with VDI 2083 Sheet 19 prevents the transmission of airborne particles, viruses or gases and has the highest tightness class (tightness class 7) of the clean room. Thanks to the sealing lip under the holding ring and the cable entries that can be created precisely using the KAISER universal opening cutter, an uncontrolled exchange of air can be permanently prevented to protect against contamination. The safe solution - even after the requalification test!

- For use in clean rooms in a medical environment or in hygienic areas
- To protect personnel and products in cleanrooms from contamination of any kind (airborne particles, viruses or gases)
- For \varnothing 68 mm installation openings
- Complete assembly and installation with just one screwdriver

Processing instructions

Fully insulated through-wiring at the normative centre distance of 71 mm by means of support connectors (Art. No. 9060-78).

Up to 6 cable entries for sheathed cables with outer diameter up to max. \varnothing 11.5 mm.

Integrated cable retention of the NYM cables according to EN 60670.

The peripheral sealing lip prevents the exchange of air and airborne particles at the installation opening.

Installation

Create installation opening \varnothing 68 mm with KAISER cutter (e.g. EXPERT, Art. No. 1082-30).

Produce the precisely fitting cable entry (max. up to \varnothing 11.5 mm) using KAISER universal opening cutter (Art. No. 1085-80).

Insert the cables through the elastic sealing membrane and tighten the screws.

Secure the installation accessory with the device screws.

Verifications

Guaranteed safe maintenance of tightness in the cleanroom - with certificate.

Clean room one-gang junction box

NEW

INNOVATION

- For professional installation in clean room walls and functioning containments
- Certified according to VDI 2083 sheet 19 (tightness class 7, extended class 11)
- Airtight design with sealing membranes and peripheral sealing lip
- For cables up to max. Ø 11.5mm with integrated cable retention

Depth	62 mm
For panel thickness	7 - 40 mm
Cut hole Ø	68 mm
Screw spacing	60 mm
Cable entries of up to Ø 11.5 mm	6
Air-tight	Yes
Art.-No.	9264-32
Inner packaging/shipping	10 / 100

Safety for X-ray rooms. One-gang junction box for radiation protection walls.

KAISER's innovative radiation protection box protects against radiation used for medical purposes, e.g. in X-ray facilities. The high density of the radiation protection compound absorbs soft and hard X-rays. The box is especially suitable for lead-free radiation protection walls (e.g. Knauf Safeboard) and - because of its dose-reducing effect in the tube voltage range between 40 - 150 kV - guarantees a lead-equivalent value for the wall of up to 3 mm Pb even with opposing installation. In addition, the box can easily be used in lead-lined walls. In this case, the radiation protection box achieves a lead-equivalent value of 1.5 mm Pb with walls which are leadlined on one side.

- Protection against X-rays
- Suitable for lead-free radiation protection walls
- Lead-free - no health risks
- Retrofitting is possible
- Fast installation without additional screening measures
- Opposing installation is possible
- Maintains the wall's sound insulation protection

Examples of use

Example of installation of a switch/socket combination.

Installation of the radiation protection box in the wall.

Opposing use of the radiation protection box.

Use of the radiation protection box in a triple combination.

Allocation table for universal opening cutters

Cavity wall installation for radiation protection boxes		Ø setting
NYM cable	3 x 1.5 mm ²	9.5
	5 x 1.5 mm ²	10.5
	3 x 2.5 mm ²	9.5
Support connector	9060-74	Cut up to the marking of the connector entry

You can create cable entries with the specified strain relief easily and to the exact required size with the universal opening cutter (Art. No. 1085-80).

Radiation protection one-gang junction box

- One-gang junction box for radiation protection boxes in buildings
- Combination distance of 71 mm through single separation of the pre-embossed edge

- For fully insulated through-wiring in combinations
- for Art. No. 9074-01

Art.-No.	9060-74
Inner packaging/shipping	25 / 100

Radiation protection one-gang junction box for lead-lined radiation protection walls.

The KAISER radiation protection box for use in lead-lined walls protects against radiation used for medical purposes, e.g. in X-ray equipment. The radiation protection material with an integrated lead function component absorbs the dangerous X-ray radiation with a lead equivalent value of 2,5 mm Pb as effectively as 2,5 mm thick lead.

- Protection against X-rays
- For lead-lined radiation protection walls
- No health risks - no skin contact with lead function component
- Retrofitting is possible
- Fast installation without additional screening measures
- Maintains the wall's sound insulation protection

Examples of use

Example of installation of a switch/socket combination.

Using the radiation protection box in the wall.

Single-side use of the radiation protection box in a double combination.

Fitting a triple combination is also easy.

Cavity wall installation for radiation protection boxes	Ø setting	HSS drill Ø
NYM cable	3 x 1,5 mm ²	9,5
	5 x 1,5 mm ²	9,5
	3 x 2,5 mm ²	9,5
	5 x 2,5 mm ²	Connector
Support connector	9060-88	Cut up to the marking of the connector entry.

Making an exact-fitting cable entry with the specified cable retention is easy - just use an HSS drill together with the universal opening cutter (Art. No. 1085-80).

The matching drills and universal opening cutter settings are shown in the tables.

Radiation protection one-gang junction box

- One-gang junction box for lead-lined radiation protection walls in buildings
- Combination distance of 71 mm through single separation of the pre-embossed edge

3D animation

Product-Data

Depth	58,5 mm
For panel thickness	7 - 40 mm
Cut hole Ø	74 mm
Screw spacing	60 mm
Cable entries of up to Ø 11.5 mm	2
Support connectors for each package	3
Lead equivalent value [mm Pb]	2,5
Halogen-free	Yes
 VDE	Yes
Art.-No.	9074-03
Inner packaging/shipping	5 / 10

Support connector

- For fully insulated through-wiring in combinations
- For Art. Nos. 1159-90, 1555-51, 9069-03, 9069-04 and 9074-03

Art.-No.	9060-88
Inner packaging/shipping	25 / 100

Screened one-gang junction box

Screened one-gang junction box for cavity wall installation. The conductive coating suppresses interference with a high alternating field component, whether radiated or received.

- For environmentally-safe electrical installation, biological construction
- With screening and potential conductivity
- The functional earth of the box must only be connected to the potential equalisation and not to the equipment grounding conductor (PE conductor)

Installation

Remove cable sheath and screen with AMZ 2 (Art. No. 1190-02). Fit bare tracer wire with transparent insulating hose.

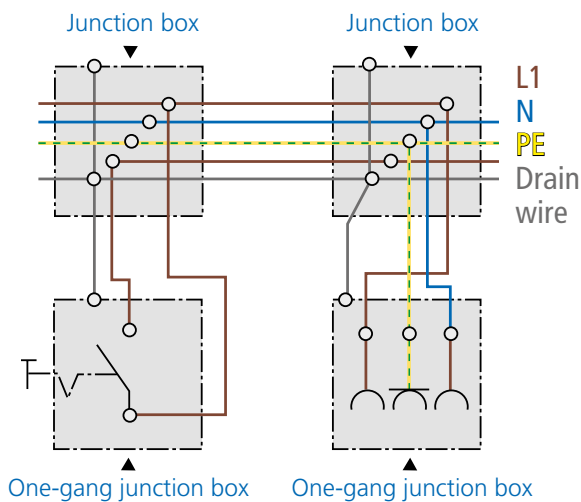

Connect functional earth of the box to tracer wires of screened cable.

As a junction box, connect the box cover's functional earth to the tracer wires of the cables.

Attach cover to box with device screws.

Technical processing instructions/standards

- dimensions in accordance with German DIN 49073
- for rooms used for medical purposes, environmentally-friendly construction, etc.
- the conductive coating suppresses interference with a high alternating field component, whether radiated or received
- The functional earth of the box must only be connected to the potential equalisation and not to the equipment grounding conductor (PE conductor)
- Not suitable for use in X-ray or radiation rooms!

Screened one-gang box / one-gang junction box

- with screening and potential downlead

Screened cover

- for making screened one-gang junction boxes
- for one-gang junction boxes Art. No. 9064-88 and Art. No. 1555-88

Diameter	80 mm
Screw spacing	60 mm
Art.-No.	1164-88
Inner packaging/shipping	10 / 100

Screened junction casing

- for cavity wall and flush-mounting installation
- with screened cover
- With Ø 3.2 x 15 mm cover screws
- Protection class IP 3X

Length x Width x Depth	107 x 107 x 53 mm
Cut hole Ø	4 x 35 mm
Break-out openings Ø 20 mm	8
Cable entries for NYM and low-voltage cabling	Yes
For terminals up to	4 mm ²
Art.-No.	9195-88
Inner packaging/shipping	1 / 10

Note

Other installation boxes/housings with screening available on request. Please use our radiation protection box in X-ray areas or areas with ionising radiation.

NEW

Damp room one-gang junction box

The new damp room one-gang junction box from KAISER provides optimum sealing for electrical installations in areas exposed to splash water, process water and cleaning water. Thanks to the 5 cm peripheral adhesive collar, the innovative, DIN 18534-tested and certified waterproof one-gang junction box can be easily integrated into the sealing layer (e.g. sealing slurry or sealing membranes) and maintains the protection target of the wall. Uncontrolled moisture exchange is permanently prevented thanks to the precisely fitting cable entries created using the KAISER universal opening cutter.

- For professional installation in sealed interior rooms, such as commercial kitchens, bathroom modules or damp rooms in hospitals
- Tested and certified watertightness in accordance with DIN 18534
- For installation openings \varnothing 68 mm
- Six air-tight and watertight cable entries
- Device screws with plus-minus drive

Application examples

The fleece-like structure of the peripheral adhesive collar enables problem-free sealing in sealing slurries...

...or conventional sealing membranes and thus fits seamlessly into the existing sealing system.

Waterproof one-gang junction box, mounted in a cement fibreboard, integrated into the sealing level with attached tiling.

To comply with the IP protection class, the plaster compensation ring (Art. No. 9155-61 or -62) can be fitted for > 10 mm wall coverings.

Processing instructions

Produce the exact fitting cable entry using KAISER universal opening cutter (Art. No. 1085-80).

Up to six cable entries for sheathed cables with external diameter up to max. \varnothing 11.5 mm.

By removing the backing film, the peripheral collar can be easily stuck to the wall surface.

Integrated cable retention of NYM cables according to DIN EN 60670.

Installation

Create the exact installation opening \varnothing 68 mm using the KAISER cutter EXPERT (Art. No. 1082-30).

Open the cable entries using the KAISER universal opening cutter (Art. No. 1085-99) and insert the cables up to \varnothing 11.5 mm.

Gradually remove the backing film, align the box in the installation opening and then spread the sleeve to bonding it to the wall surface.

Fastening of the box in the installation opening by means of lug fixing.

Application of the water-proofing layer (e.g. sealing slurry).

Application of the wall covering (e.g. tiling).

Fasten the installation accessory using the device screws.

To comply with the IP protection class, the plaster compensation ring (Art. No. 9155-61 or -62) can be fitted for $>$ 10 mm wall coverings.

Damp room one-gang junction box

NEW

INNOVATION

- Peripheral 5 cm wide adhesive collar to hold mineral sealing materials, e.g. sealing slurries
- Convenient sealing into the sealing layer thanks to the fleece-like surface structure of the sealing sleeve
- Tested and certified according to DIN 18534
- Air-tight and watertight design with sealing membranes for six cables up to max. \varnothing 11.5 mm with integrated cable retention
- Can be used with the KAISER plaster compensating rings (Art. No. 9155-61 or -62) with built-up wall coverings

Depth	62 mm
For panel thickness	7 - 40 mm
Cut hole \varnothing	68 mm
Screw spacing	60 mm
Cable entries of up to \varnothing 11.5 mm	6
Air-tight	Yes
Watertight acc. to DIN 18534	Yes

Junction casings and boxes

Junction casings in all sizes and for almost any kind of installations. This product range features practical housing sizes as well as a robust housing design which is perfect for building sites.

- As central junction casings for star-shaped cable laying
- Easy to rewire when changing the way rooms are used
- With separator walls for safe separation of electrical circuits
- Create precise wall openings using the drilling template supplied
- End cover with screw fastening for VDE-compliant installation

Installation

Stick drilling template (supplied) to wall. Open four corners with cutter. Cut out edges with cutter or fretsaw.

Cut out intermediate parts with cutter or fretsaw.

Break out pre-cut holes, feed in cables, insert casing and attach with the FX⁴-screws.

Fasten inserted box or casing with FX⁴ fast screw attachment.

Universal installation housings

Universal installation housings for a wide range of device installations always ensure optimum space for all kinds of devices. The intelligent housing design ensures stability and a secure fit in the wall.

- For displays, LED lights and much more
- For installing almost all shapes and sizes
- Mineral fibreboard allows individual installation opening
- With FX⁴ quick assembly technology

Installation

Mark installation opening and cut with a fretsaw.

Insert cables or conduits, feed housing into wall and install with FX⁴-quick-assembly technology.

Lightly smooth edges with filler (use plastic-based filler).

Cover with wallpaper etc. and install the required device.

Mounting instructions

Use only screws that go into but not through the mineral fibreboard when attaching the device (e.g. SPAX countersunk head screw 3.5 x 15 mm)!

Note

Observe the maximum stroke length of the saw blade when sawing the installation opening.

Halogen-free cavity wall boxes/fire resistance

All KAISER boxes and casings for cavity wall mounting as well as several accessory parts are available as halogen-free products.

- Fire-resistant up to 850°C.
- Heat-resistant up to 105°C.
- Electrically well-insulated, shock and pressure-resistant.
- There are no chemical reactions which cause the oxygen to be bound.
- No corrosive substances such as hydrochloric acid gas or hydrogen bromide are released.

The identifying feature of these products is that they are available in white.

Cavity wall boxes and casings with the VDE symbol have been tested for fire resistance in a glow wire test at 850°C in accordance with VDE 0471/DIN EN 60695-2-11. This test must demonstrate that a fire cannot start in the cavity wall boxes if a fault occurs in the electrical installation. In addition, always ensure compliance with the current fire prevention measures for wall constructions.

On-site mixed concrete

- Complete systems for on-site mixed concrete B¹
- Sophisticated colour system for easy assignment of system components
- Prefix® installation technology for simple, fast installation against the opposing formwork without a support element
- Central transition casings for feeding in electrical circuit distributors
- Wide range of fastening options on the formwork

International

- International products for accessory installation according to country-specific standards and requirements

Cable routing, conduit feeding and sealing systems

- Practical solutions for wall-ceiling transitions
- Safe, visible and certified protection through the use of KAISER sealing systems for cables and conduits, as well as cable and conduit bundles

Tools

- Professional system tools for fast, safe installation
- Extensive system accessories

Production methods for on-site mixed concrete

Concrete walls can be manufactured in upright (vertical) or flat (horizontal) formwork. Horizontal formwork has only one formwork side, while vertical formwork has two formwork sides: the working formwork and the opposing formwork.

Free-standing reinforcement is always used when formwork elements are still installed in other places and can only be set up later on.

Sliding or travelling formwork is used vertically for the production of structures with great heights and horizontally, e.g. for roadway pavements and concrete safety barriers.

The slow sliding or travelling of the formwork ensures a steady construction progress.

Installation in on-site mixed concrete

The KAISER concrete construction system for all concreting methods and types of construction. It offers an extensive programme with numerous wall and ceiling boxes as well as practical solutions for wall to ceiling transitions.

1 HaloX® 100 Multi-conduit entry | **2** B¹ universal ceiling exit | **3** HaloX® 250 with tunnel 325 for on-site mixed concrete, HaloX® 250 universal front part | **4** Formwork protection | **5** B¹ device connection socket | **6** HaloX® 100 for on-site mixed concrete, HaloX® 100 front part, square | **7** B¹ ceiling junction box | **8** HaloX® 180 with tunnel 190 for on-site mixed concrete, HaloX® 180 facing concrete front part | **9** B¹ large conduit one-gang junction box, B¹ Prefix® system wing set | **10** B¹ device connection socket | **11** Prefix® concrete building box | **12** Wall and ceiling transition 30°, B¹ Prefix® system wing set, B¹ Prefix® wall exit adapter Ø 25 mm | **13** Potential equalisation casing 16²

The KAISER colour system.

The different colours of the individual components make correct installations easier.

Green: Front parts for fixing to the formwork.

Yellow: Box and casing rear parts for wall installation.

Red: Box rear parts for ceiling installation.

Grey: Intermediate parts and attachment accessories.

Ways of attaching to various types of formwork

B¹ one-gang box and B¹ one-gang junction boxes

B¹, the new on-site mixed concrete range of products for electrical installation work. In addition to the tried-and-tested system features such as the flat front part, sturdy fixing domes and the support element slot with a sprung box base, the new B¹ range has innovative conduit entries, sturdy slots for the new B¹ Prefix[®] system wing range, and also bridges – which can be broken out later if required – for connecting accessories in combinations.

- Suitable for all types of formwork
- Slot for B¹ Prefix[®] system wing set
- Can be stably combined over the complete box body with a standardised combination distance of 71 mm
- Innovative conduit entries for fast processing on the construction site
- Signal bristles for easy location with installations on the opposing formwork side
- Larger mounting and installation space
- Installation of pre-wired installation accessories with multiple combinations, because the bridge can be broken out later

Fixing and alignment of the front part

Exact alignment by centre marking.

Fixing by means of steel nails.

Fixing by means of KAISER expanding dowels (Art. No. 1217-02).

Fixing by means of threaded dowels.

Combination in accordance with DIN

For multiple combinations, many of the B¹ wall applications can be combined in two directions at a standard combination distance of 71 mm (DIN 49075).

By using the 91 distance piece (Art. No. 1259-04), the combination distances for communication connections can be extended to 91 mm in 20 mm increments.

The B¹ one-gang box, B¹ one-gang junction box, B¹ large conduit one-gang junction box and the B¹ electronics box...

...can be connected stably and securely to both the front part and the box body.

The new conduit insertion technology

The required conduit connection opening can be easily and exactly broken out with a quick tilting movement using a standard pair of combination pliers,...

...for this purpose, the combination pliers are applied to the marked break-off edge for the required conduit size and broken out via a tilting movement.

Once all the required conduit entry openings have been created, the rear cover can be closed.

The conduit can now be inserted easily.

B¹ one-gang box

- with 4 screw domes and 2 expanding claw fields
- 2-piece with moulded rear part
- Two slots for B¹ Prefix[®] system wings
- Rear part of box with slot for support element
- Suitable for all types of formwork
- Standardised combination distance 71 mm

Markings for cables up to Ø 16 mm	6
Number of parts	2
Art.-No.	1248-03
Inner packaging/shipping	20 / 180

Note

According to DIN VDE 0100, Part 559, feed lines for wall lights must terminate in connection boxes. Wall light connection boxes must have at least one option for attaching wall lights. According to DIN VDE 60670, wall and ceiling luminaire connection boxes must provide enough room for 3 individual terminals or be fitted with a 3-pole connector.

Installation with the universal screw-on surface

B¹ Universal wall exit

B¹ Universal wall exit with Prefix® installation technology.

In addition, thanks to the universal screw-on surfaces, the complete installation can be done...

For wall lights, for example, only screws and a cordless screwdriver are needed.

One-gang box

- with 4 screw domes and 2 expanding claw fields
- suitable for all types of form-work
- combinations have fully-insulated cable transitions
- Standardised combination distance 71 mm

Depth	41 mm
Installation opening Ø	60 mm
Markings for cables and DIN EN conduits to Ø 16 mm	2
Number of parts	2
Art.-No.	1255-43
Inner packaging/shipping	10 / 100

One-gang boxes, One-gang junction boxes for on-site mixed concrete

Junction box

- cover screw distance 67 mm
- suitable for all types of form-work

B¹ Electronics box and B¹ two-gang junction box

The B¹ electronics box and B¹ two-gang junction box are especially suitable for installations in on-site mixed concrete vertical formwork. The B¹ electronics box provides plenty of space for accessory installations, and additional space for devices such as switch actuators or other components for smart home applications. The relevant separator wall allows the standardised installation of bus and operating voltages in a single box. B¹ Two-gang junction boxes allow the installation of block and pre-wired accessories, and provide space for the assembly of cable for multi-media connections.

- Plenty of space for accessories and cables
- Separator wall for the standardised incorporation of two voltage types
- Flat front part for fast, easy nailing
- Innovative conduit entries for fast processing on the construction site
- Slot for B¹ Prefix® system wing set
- Spring travel ensures secure fit in standing formwork

Examples of applications for the B¹ electronics box

By inserting the separator wall, two different voltage types can be fitted in a standardised way in the B¹ electronics box. In addition, they provide a generously-sized installation space...

...for the decentral installation of, for example, small window actuators for controlling Venetian blinds and heating in the external wall.

Thanks to the B¹ electronics box, it is easy to install radio-controlled actuators etc. without putting excessive strain on cables or accessories.

Network connection boxes can be used while maintaining the cable bending radii and with the best possible data transfer speeds.

Examples of applications for the B¹ two-gang junction box

Thanks to its large installation opening without a central bridge, the B¹ two-gang junction box allows...

...the use of pre-wired accessories, pre-wired block inserts and many more.

It also provides an easy-to-use basis for the installation of multi-media connection boxes. The very large installation compartment has plenty of space for configuring cables.

Reserve cables and connection plugs can easily be inserted into the box and are then concealed behind the installation accessories.

B¹ Electronics box and B¹ two-gang junction box for on-site mixed concrete

B¹ electronics box

- with separator wall for separating electrical circuits
- with 4 screw domes
- Suitable for all types of formwork
- 2-piece with moulded rear part
- Two slots for B¹ Prefix[®] system wings
- Rear part of box with slot for support element
- Standardised combination distance 71 mm

Distance piece 91

- for separate covers for antenna sockets in combinations with sockets without electric shock protection
- Centre distance 91 mm
- for multiple row combinations
- fits one-gang boxes, one-gang junction boxes, abutments

Length	60 mm
Art.-No.	1259-04
Inner packaging/shipping	10 / 100

B¹ Prefix® system wings

The B¹ Prefix® system wing allows fast, easy fixing to the reinforcement. This means optimal installation on the opposing formwork side and for free-standing reinforcement, and also for sliding or travelling formwork constructions. All wall applications in the new B¹ range have slots for the locking of two Prefix® system wings. This ensures fast, easy installation on the opposing formwork side.

- Fast and easy installation on opposing formwork without support element and abutment
- Holding in place using the Prefix® installation technology leaves both hands free for securing with tie wires
- A pronounced corrugated profile and additional fixing opportunities for secure fixing using tie wires
- Combinable when using wall and ceiling transitions
- For installation in exposed concrete, pressed against the front formwork
- Suitable for 20 - 60 mm concrete covers

Examples of use

Connect the B¹ Prefix® system wings to the slot of the B¹ one-gang box which you are installing.

During installation, the front side of the B¹ one-gang box must protrude from the wall thickness by between 5 and 20 mm. This ensures optimal pressure on the opposing formwork.

If the B¹ one-gang box is less than the required wall thickness: Turn the B¹ Prefix® system wing by 180°, connect it again to the B¹ one-gang box, pre-fix the box...

...to the reinforcement and, using both hands, secure to the reinforcement by means of tie wires.

B¹ Prefix® system wing bracket set

- Facilitates fixing to the reinforcement
- Pre-fixing by means of B¹ Prefix® installation technology
- Can be used for the following articles:
- B¹ device socket
- B¹ device connection socket
- B¹ large-conduit device connection socket
- B¹ electronics socket
- B¹ two-device connection socket
- B¹ wall light connection socket
- B¹ universal wall outlet
- B¹ Prefix® adapter - Ø 20, Ø 25 and Ø 32 mm

Junction casings and accessories

for on-site mixed concrete

Junction casings

Junction casings in all sizes and for almost any kind of installations. This product range features practical housing sizes as well as a robust housing design which is perfect for building sites.

- As central junction casings for star-shaped cable laying.
- Easy to rewire when changing the way rooms are used.
- Separator walls to separate electrical circuits.
- End cover with screw attachment for VDE-compliant installation.

Processing instructions

Open the universal conduit entry with one hammer blow.

The junction casing and the support on the working form-work create a stable unit.

KAISER junction casings offer plenty of space for electrical installation according to DIN 18015-3.

Separator walls ensure that electrical circuits are safely separated.

Junction casing

- for terminals up to 16 mm²
- suitable for all types of form-work
- rear parts of casing with holder for support element
- for loose terminals up to 4 mm²

Abutment and support elements

The on-site mixed concrete programme offers special abutments and support elements for the installation of opposing one-gang boxes or the installation of one-gang boxes and junction casings on the opposite side of the formwork. For this purpose, there are holders in the back of the item that provide the support elements with a anti-rotation hold. The curved base of the box facing outwards forms an integrated spring travel, which is used to compensate for component-related tolerances when setting the opposing formwork by compressing it.

- Two abutments for fixing to the working formwork using expanding dowels, nails, screws or adhesive foil
- No blocking of conduit entries thanks to the anti-rotation support element attachments in the back of the one-gang boxes and junction casings
- The integrated spring travel ensures a secure hold between the working and opposing formwork and compensates for construction tolerances
- Thanks to their star-shaped contour, the support elements ensure that the concrete flows around the entire surface

Calculation for the supporting elements

Length of the support elements. (e.g. vertical formwork)

General formula:	$C = A - (B1 + B2)$
Wall thicknesses:	A = 200 mm
Article constants for one-gang box 1255-01:	B1 = 40 mm
Article constants for abutments 1210-02:	B2 = 5 mm
Length support element	$C = 200 \text{ mm} - (40 \text{ mm} + 5 \text{ mm})$
	C = 155 mm

Important: Take formwork inaccuracies as opposed to planned wall thickness into account! Always specify length of support elements accurately in mm when ordering!

Installation to the opposing formwork side by means of a support element

To determine the support element length, simply position the desired one-gang boxes opposite each other and stop at the planned wall thickness.

Afterwards, the required support element length can simply be measured at the markings provided on the B¹ one-gang box and then sawn off.

The prepared B¹ one-gang box protrudes approx. 5 to 10 mm beyond the planned wall thickness, so that the unit is braced between the working formwork and opposing formwork when the formwork is closed.

The integrated spring travel in the rear part of the B¹ one-gang box compensates for construction tolerances, such as the breathing of the formwork during the concreting process, and holds the B¹ one-gang box securely in position.

Abutment for adhesive foil

- for support element Ø 20 mm
- Fixing to formwork using 1219-00 adhesive foil

Art.-No.	1205-02
Inner packaging/shipping	- / 250

Abutment

- for support element Ø 20 mm
- can be combined with itself, with one-gang boxes, one-gang junction boxes, junction casing, universal installation housings and distance pieces 91
- Fixing to the formwork using expanding dowels, nails or screws

3.000 mm	1212-99	- / 1

Note

On request, we can supply support conduits with Ø 20 mm for wiring through the support element.

Subject to modifications

Prefix® concrete construction box for fixing to the reinforcement

The new Prefix® concrete construction boxes, in addition to the proven product features such as lateral installation clamps for fastening to the reinforcement, mounting clips for pre-fixing the items and marked wave profile for an exact and secure fit, now also have innovative conduit entries, insertion options in the rear part of the box as well as separators that can be broken out at a later date for connecting devices in combinations.

- Quick and easy installation on the opposing formwork, without support element and abutment
- Spacers to the side formwork ensure full circulation of the concrete and allow exposed concrete installations in passage and edge areas
- Suitable for 20 - 60 mm concrete covers
- Innovative conduit entries with diameters of 25/32 mm and 20/25 mm, for quick fitting on the construction site
- Insertion options up to 25 mm diameter on the rear base of the box
- Easy manual assembly
- Sturdy signal bristle and bold colouring for easy retrieval in the concrete surface
- Large inlay and installation clearance
- Easy installation of pre-wired installation accessories in multiple combinations using a bridge that can be broken off afterwards

Setting the concrete covers 20 - 40 mm / 40 - 60 mm

The assembly of the box for a concrete cover of 20 to 40 mm is carried out by installing the conduit entries at the bottom of the box.

This means that the conduit entries are located behind the first reinforcement layer and that time-consuming and destabilising reinforcement cuts are no longer necessary.

A concrete cover of 40 to 60 mm is also possible by simply turning the box upside down. For this purpose, the conduit entries must be arranged on the front part.

This means that the conduit entries are located in front of the first reinforcement layer and also remain usable without restrictions. The conduits are to be routed behind the reinforcement at the earliest opportunity.

Prefix® concrete construction box Ø 60 mm

- One-gang junction box for fixing to the reinforcement
- Can be used for concrete coverings from 20 - 60 mm
- Pre-fixing by means of Prefix® installation technology
- 1-piece with moulded front and rear part
- Standardised combination distance 71 mm
- with 4 screw domes and 2 expanding claw fields
- Art. No. 1211-01 replaces Art. No. 1211-61

B¹ ceiling junction box

The new B¹ ceiling boxes simplify installation on the ceiling formwork. The innovative conduit entries enable conduits to be easily inserted into several ceiling boxes arranged in a row without having to cut them during the laying work. Due to the conduit entries located higher up, additional cut-outs of the reinforcement bars are unnecessary, ensuring fast insertion of the empty conduits on the ceiling.

- Suitable for all types of formwork
- Flat front part enables smooth insertion of the reinforcing bars on the ceiling formwork
- Innovative conduit entries for fast processing on the construction site
- Larger mounting and installation space
- Mounting of a light hook in accordance with DIN EN 60670
- The proven KAISER colour coding system ensures that the installation can be checked quickly

Installation on the ceiling formwork

The exact position of the ceiling boxes is determined by means of a cord or tensioning a mason's lacing cord.

The shallow front part allows easy fixing to the ceiling formwork before the reinforcement bars are added.

The required conduit connection opening can be easily and exactly broken out with a quick tilting movement using a standard pair of combination pliers.

The conduit entries are above the lower reinforcement layer, so that no cutting of the reinforcement bars is necessary.

The advantage of the new conduit entry is that empty conduits can be inserted in several ceiling junction boxes without cutting the conduit beforehand.

After final visual inspection of the conduits, the cover can be closed simply by hand, at the same time providing secure conduit retention.

Universal screw-on surface / B¹ 45° universal ceiling exit (Art No. 1249-13).

Universal screw-on surface / universal ceiling exit (Art. No. 1265-13).

When inserting several conduits next to each other, open the conduit entries with combination pliers...

...latch the rear part onto the front part...

...and close the back cover before inserting the conduits.

The conduits can now simply be inserted into the prepared openings.

B¹ 45° domed box

- Rear part of box with holder for light hooks according to DIN EN 60670 (50 N)
- 2-piece with moulded rear part
- Suitable for all types of formwork

Universal ceiling and wall exit

Universal ceiling and wall exit with KSK technology for especially quick and safe installation. The universal Ø 85 mm screw-on surface permits the clean installation of luminaires, smoke detectors etc. without the need for drilling.

- Open the conduit entry with a hammer blow
- Combination entry for two conduit sizes
- Thanks to the integrated conduit stopper, it is not necessary to shorten the conduit inside.
- Clean installation of accessories on the universal screw-on surface without the need for drilling or using dowels

Processing instructions

The screws used to attach the device...

...can be easily screwed into the universal screw-on surface.

SERVICE

End and transition grommets, wall and ceiling elbows 30°

End and transition grommets, and wall and ceiling 30°-elbows, for ensuring a continuously functioning conduit system at transition points. The particularly compact design of the end and transition grommets enables conduit outlets to be easily arranged - even between closely spaced reinforcement bars without needing to adjust the bars. The optimum elbow radius of the wall and ceiling elbow fittings, and their precisely fitting conduit entries, avoid the occurrence of protruding edges at interfaces, thus ensuring that cables can be freely inserted from both ends.

- Compact design for easy installation between closely spaced reinforcement bars
- Optimal elbow radius for easy cable insertion
- Installation against the (as yet unplaced) front formwork by means of a support strut with base plate to the rear formwork
- Two-part design with secure snap-in connection
- Easy removal of the sealing membrane
- Small visible area for neat wall/ceiling appearance

Product advantages

The new conduit outlet design makes it easy to feed conduits...

...even between closely spaced reinforcement bars.

The recess at the rear of the elbow piece for insertion of a support installation against the front formwork using a support strut with base plate.

The optimal elbow radius of the unit facilitates flexible and easy cable insertion.

End and transition grommets

- For connecting conduits or as a ceiling outlet
- with sealing membrane at the formwork interface
- suitable for all types of form-work

Application examples

B¹ Prefix[®] wall outlet adapter

Using the B¹ Prefix[®] wall outlet adapter, end and transition grommets, and wall and ceiling 30°-elbows, can be easily and quickly fixed to the reinforcement for pressing against the (not yet placed) front formwork. They have two strong attachment slots, on opposite sides, for clicking the new Prefix[®] system wing brackets into place.

- Fast and easy installation on opposing formwork without support element and abutment
- For installation in exposed concrete, pressed against the front formwork

Examples of use

The B¹ Prefix[®] wall outlet adapter of the required size (Ø 20 mm, Ø 25 mm or Ø 32 mm) is simply snapped into place between the front and rear parts.

The B¹ Prefix[®] system wing brackets are now attached to the Prefix[®] wall outlet adapter in such a way that the planned concrete cover to the reinforcement will be achieved.

Pre-fix the wall outlet easily and quickly to the reinforcement using the Prefix[®] installation technology..

...and quickly tie it securely to the reinforcement, using both hands.

B¹ Prefix[®] wall outlet adapter - Ø 20 mm

- Facilitates fixing to the reinforcement
- Two slots for B¹ Prefix[®] system wings
- Can be used for the following articles:
- End and transition grommet / Article No. 1204-24
- Wall and ceiling elbow 30° / Article No. 1202-04

Ceiling strips

Ceiling strips for intermediate wall feeds, as ceiling exit or for connecting installation conduits. The elongated shape allows for compensation of big tolerances for lightweight intermediate wall feeds.

- For DIN EN conduits Ø 20 to Ø 25 mm
- Large tolerance compensation
- Exiting of two conduits at one exit site
- Can be combined for more than one adjacent exit
- Space for conduit ends for extending with conduit bushes

Ceiling strip (ceiling exit)

- Ceiling exit for intermediate wall feed, exit or conduit connector
- Accepts large tolerance compensation
- Open on formwork side
- Use wire-pull casing and junction casing 9914.01 for DIN EN conduits up to Ø 63 mm

Central transition casing

NEW

The new central transition box for use in on-site mixed concrete ceilings or factory prefabricated ceiling elements is used for the central connection of conduits of different diameters. As a central feed-in point, it enables a clean transition to circuit distribution boxes and cable routing systems, allowing, for example, all the supply cables required for the electrical installation of a flat to be brought together at one transition point.

- For leaving out several cables, e.g. above an electrical distribution board located in the lightweight wall or surface-mounted
- For system magnetic, adhesive or nail fastening
- Conduit entries for Ø 20 mm, Ø 25 mm and Ø 32 mm on the long sides, up to Ø 63 mm on the short sides
- Positioning of the conduit entries above the first reinforcement layer or the top of the filigree ceiling
- Can be connected in a row as often as required

Application examples

Numerous entries for conduits from Ø 20 mm to Ø 63 mm.

The central transition casing for the exit of several conduits, e.g. is located in above in the lightweight wall...

...or surface-mounted electrical distribution...

...as well as cable routing systems.

Processing instructions

Fixing by means of steel nails.

Fixing by means of KAISER system magnet (Art. No. 1299-69) or KAISER system magnet PLUS (Art. No. 1299-70).

Fixing by means of hot glue.

If required, several central transition casings can be lined up next to each other.

Central transition casing

- For system magnetic, adhesive or nail fastening
- Conduit entries for Ø 20 mm, Ø 25 mm and Ø 32 mm on the long sides, up to Ø 63 mm on the short sides
- The conduit entries are located above the first reinforcement layer or the top of the filigree ceiling

Wire-pull casings

KAISER wire-pull casings ensure expert cable routing through conduit networks. According to DIN 18015-1, conduit lengths of more than 15 m and with more than two bends require wire-pull casings that allow cables to be added or retrofitted at any time. Wire-pull casings provide multiple conduit entry options and maximum free space to ensure a continuous cable network, including with subsequent changes to the electrical installation.

- Quick and secure installation using pre-inserted nails
- Clean stripping where exposed concrete is required
- High dimensional stability, no internal support required
- Multiple conduit entry options
- Stackable

Examples of use

According to DIN 18015-1, pull-wire boxes are required for conduit sections of more than 15 m in length or when more than 2 bends are present.

KAISER wire-pull casings provide maximum room for the pulling and retrofiting of cables.

In case of sub-ceiling insulation, the wire-pull casing can be extended via intermediate frames

Also suitable for wall mounting - to be fastened to the reinforcement via Prefix® installation technology.

Flush-mounted junction boxes

- For wood and steel formwork on in-situ concrete and for flush-mounted (masonry) installations

Assembly system Prefix®

Prefix® installation system for wire-pull casings for easy, fast installation on the opposing formwork without support. The wings are simply snapped into place. The spring-loaded clamps exert a strong force on the opposing formwork, thereby ensuring exact fitting of the wire-pull casing and a clean wall appearance.

- Fast and easy installation on opposing formwork without support element and abutment
- Holding in place using the Prefix® installation technology leaves both hands free for securing with tie wires
- For facing concrete installation to the opposing formwork

Required wings per product

Universal installation housing

Universal installation housing for the installation of almost all device types and shapes in concrete walls and ceilings. The housing system consists of nine different installation housings and an extensive range of accessories.

- For displays, LED lights and much more
- For installing almost all shapes and sizes
- For installation in walls or ceilings
- For in-situ or prefabricated concrete
- For horizontal or vertical formwork and for masonry

Application example

The concreted-in housing with flush-mounted finish of the mineral fibreboard. The groove in the mineral fibreboard indicates the maximum installation area.

The support element in the installation housing prevents it being pressed inward during concreting.

When attaching the device to the installation housing, use only screws that go into but not right through the mineral fibreboard cover (e.g. SPAX countersunk head screw 3.5 x 15 mm)!

The front cover can be easily cut to create virtually any opening shape.

Note

The indicated wall thicknesses refer to walls without a fire protection function. The following applies to fire protection walls: Remaining wall thickness must be min. 60 mm. When using halogen lamps, pay attention to maximum power (see product details).

Universal installation housing with mineral fibreboard cover

- two-part, consisting of a rear housing and a front part with a mineral fibreboard insert
- all-round groove indicates the maximum opening size
- for loudspeakers, displays and LED lights

Support technology for boxes and installation housings

Supporting by means of telescopic support: Junction boxes and installation housings can be installed on either side of a wall after the formwork has been placed on one side - either by fixing them directly to the rear (already placed) formwork or by supporting them off the rear formwork via a telescopic support. If the junction box is attached directly to the already-placed formwork or if heavy loading is to be expected due to a large concrete pouring height, additional securing by means of a telescopic support is recommended.

1 Working formwork | 2 Opposing formwork | 3 Base plate | 4 Supporting plate | 5 Junction casing | 6 Hose clamp | 7 Wall thickness +2 cm | 8 Nail

Note

When the formwork is closed, the junction box and the telescopic support are compressed between the formwork panels. The extra 2 cm of length allowed ensures sufficient pressure for a secure fit. Always tighten the hose clamp fully!

Telescopic support

- For supporting all boxes (99xx.xx without support element connection detail) on erected wooden formwork
- Fixing of the base plate by means of the four enclosed nails
- Fixing of the supported box by screwing onto the support plate
- Without extension piece, adjustable for wall thickness from 135 to 205 mm + depth of supported box. With enclosed extension piece, adjustable from 195 to 265 mm + depth of supported box.

Length x Width x Height	110 x 110 x 150-300 mm
Number of nails	4
 650 °C	Yes
Art.-No.	9957
Inner packaging/shipping	- / 10

International products

For international projects, we offer a large range of products that meet the relevant national standards and regulations.

- Dimensions and approvals based on national standards
- Suitable installation tools
- Many combination options

Installation

Fix the front part to the formwork (nail or screw fastening).

Make a conduit entry (punch pliers or universal opening cutter).

Inserting the conduits through exact openings.

Simple installation via snap-in connection.

Tie lugs provide additional security if extreme loads are expected.

Open the concrete construction boxes, then install the accessory.

Simply click in the sliding nuts..

...enables the accessory inserts to be precisely aligned.

One-gang box for British accessories, one-gang

- Accessories can be aligned at any time by using to M 3.5 slide nuts
- Certified according to BS 4662 standard

One-gang box for British accessories, two-gang

- Accessories can be aligned at any time by using to M 3.5 slide nuts
- Certified according to BS 4662 standard

Conduit and cable distance piece for 1270-00	-	Yes
Art.-No.	1270-00	9060-95
Inner packaging/shipping	- / 1000	1000 / 30000

Plug-in cover

- Break-out openings for cables and light fitting support hooks
- Plug-in depth min. 3 mm max. 15 mm

Diameter	35 mm	60 mm
Art.-No.	1148-93	1259-96
Inner packaging/shipping	25 / 100	25 / 250

Expanding dowel

- for quick fixing to steel formwork
- 1-piece in plastic
- for boxes, casings, bushes etc.
- drill hole size required Ø 5.5 mm

Diameter	5,5 mm
Art.-No.	1217-02
Inner packaging/shipping	500 / 2500

Concrete construction (precast concrete)

System magnets

- The new standard in automated precast concrete
- More efficient production processes
- For a completely prefabricated electrical installation

B² one-gang junction boxes

- For magnetic and adhesive attachments
- Versions in depths of 48.5 mm, 68.5 mm and 83.5 mm
- Connection options for conduits with Ø 20 mm, Ø 25 mm, Ø 32 mm and Ø 40 mm
- 1-piece item design for quick insertion

Ceiling box

- For magnetic and adhesive attachments
- Versions in depths of 105 mm and 115 mm
- Connection options for conduits from Ø 20 mm to Ø 40 mm
- For optimum transport conditions of the slab ceilings

Transitions

- For magnetic and adhesive attachments
- For conduit sizes of Ø 20 mm, Ø 25 mm and Ø 32 mm
- For secure conduit connections at transitions between different components
- For uninterrupted empty conduit connections and outlets in walls and ceilings

Accessories

- System accessories complement the precast concrete programme
- Conduit connectors for safe conduit connection
- Universal support and extension elements for overhead installations

System Flat 45. For prefabricated concrete garages and prefabricated concrete bathrooms

- For electrical installation in modularised, industrially produced room systems
- System installation depth 45 mm
- For use in walls from 5 cm
- Fixing to the formwork using magnets, expansion dowels, rivets and threaded screws

The KAISER product range for precast concrete

Industrially precast slab concrete elements are produced with dimensional accuracy largely using an automated precast concrete process. The high level of pre-planning, industrial prefabrication in a protected environment and automation during production with regard to the fixing and assembly of installation parts ensure short assembly times and minimised costs. The components for the electrical installation must also be fixed and integrated into the wall or ceiling with the same level of precision as is applied to their manufacture.

1 Wall and ceiling transition 90°, Oval funnel | **2** Large slab ceiling box 115 for magnet attachment | **3** HaloX® 250 with tunnel for precast concrete for magnet attachment | **4** B² one-gang junction boxes for magnet attachment | **5** B² one-gang junction box without plaster skin, depth 68.5 mm | **6** B² one-gang junction box with plaster skin, Universal extension element 175 to 300 mm | **7** End and transition grommet, wall and ceiling elbow 30°, wall and ceiling transition 90° for magnetic mounting | **8** HaloX® 180 for precast concrete for magnet attachment | **9** HaloX® 180 / 250 for precast concrete for magnet attachment | **10** HaloX® 180 with tunnel for precast concrete for magnet attachment | **11** Universal installation housing with mineral fibreboard | **12** B² one-gang junction box without plaster skin, depth 48.5 mm

Perfect connections for automated production.

The system magnet provides the basis for good installation of all electrical installation solutions in precast concrete.

Application examples

The system magnet is used to hold B² one-gang junction boxes,...

...HaloX® luminaire and loudspeaker housings,...

...wall and ceiling transition 30°, end and transition grommets...

...as well as for accommodating large slab ceiling boxes.

As well as for the new 48.5 mm extension element...

...the new wall-ceiling transitions 90°,...

...the central transition casing,...

...and the system magnet adapter for the inclined support attachment.

One system magnet for all applications.

The system magnet is suitable for all installation parts required in wall and ceiling production to prepare the electrical installation in-factory. The system magnet can be used for correct positioning in both manual and automated production. In automated production, the magnet can be placed on the formwork table automatically and in the correct position using the multifunction gripper. The PLUS system magnet can also be removed and magazined automatically.

NEW

System magnet and system magnet PLUS

The system magnet has created a new standard in automated precast concrete for efficient manufacturing processes. This means that the electrical installation can be efficiently implemented using digital planning (BIM) and can flow seamlessly into the precast concrete production process. The complete electrical installation can now be automatically integrated into the in-factory production process with the new system magnet (item no. 1299-69) or system magnet PLUS (item no. 1299-70). Regardless of whether you're using B² one-gang junction boxes, wall and ceiling transitions, large slab ceiling boxes or luminaire and loudspeaker housings, the new system magnets can be used to position everything safely and with millimetre precision. After removing the concrete formwork elements, the system magnets PLUS (item no. 1299-70) can be removed automatically.

- The complete installation can be carried out with only one type of magnet – for automated setting (system magnet, item no. 1299-69) and/or setting and removal (system magnet Plus, item no. 1299-70)
- Four sideway notches ensure torsion-proof installation of the one-gang boxes
- Reusable

 INNOVATION

System magnet

- for accurate positioning during automated or manual production
- with an anti-twist device for one-gang boxes

B² one-gang junction boxes

NEW

The new B² one-gang junction boxes for precast concrete offer plenty of space for terminals and cables thanks to their large volume and ease of assembly. The version with a slot for the system magnets (Art.-Nr. 1299-69) or system magnet PLUS (Art. No. 1299-70) is perfect for quick attachment to system magnets that have already been set automatically. Multiple combinations with a standardised combination distance of 71 mm can be created quickly and easily using the connection options on the side of the B² one-gang junction boxes. The separately available conduit connectors for toolless conduit connection prevent concrete from flowing in and, at the same time, dampen conduit vibrations during the compaction process.

- For in-factory installation
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- 4 screw domes and 2 expanding claw fields for accessory fitting
- Standardised combination distance 71 mm
- 1-piece

INNOVATION

Fixing variant

B² one-gang junction boxes with holder for KAISER system magnets (Art. No. 1299-69 / 1299-70).

B² one-gang junction boxes without plaster skin with holder for the magnet (Art. No. 1261-81).

B² one-gang junction boxes with plaster skin to hold the adhesive foil (Art. No. 1219-00)...

...or by means of hot glue.

Product advantages

The conduit connectors buffer the vibrations that occur between the conduit and the box during the compression process...

...and at the same time securely seal the connection in any position.

Combination of two B² one-gang junction boxes...

...fixed to the steel formwork using a system magnet.

B² one-gang junction boxes

- for in-factory installation
- Slot for system magnet (Art.-No. 1299-69) and system-magnet PLUS (Art.-No. 1299-70)
- 1-piece
- 4 screw domes and 2 expanding claw fields for accessory fitting
- Standardised combination distance 71 mm

Inner packaging/shipping	25 / 250

B² conduit connectors

The range of B² conduit connectors offers a secure and toolless conduit connection to the B² one-gang junction boxes without the need for special tools. The conduit connection created using a conduit connector is absolutely impermeable to concrete and safely dampens the vibrations of the conduits during the compaction process. As the conduit connection is made outside the B² one-gang junction boxes, no conduit protrudes into the interior of the box, thus eliminating the need to shorten the conduit on the inside. With the new 90° conduit connectors, sideways conduit connections can now also be easily implemented in narrow installation areas.

- Toolless conduit connection, no special tools required
- Precisely fitting „variable“ conduit connection, absolutely sealed against concrete
- Damping of vibrations during the high-frequency or low-frequency compression process
- Conduit connection outside the one-gang junction box, no conduits protruding into the interior of the box
- Conduit connectors 90° for the lateral connection of conduits in narrow installation areas

NEW

3D animation

Secure and fast connections using KAISER conduit connectors

With the extensive KAISER conduit connector programme, all rigid or flexible conduits in diameters of 20, 25, 32 and 40 mm can be connected to the B² one-gang junction boxes. Two cutting edges on the connection piece are used to open the box entries without the need for tools; all that is needed to open the entry is to turn it with pressure against the box.

B² conduit connectors

for horizontal precast concrete

Application examples

B² conduit connectors with integrated conduit lock for flexible as well as rigid conduits Ø 20/25/32/40 mm.

Insert the tips of the conduit connector into the desired conduit entry...

...and using pressure, turn against the one-gang junction box until the feed-through is cut out.

Straight conduit connectors as well as 90° and 60° versions enable every conceivable conduit connection.

Processing instructions / prefabrication

The B² range, consisting of one-gang junction boxes, conduit connectors and wall/ceiling transitions, enables complete pre-assembly of the electrical installation. For this...

...the conduit connectors and wall/ceiling transitions offer the greatest possible tolerance compensation when using rigid conduits.

The planned sub-assemblies for the respective concrete wall elements can be prefabricated in the factory to fit precisely and on time...

...and then simply and quickly positioned on the formwork table in the circulation system without unnecessarily burdening the production process.

Conduit connector

- Toolless conduit connection to the B² one-gang junction boxes
- Accepts rigid and flexible conduits
- Damping of conduit vibrations during the compaction process
- Prevents the conduits penetrating the one-gang junction box and thus prevents conduits from being shortened later on
- Art.-Nr. 1261-21 replaces Art. No. 1261-20 and Art. No. 1261-26 replaces Art. No. 1261-25

NEW

Product-Data

DIN EN conduit Ø	20 mm	25 mm	32 mm	40 mm
Art.-No.	1261-21	1261-26	1261-32	1261-40
Inner packaging/shipping	- / 100	- / 100	- / 100	- / 100

Conduit connectors Ø 20/25/32/40 mm

With built-in conduit lock designed especially for corrugated conduits as well as rigid conduits with a diameter of Ø 20/25/32/40 mm.

The tip of the conduit connector is inserted at the marking.

Using pressure, the conduit connector is turned against the one-gang junction box until the feed-through is cut out.

Snap in the conduit connector and insert the conduit into the conduit connector.

Conduit transition coupling Ø 32 mm

NEW

- For toolless connection of Ø 32 mm conduits to the B² one-gang junction boxes 1262-XX and 1263-XX
- Accepts rigid and flexible conduits
- Damping of conduit vibrations during the compaction process
- Prevents the conduits from penetrating the B² one-gang junction boxes and thus avoids subsequent conduit shortening

DIN EN conduit Ø	32 mm
Art.-No.	1263-32
Inner packaging/shipping	- / 100

Conduit transition coupling Ø 32 mm – Application examples

With built-in conduit lock designed especially for corrugated conduits with a diameter of 32 mm.

Push the nose of the conduit transition coupling at the marking of the box and turn it with pressure against the B² one-gang junction box until the feed-through is cut out.

The conduit transition coupling directs the inner diameter of the conduit unrestricted into the B² one-gang junction boxes Art. No. 1262-XX and 1263-XX...

...and thus enables the secure conduit connection of two Ø 32 mm conduits from one direction.

90° conduit connector

NEW

- Toolless conduit connection to the B² one-gang junction boxes
- Accepts rigid and flexible conduits
- Damping of conduit vibrations during the compaction process
- Prevents the conduits penetrating the one-gang junction box and thus prevents conduits from being shortened later on
- Easy cable pull-in thanks to optimised 90° conduit elbow

DIN EN conduit Ø	20 mm	25 mm	32 mm
Art.-No.	1262-20	1262-25	1262-32
Inner packaging/shipping	- / 100	- / 100	- / 100

Conduit connector 90° – Application examples

Pierce the tip of the conduit connector 90° at the marking and turn it with pressure against the B² one-gang junction box until the feed-through is cut out.

Insert the conduit in engaged 90° conduit connector.

The 90° conduit connectors enable the lateral connection of conduits even in tight installation areas...

...for both flexible and rigid conduits.

60° conduit connector

- space-saving entry of conduits in confined spaces, e.g. door and window areas
- for punching out markings without tools
- for fitting flexible 25 mm DIN EN conduits

Art.-No.	1266-25
Inner packaging/shipping	- / 100

Conduit connector 60° / diameter 25 mm

Snap the two halves of the 60° conduit connector together.

Pierce the tip of the 60° conduit connector at the desired conduit entry and turn until the feed-through is cut out.

Insert the conduit in engaged conduit connector 60°.

3-unit combination with inserted conduits in the wall area.

48.5 mm extension element for system magnet

The new 48.5 mm extension element for precast concrete enables automated positioning and fixing of overhead electrical installations in solid concrete walls as well as double concrete walls. The integrated slot for the system magnets (Art. No. 1299-69) and system magnet PLUS (Art. No. 1299-70) offers a safe, formwork-flush fit on the horizontal steel formwork for the circulation systems used in the concrete plants. At the same time, the tried-and-tested B² push-button connection ensures a secure connection to all B² one-gang junction boxes and B² extension elements and thus enables overhead installation from a wall thickness of 100 mm.

- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- For use in automated production lines
- Push-button connection to all B² one-gang junction boxes and B² extension elements
- Can be combined with itself, the B² one-gang junction boxes and distance piece 142
- Integrated closing cap to protect the rear of the system magnet from concrete
- Spacers at the front ensure complete flow around the recess
- After formwork removal, the system magnet remains on the formwork table

NEW

Processing instructions

The fixing of 48.5 mm extension element (Art. No. 1261-02) for use in automated production lines is carried out via...

...the system magnets (Art. No. 1299-69 or 1299-70) and thus provides the precisely aligned and secure basis for overhead installation.

By putting on the integrated closing cap, the interface of the system magnet is protected from concrete on the rear side.

Peripheral sealing lips protect the system magnet from the inflowing concrete on the front side, while the external spacers allow the concrete to completely flow around the recess at the same time.

The connection between the extension element and B² one-gang junction boxes is made via the proven B² push-button connection.

The 48.5 mm extension element can be combined with itself, the B² one-gang junction boxes and the distance piece 142 (Art. No. 1261-18).

In combination with the extension element 10 to 50 mm (Art. No. 1261-10) and the universal extension elements 105 - 170 mm (Art. No. 1261-08)...

...and/or 175 - 300 mm (Art. No. 1261-09), overhead installations can be realised in all wall element thicknesses.

Extension element for system magnet

for horizontal precast concrete

48.5 mm extension element for system magnet

INNOVATION

3D animation

- for installation of overhead B² one-gang junction boxes
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- Standardised combination distance 71 mm
- Can be used for the following articles:
 - B² one-gang junction boxes / Art. No. 1262-XX, 1263-XX, 1264-XX
 - 10 – 50 mm extension element / Art. No. 1261-10
 - Universal extension elements / Art. no. 1261-08/-09
 - Flat 45 one-gang box / Art. No. 1256-01
 - Flat 45 one-gang junction box / Art. No. 1266-01
 - Flat 45 wall light connection box / Art. No. 1246-01
- Can be combined with the following items:
 - B² one-gang junction box / Art. No. 1262-XX, 1263-XX, 1264-XX
 - B² distance piece 142 / Art. No. 1261-18

Vertical installation height	48,5 mm
Art.-No.	1261-02
Inner packaging/shipping	- / 100

Application examples – 48.5 mm extension unit

Simple and safe adjustment to the required wall thickness for solid wall elements and for double walls.

Extension element 10/50 mm

Extension element for bridging wall thicknesses and supporting one-gang boxes during installation on the opposing formwork. Bridging of up to 100 mm (plus box dimensions) can be underpinned securely in increments of 10 or 50 mm.

- For installation of overhead one-gang junction boxes
- Fitting height: vertical 50 mm, horizontal 10 mm
- can be attached to one-gang junction boxes or abutment using push-stud conduit connector
- Clip the connector into place, insert the conduit into the connector.

Processing instructions

Connected crossways, the elements provide stable and non-distorting support.

A wide range of possibilities for adjusting the installation height.

Different installation heights can be created in 10 mm or 50 mm increments.

The abutment is required as an initial element on the switch table for overhead boxes and can be connected to extension elements and one-gang junction boxes.

Extension element 10/50 mm

- for fitting of overhead one-gang junction boxes at greater heights
- can be attached to one-gang junction boxes or abutment using push-stud conduit connector

Installation heights, horizontal	10 mm
Installation heights, vertical	50 mm
Art.-No.	1261-10
Inner packaging/shipping	- / 50

Abutment

- for fitting of overhead one-gang junction boxes at greater heights
- for fixing to formworks

Art.-No.	1261-11
Inner packaging/shipping	- / 50

Universal extension element from 105 mm

Universal extension element for bridging wall thicknesses of more than 105 mm and supporting one-gang boxes during installation on the opposing formwork. Thanks to the various sizes, heights of 105 mm up to 300 mm (plus box dimensions) can be bridged in increments of 5 mm.

- For installation of overhead one-gang junction boxes
- Height adjustable in increments of 5 mm
- Can be attached to one-gang junction boxes using push-button connection

Processing instructions

Connect the universal extension element and the B² one-gang junction box using the push-button connection.

Attach the universal extension element to the formwork table with hot glue.

The correct height is achieved by simply assembling the two halves.

Opposite, B² one-gang junction boxes installed with universal extension element.

Note

For lengths of less than 105 mm, the two parts are simply shortened and put back together again.

Universal extension element

- for fitting of overhead one-gang junction boxes at greater heights
- height adjustable in increments of 5 mm

System magnet adapter for the inclined support fixing

In addition to the electrical installation components in concrete wall production, there are new system magnet adapters for the automated integration of the mounting dowels for installing the wall elements on the construction site into the factory production process. These are matched to the available inclined support attachments on the market and thus enable the complete factory integration of all components required for a wall element.

- Patented system magnet locking mechanism for a secure fit on the system magnet when an inclined support attachment is attached
- Easy placement on the system magnets and simple removal after formwork removal
- Secure and concrete-tight connection to the mounting dowel
- Tapered contour for the adapter to remain securely on the formwork table

NEW

INNOVATION

Application examples

Thanks to the innovative system magnet lock, the adapter can be easily attached to and removed from the system magnets (Art. No. 1299-69 / 1299-70).

As soon as the mounting dowel is placed on the adapter, the system magnet locking mechanism engages,...

...so that the adapter remains securely on the magnets after formwork removal, also thanks to its conical contour.

At least two mounting dowels are required for each wall element when installing the concrete wall elements.

System magnet adapter for the inclined support attachment

NEW

INNOVATION

- For the automated and precise positioning of all commercially available inclined support attachments or assembly dowels
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)

For manufacturers	On request
Art.-No.	1200-99
Inner packaging/shipping	- / 200

NEW

Large slab ceiling box

The large slab ceiling box is suitable for in-factory installation in prefabricated ceilings. The version with a slot for the system magnet (Art. No. 1299-69) or system magnet PLUS (Art. No. 1299-70) is ideally suited for quick attachment to system magnets that have already been set automatically. The large slab ceiling boxes are already a part of the ceiling when they reach the construction site and enable the quick insertion of empty conduits. The resealable quick-release cover can be opened with a quarter turn and so enables the quick and exact creation of conduit entries using punch pliers (Art. No. 1286-33/-34).

- For in-factory installation
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- Large adhesive area with rough surface structure for a secure fit on the formwork table
- 115-mm installation height guarantees optimal transport conditions for prefabricated ceilings
- Quick-release cover for fast cutting of conduit entries using punch pliers
- Integrated M5 domed cap nut ensures secure fitting of a light hook.
- With closing cover for on-site fitting of conduits

INNOVATION

Processing instructions

Large slab ceiling box fixed to steel table by means of system magnet.

Quick-release cover for fast cutting of conduit entries using punch pliers.

8 markings for entries up to Ø 25 mm for easy creation of cable or pipe entries above the filigree ceiling element.

M5 metal nut for secure mounting of light hooks up to 100 N (10 kg) according to DIN EN 60670.

Large slab ceiling box 115

- For in-factory installation
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- Installation height 115 mm, with M5 metal nut for light hook (min. hook length: 115 mm + plaster thickness)
- With closing cover for on-site fitting of conduits
- maximum light hook load according to DIN EN 60670 100 N (10 kg)

NEW

Central transition casing

The new central transition box for use in in-situ concrete ceilings or factory prefabricated element ceilings is used for the central connection of conduits of different diameters. As a central feed-in point, it enables a clean transition to circuit distribution boxes and cable routing systems, allowing, for example, all the supply cables required for the electrical installation of a flat to be brought together at one transition point.

- For leaving out several cables, e.g. above an electrical distribution board located in the lightweight wall or surface-mounted
- For system magnetic, adhesive or nail fastening
- Conduit entries for \varnothing 20 mm, \varnothing 25 mm and \varnothing 32 mm on the long sides, up to \varnothing 63 mm on the short sides
- Positioning of the conduit entries above the first reinforcement layer or the top of the filigree ceiling
- Can be connected in a row as often as required

Application examples

Numerous entries for conduits from \varnothing 20 mm to \varnothing 63 mm.

The central transition casing for the exit of several conduits, e.g. is located in above in the lightweight wall...

...or surface-mounted electrical distribution...

...as well as cable routing systems.

Processing instructions

Fixing by means of KAISER system magnet (Art. No. 1299-69) or KAISER system magnet PLUS (Art. No. 1299-70).

Fixing by means of hot glue.

Fixing by means of steel nails.

If required, several central transition casings can be lined up next to each other.

Installation

The fixing of the central transition casing (Art. No. 9914.10) for use in automated production systems...

...is achieved using the KAISER system magnets (Art. No. 1299-69 or 1299-70).

Latch the centre transition casing onto the front section.

After curing, the prefabricated ceiling formwork is removed and prepared for transport to the construction site.

The required conduit entries can be opened with the KAISER step drill (Art. No. 1284-32)...

...or opened with a screwdriver and hammer.

The side entries \varnothing 40 mm to \varnothing 63 mm can be drilled out using a hole saw.

Numerous entries for conduits from \varnothing 20 mm to \varnothing 63 mm.

Open the plaster skin with a hammer and, if necessary, with a screwdriver.

The upper frame (Art. No. 9914.10.68) can be used for suspended ceiling insulation. Multiple times if required.

The plastic screw cover (Art. No. 9914.10.02) with six screws supplied is available for a clean room separation...

...or the wet lid made of aluminium (Art. No. 9914.10.03) with anodised surface and six stainless steel screws supplied.

Central transition casing

Wall and ceiling transitions

For the first time, the new end and transition grommets, 30° wall and ceiling elbows, and 90° wall and ceiling transitions allow the automated positioning and fastening of conduit connections in precast concrete elements. The integrated slot for the system magnets (Art. No. 1299-69) and system magnet PLUS (Art. No. 1299-70) enables a safe, formwork-flush fit on the horizontal steel formwork for the circulation systems used in the concrete plants. The new items also provide alternative options for fixing to formwork. They can be fixed using hot glue, steel nails and even for overhead installation in solid wall elements using Prefix® Universal supports (Art. No. 1261-00).

- Slot for system magnet (Art. No. 1299-69) and system magnet PLUS (Art. No. 1299-70) for use in automated production lines
- For conduit sizes of Ø 20 mm, Ø 25 mm and Ø 32 mm
- All end and transition grommets, wall and ceiling elbows 30° and wall and ceiling transitions 90° can be combined with each other
- Resealable sealing cover to protect the empty conduit system from concrete when installed on top, during transport and when erected on site
- Signal bristle and bold colouring for easy retrieval in the concrete surface
- Optimal elbow radius for easy cable insertion
- 1-part design, immediately ready for use

NEW

3D animation

INNOVATION

Application examples

Wall and ceiling transitions with slot for the KAISER system magnet (Art. No. 1299-69) and system magnet PLUS (Art. No. 1299-70).

Wall and ceiling transitions for fixing by means of hot glue.

For mounting on the working formwork – two sturdy nail domes with nail pre-fixing enable a secure hold on the formwork with steel nails.

Prefix® universal support (Art. No. 1261-00) – Simple and fast processing for overhead installations.

Processing instructions

Re-closable closing cover – Protection from concrete during transport and when erecting the wall element on the construction site.

Signal bristle – Easy locating of the transition in the wall surface

The new elbows can be combined in the best possible way and can therefore be processed quickly and precisely.

The optimal elbow radius of the new unit facilitates flexible and easy cable insertion.

One-gang junction boxes and system components

for horizontal precast concrete

Processing instructions - Pre-assembly

The B² range, comprising one-gang junction boxes, conduit connectors and wall/ceiling transitions enables complete pre-assembly of the electrical installation.

The conduit connectors and wall/ceiling transitions offer the greatest possible tolerance compensation when using rigid conduits.

The planned sub-assemblies for the respective concrete wall elements can be prefabricated in the factory to fit precisely and on time.

These can then be positioned on the formwork table quickly and easily in the circulation system without unnecessarily burdening the production process.

End and transition grommets

- For connecting conduits at transition points
- Slot for system magnet (Art.-No. 1299-69) and system magnet PLUS (Art.-No. 1299-70)
- Large adhesive surface
- For overhead installation in solid walls
- With closing cover to prevent ingress of foreign bodies
- Combinable end and transition grommets and wall and 30° ceiling transition
- Two slots for Prefix® system accessories
- Suitable for all types of formwork
- Two nail domes

Prefix® universal support

NEW

The Prefix® universal support enables simple, fast fitting of electrical installations in solid wall elements on the opposing formwork side without a support element for the steel formwork table. The support can be easily adjusted to the required concrete ceiling by means of a snap-in connection and attached to the new end and transition bushes, wall and ceiling transitions 30° and wall and ceiling transitions 90° by means of a snap-in connection. The previously customary and costly in-house constructions using timber blanks can thus be dispensed with, disruptions to the further production process are a thing of the past and production of a good wall surface quality is guaranteed without restriction.

- For overhead electrical installations in prefabricated solid walls without support elements
- With integrated dimension indication, easily adjustable to the common concrete ceilings 20 mm, 25 mm, 30 mm or 35 mm
- Generous tolerance compensation for fixing to the reinforcement
- Prefixing using Prefix® installation technology leaves both hands free for fixing with tie wires

INNOVATION

Fitting instructions

The new wall and ceiling transitions for factory production each have two opposing stable slots for the Prefix® universal support.

The required concrete ceiling can be quickly read off and precisely set using the dimensional scale. The dimensional scale is adjusted, so that the wall-ceiling transitions are minimally below the subsequent wall surface,

and therefore do not impede the next steps in the manufacturing process. The signal bristle keeps the position of the exits visible in the concrete surface.

Prefix® universal supports have a stable snap-in connection and can be released and repositioned if the concrete ceiling is set incorrectly.

Prefix® universal support

- For electrical installations on the opposing formwork side.
- Facilitates fixing to the reinforcement
- Adjustable to concrete ceilings 20, 25, 30 or 35
- Pre-fixing by means of Prefix® installation technology
- Can be used for the following articles:
- End and transition bushes / item no. 1261-82/-83/-84
- Wall and ceiling transitions 30° / item no. 1261-92/-93/-94
- Wall and ceiling transitions 90° / item no. 1261-95/-96/-97

Wall and ceiling transition

Wall and ceiling transition for uninterrupted conduit connections and wall and ceiling exits. The exact distance to the formwork edgings can be set and fixed in 5 mm increments with the integrated measurement strip.

- For secure conduit connections on prefabricated concrete elements
- For fitting to formwork edging
- For rigid and flexible DIN EN conduits Ø 25 mm
- For locating exact height thanks to integrated measurement strip

Installation

The exact position is achieved with the help of the measurement strip and by gluing it to the formwork edging.

The moulded closing cover protects the opening against dirt and concrete. Simply open it prior to installation.

Insert the conduit into the clean installation opening.

Wall exit of a prefabricated wall as transition to the filigree ceiling.

Wall and ceiling transition

- for fitting to formwork edging
- with moulded-in measurement strip to achieve the exact installation height in 5 mm steps
- with closing cover to prevent ingress of material

DIN EN conduit Ø	25 mm
Art.-No.	1261-12
Inner packaging/shipping	- / 100

One-gang junction boxes and system components

for horizontal precast concrete

90° wall and ceiling transition

90° wall and ceiling transition for uninterrupted conduit connections and wall and ceiling exits. The 90° bend makes it much easier to pull the cables through at a later stage.

- For secure conduit connections on prefabricated concrete elements
- For fitting to formwork edging
- For rigid and flexible DIN EN conduits
- Upper conduit entry above the filigree ceiling, for laying conduits on the building site

Processing instructions

The 90° bend ensures clean transitions and easy cable routing. Just glue the wall and ceiling transition to the formwork edging.

The clip nose is used for securing corrugated conduits with Ø 20 or Ø 25 mm.

Two integrated closing covers protect against dirt and concrete penetration.

Wall-ceiling transition 90° using the oval funnel.

Wall and ceiling transition 90°

- for easier drawing of cable through 90° bends
- for fitting to formwork edging
- accepts rigid and flexible DIN EN conduits
- with closing cover to protect against foreign bodies

DIN EN conduit Ø	20 mm	25 mm
Art.-No.	1261-16	1261-14
Inner packaging/shipping	- / 100	- / 100

Oval funnel

The oval funnel simplifies the exact joining of prefabricated concrete elements with integrated installation conduits. It guarantees safe conduit entry and provides a tolerance compensation of 1 cm or 2 cm during installation.

- Tolerance compensation when joining the concrete elements
- For industrially prefabricated ceiling and wall elements as well as on-site mixed concrete
- For secure connection of installation conduits on transitions of prefabricated concrete elements
- Precise joining of electrical installation conduits
- Tolerance compensation: 2 cm in longitudinal direction and 1 cm in transverse direction.

Tolerance compensation when joining the concrete elements

Compensation in longitudinal direction ± 20 mm.

Compensation in transverse direction ± 10 mm.

Wall-ceiling transition 90° using the oval funnel.

Good compensation of construction tolerances.

Oval funnel

- for the simple connection of DIN EN conduits with tolerance compensation for wall-wall and wall-ceiling transitions
- for installation on the transition edge
- accepts rigid and flexible DIN EN conduits
- with closing cover to prevent ingress of material

DIN EN conduit Ø	20 mm	25 mm
Art.-No.	1261-42	1261-43
Inner packaging/shipping	- / 100	- / 100

NEW

System Flat 45

The new Flat 45 system makes electrical installation in modularised, industrially produced room systems simpler, more flexible and more economical. With its low installation depth of 45 mm, the Flat 45 one-gang, one-gang junction and wall light connection box is specially adapted for the factory production of complete modules with low wall thicknesses. For secure fixing to the formwork using expansion dowels, rivets and threaded screws, they have fixing options at the front and rear. Exact positioning on the reinforcement with support element on the rear abutment between the two formwork sides is made possible by special fixing and support elements with lateral connectors and support elements for wall thicknesses of 8 and 12 cm.

- Complete range consisting of one-gang box, one-gang junction box and wall light connection box
- System installation depth 45 mm
- Robust and concrete-tight article design
- One-gang junction box with generous lateral terminal compartment
- Can be stably combined over the complete box body with a standardised combination distance of 71 mm
- Easy installation of pre-wired installation accessories in multiple combinations using a bridge that can be broken off afterwards

INNOVATION

Application examples

By using the universal VDE cover (art. no. 1184-90), the Flat 45 system boxes can be used as junction boxes.

The central cable routing option of the universal waterproof cover (Art. No. 1174-99) allows surface-mounted luminaires to be connected safely.

Thanks to the conduit transition coupling $\varnothing 32$ mm (Art. No. 1263-32), the one-gang junction box Flat 45 can be used as a wallbox junction box in walls from 75-80 mm.

The wall light connection box Flat 45 provides space in walls from 50 mm for 3 connection terminals and corresponding cables or for the connection of a game light.

The Flat 45 fixing and support elements for wall thicknesses of 6 to 12 cm press the box front against the working formwork and ensure secure positioning.

The slots on the back of the Flat 45 system boxes are used in 50 mm walls to support the back of the box against the formwork and prevent the box from tilting when fixed on the back.

The signal bristle on the front parts of the Flat 45 system boxes clings to the formwork when it moves and keeps its position visible in the wall surface.

The robust design of the Flat 45 system boxes with a wall thickness of 2 mm keeps them safely in shape even under the highest loads.

One-gang box Flat 45

- For use in walls from 5 cm
- Attachment of the Flat 45 fixing and support elements by push-button connection
- 1-piece with moulded rear part
- Standardised combination distance 71 mm
- with 4 screw domes

Installation housing for concrete construction

- Free space for luminaires and loudspeakers in concrete ceilings and walls
- Modular and flexible for all installation diameters and installation depths
- For on-site mixed concrete and precast concrete
- Optional for facing concrete
- Toolless combination entry for M20/M25 conduits - can be reclosed
- Maximum contact surface to the concrete ensures optimal thermal management
- Shape-retaining, loadable – and easily fitted
- All housings available with or without tunnel
- Housings and front parts are firmly and stably latched together and can still be aligned as required afterwards
- Signal cover of Ø 68 mm, Ø 75 mm and Ø 80 mm to protect the installation openings from plaster materials.

Installation housings for walls and ceilings

- Free space for luminaires and loudspeakers
- Prevents latent fire hazard
- Ensures long term retention of air tightness as per DIN 18015- 5 or DIN 4102- 7
- Systems for new construction and renovation

Fire-protection housings

- Safe, certified fire-protection housings for built-in luminaires and loudspeakers in fire protection ceilings.
- Integrated fire-retardant coating maintains the fire resistance class F30 (EI30) of the ceiling in fire protection ceilings.
- They prevent fire and flue gases from spreading, thus securing escape routes in buildings
- Suitable for fire resistance from above and from below

pg. 247

HaloX® for precast concrete

The housing system for ceilings and walls is available in 2 different housing sizes with fixed or variable installation diameters up to 250 mm (up to 210 mm with tolerance compensation).

pg. 260

HaloX® for retrofitting

HaloX® for the retrofitting of installation housings in slab ceilings and solid ceilings. After creating a drilling hole, the housings can be extended according to the ceiling thickness.

pg. 257

A system for all eventualities – for processing on-site mixed concrete, the front parts can be fixed to the working formwork with nails. Prefix® installation sets are available for fixing to the opposing formwork. In precast concrete, the housings can be installed with adhesive or magnetic attachment.

Combination entry for conduits M20/M25 – toolless opening technology with safe conduit retention and depth stop, without the need to shorten the conduits on the inside. Reusable in case of installation changes or incorrect assignments.

Pressure-resistant tunnel to accommodate operating devices. Minimal impact on the main structure – does not require reinforcement steel to be cut to create the tunnel.

Multi-conduit entry
Conduit entries up to M40 – ideal for pre-assembled cables.

Shape-retaining and resilient. Compact housing with stabilizing wave profile provides the necessary stability during the concreting process – even under extreme loads.

Continuous housing system – modular, flexible for luminaires and loudspeakers at all heights and with mounting diameters up to 250 mm, also for facing concrete requirements.

For walls and ceilings

Wave-shaped surface profile ensures maximum housing surface for optimum heat dissipation via the concrete.

HaloX® concrete installation housing

The new HaloX® housing system offers space for new light or sound in concrete ceilings and walls. Shape-retaining, loadable and in a modular design, the HaloX® system provides a secure installation compartment for loudspeakers and luminaires with LED, halogen or compact fluorescent lamps. Round, square or universal front parts ensure that any device up to a ceiling cut-out of 250 mm can be installed, even when facing concrete is required. Optional extension rings provide more space for greater installation depths. The toolless combination entry for M20/M25 conduits is easy to internal and, even with incorrect occupancy, is easily closed again. It provides secure conduit retention with depth stop, so there is no need for later internal shortening of the conduits.

- For on-site mixed concrete and precast concrete - for wall and ceiling
- For luminaires and loudspeakers with installation diameters up to 250 mm
- All housings available with and without a tunnel
- Toolless entry technology for M20/M25 conduits
- Optimal heat management thanks to maximum surface contact with the concrete
- Minimal effect on the statics - no cuts to the reinforcement required in the tunnel area

Temperature management for HV LED and LV LED luminaires

230V built-in LED luminaire with 68 mm installation diameter

Temperature profile 230V built-in LED luminaire max. 20 W

LV LED luminaire installation diameter 140 mm

Temperature profile LV LED luminaire max. 35 W

Temperature management for HV halogen and TC luminaires

230V built-in luminaire with 100 mm installation diameter

Temperature profile HV halogen luminaire max. 75 W (230V)

Installation downlight TC-TEL 2 x 26 W with installation diameter of 215 mm

Temperature profile installation downlight TC-TEL with 2 x 26 W

HaloX® concrete installation housing (on-site mixed concrete)

The shape-retaining HaloX® system has a modular design for fitting in on-site mixed concrete. Three housing diameters with a large number of round, square and universal front parts allow the integration of luminaires and loudspeakers up to an installation diameter of 250 mm, including in facing concrete. With a tunnel, the system provides sufficient space for operating devices, such as LED drivers. Optional extension rings to increase the installation depth. All front parts are moisture-repellent and can be positioned exactly and nailed-on even before the first reinforcement is laid. Housings and front parts are firmly and stably latched together and can still be aligned as required afterwards. By means of the toolless, opening technology with a M20/M25 combination entry, conduits can be inserted quickly and easily and, even if the population is incorrect, the entry can easily be closed again. It provides secure conduit retention with a depth stop, so there is no need for subsequent internal shortening of the conduits. After casting, front parts with a defined installation diameter can be opened with a targeted blow of the hammer. The front parts for universal opening sizes can be plastered locally or plastered over. You can then cut the required installation opening using standard cutting tools e.g. PROFi cutter.

- For walls and ceilings
- Housings and front parts are latched together securely and sturdily, and can also be subsequently aligned as required
- All housing sizes are available with and without a tunnel
- Toolless entry technology for M20/M25 conduits
- Optimal heat management thanks to maximum surface contact with the concrete
- Minimal impact on the main structure – does not require reinforcement steel to be cut to create the tunnel

Examples of use

The combination conduit entry can be opened simply by hand. If necessary, conduit entries that have already been opened can simply be closed again.

The flat front part (20 mm) lies below the lower reinforcement layer, thus not hindering any subsequent works, and can be precisely aligned using the centre marking.

The combination conduit entry provides a secure connection for both jacketed and non-jacketed pipes and can be used individually for conduit sizes of 20 mm or 25 mm diameter. It offers a high degree of pull-out safety and, thanks to the integrated depth stop, makes subsequent internal shortening of the conduits superfluous.

All HaloX® installation housings are robustly designed and meet the requirements of the harsh conditions at the construction site and in the concrete plant.

HaloX® 100 / 180 / 250 (on-site mixed concrete)

- Toolless combination entry for M20/M25 conduits
- Conduit entry limitation to prevent the need to shorten the conduit inside

Signal cover

The new signal cover ensures a clean ceiling appearance and avoids time-consuming reworking of the installation opening after plastering. As an accessory item for the KAISER HaloX® concrete installation housings, the signal cover is simply inserted into the already opened front part after formwork removal from the rough ceiling or wall. Thus, the installation opening is securely closed and protected against penetration of plaster. Three signal bristles, in combination with the bright red colour, ensure that the installation opening in the plastered rough ceiling or wall can be found quickly and easily. The installation opening can be opened with one targeted blow of the hammer without destroying the surrounding plaster pattern. With one turn of the knife edge, cleaning residues are removed effortlessly. The flexible signal cover can then be removed easily and cleanly. Its specially serrated edge structure preserves the plaster edge.

- Stable and robust clamping in installation diameters of Ø 68 mm, Ø 75 mm and Ø 80 mm
- For use in fixed HaloX® front parts, universal HaloX® front parts and other installation openings
- Stable signal bristles and strong colouring for easy retrieval from the plaster surface
- Reusable, easy to clean

NEW

Application examples

After formwork removal and pull-in of the supply conduits, the signal cover is inserted into the installation opening.

The red signal bristles are flexible during the smoothing process and do not hinder this work step but, at the same time, are stable enough to keep the position in the plaster surface recognisable.

In addition to being able to use the HaloX® front parts with fixed exit opening, these can also be inserted into the universal HaloX® front parts.

In the case of factory-fitted HaloX® housings for one of the system magnets (e. g. 1299-69), the signal covers allow the recess to be smoothed or filled over the entire surface.

Signal cover

- Protects the interior of the housing
- Three stable signal bristles and strong colouring for easy retrieval from the plastered rough ceiling.
- Serrated edge structure for a clean installation opening

NEW

For installation opening	68 mm	75 mm	80 mm

Styrofoam moulded parts

HaloX® housing with Styrofoam moulded part for customised solutions. The mouldings are available in any shape (round, square, rectangular or triangular) and in various thicknesses or to suit your specific needs. They can be supplied ready-mounted to the housing or provided separately. A facing concrete version is also available. The Styrofoam moulded parts for facing concrete have an additional elastomer sheath, and its elasticity prevents the dry concrete from cracking.

- For individual installation openings
- Any shape possible (for round, square, rectangular and other installation openings)
- For in-situ or prefabricated concrete
- Prevents discolouring and sand blast dust in facing concrete version
- For exact flush finishes in facing concrete without reworking

Planning instruction

Almost every conceivable shape can be realised using the Styrofoam moulded parts. The maximum dimensions of the front parts (diameter/diagonals) result from the maximum dimensions of the respective housing front rings. Please note that the clamping range of luminaires and loudspeakers must be at least the thickness of the Styrofoam moulded parts plus 8 mm. In the case of Styrofoam moulded parts with a thickness of > 20 mm, take into account the support provided.

Styrofoam moulded parts

- For individual installation openings (round, square)
- With maximum diameter up to 300 mm and max. height up to 50 mm
- For all housings with Art. No. 12XX-XX

HaloX® system for retrofitting in concrete ceilings

for luminaires and loudspeakers

HaloX® 100 installation kit

HaloX® 100 installation kit can be retrofitted in existing slab ceilings (50 mm thickness and greater) with or without transformer tunnel.

- For retrofitting in slab ceilings
- Minimal effect on statics
- Large selection of opening sizes up to Ø 100 mm
- Extension rings for bridging the slab ceiling element and for increasing the luminaire installation depth

Note

For slabs thicker than 50 mm, the housing can be expanded in 10/25/50 mm steps using the extension rings.

HaloX® installation kit mounting

Cut drilling hole (Ø 150–160 mm) in the slab ceiling.

Combine the extension ring and front part to correspond to the ceiling thickness and installation depth.

Attach the housing and place in the drilling hole, mark and fasten. Install the conduit in the KSK entry.

If necessary, secure the fixed housing with wire to the reinforcement.

For retrofitting

HaloX® concrete installation housing for solid concrete ceilings can be inserted into existing and retrofitted drilling holes.

- For retrofitting in solid ceilings
- Minimal effect on statics
- Quick installation with snap-in connections
- Robust construction, ideal for use on building sites
- Large selection of opening sizes up to Ø 100 mm

Installation

Use the universal opening cutter to make accurate opening for the appropriate conduit sizes.

Join the housing components to correspond to the ceiling thickness and installation depth.

Now insert the complete housing, including the installation into the opening or drilling hole. Then...

...fill the free space with concrete and compact it. A formwork board fitted underneath prevents the concrete from running out.

HaloX® housing for drilling holes in solid ceilings

- for retrofitting in solid ceilings
- required hole size Ø 150-160 mm
- Take into consideration the ceiling thickness - at least 3 cm concrete cover is needed on top of the box
- suitable for front parts with Art. No. 1281-XX

Ceiling exit (CE) Ø	0-100 mm
Depth incl. front part	133 mm
LED wattage max.	20 Watt
Lamp wattage max.	50 Watt
Diameter	130 mm
Art.-No.	1290-30
Inner packaging/shipping	- / 10

HaloX® extension rings

- for increasing luminaire fitting depth
- to be clipped between the front part and the housing
- Multiple extensions possible

Height	10 mm	25 mm	50 mm

Tolerance compensation

Depending on the installation diameter, at a later date you can correct inaccuracies which occurred during the laying of the slab ceilings. Use the KAISER VARIOCUT hole cutter to make accurate installation openings in the front parts.

HaloX® 180

HaloX® 250

HaloX® concrete installation housing (precast concrete)

System HaloX® is designed as a single piece for fitting in precast concrete. The housings can easily be aligned on the formwork table by means of markings on the housing. The housing with pre-fitted mineral fibreboard allows easy glueing and the housings can be turned by 360° on the formwork table even after glueing. Housings with pre-fitted front parts to hold the system magnet (Art. No. 1299-69/1299-70) are available for magnet attachment. Laying tolerances which may occur during the fitting of panel elements are compensated for via the housing sizes in connection with a variable cut-out area. Because of the compact dimensions of the housings, the reinforcement can easily be placed around the housing. For luminaires or loudspeakers with installation depths equal to or greater than 110 mm, the installation compartment of the HaloX® housings can be increased on the on-site concrete building site by means of extension rings. The fitting of the conduits on-site takes place without the need for tools for M20/M25 conduits without any internal shortening of the conduits.

- For precast concrete slab ceilings and wall elements.
- 3 housing sizes with and without tunnel
- Single-part housings with integrated mineral fibreboard for easy adhesive fixing
- One-part housings with plastic panel for magnet attachment
- Toolless entry technology for M20/M25 conduits
- Compensation for laying tolerances on the concrete building site
- Optimal heat management thanks to maximum surface contact with the concrete

Installation

Mounting of the single-piece housing with mineral fibreboard...

...fitting of the one-part housing by means of system magnet (Art. No. 1299-69/1299-70).

Prefabricated element with integrated HaloX® housings is laid on concrete building site.

Subsequent adjustment of the housing height on the building site.

Toolless combination entry of M20/M25 conduits with conduit stop - no later shortening of the conduits.

After fitting of the conduits, concreting on the planned ceiling thickness takes place with the on-site mixed concrete process.

Panel element laying tolerances can be compensated for using the universal front parts (see system overview).

Cut the installation opening e.g. with the PROFI cutter (Art. No. e.g. with 1081-10).

HaloX® system for precast concrete

Note: Housings with Art. Nos. 1282-76 and 1283-76 must be secured in the tunnel area against floating!

Peripheral bridges on the tunnel provide additional protection against possible floating. Re-bars can be laid on these and tightened together with the reinforcement.

Alternatively, tie lugs fitted at the end of the tunnel provide additional protection against the possible floating of the tunnel in precast concrete.

Installation housing ThermoX® LED

ThermoX® LED installation housing for the airtight installation of rigid and pivoting LED built-in luminaires in different ceiling constructions. The housing protects the surrounding material (vapour barrier foil, insulation etc.) against the high operating temperatures and the LED luminaires themselves from contamination, and creates an airtight separation. In combination with the thermal separation between luminaire and operating device, in this way a maximum operating lifetime is obtained.

- For installation in insulated hollow ceilings
- Retrofitting from underneath
- Toolless installation of the housing
- Guarantees airtight installation
- Rear surface structure ensures optimal heat management
- Permanent and secure retention of the luminaire in the housing

Examples of use

ThermoX® LED installation housings can be installed in seamless sub-ceiling constructions made of plywood...

...MDF board,...

...slab ceilings with single battens with overlying insulation...

...and installing plasterboard.

Temperature profiles ThermoX® LED (room temperature 25°C)

ThermoX® LED 9320-10
LED 6.6 W

ThermoX® LED 9320-11
LED 9 W

ThermoX® LED 9320-20
LED 8 W

ThermoX® LED 9320-21
LED 10 W

Air-tight installation and fire-preventive protection

The ThermoX® LED housing protects the surrounding material against the extremely high temperatures that may occur during the operation of LED lamps. The housing must be installed without any surrounding insulating material coating. This protective measure can be taken both for new constructions and for retrofitting. The LED housing allows for air-tight installation because it does not destroy the vapour barrier foil that contributes to the air-tight building shell. Because of their air tightness, LED housings are also suitable for use in all suspended ceiling systems where uncontrolled air exchange is to be avoided (e.g. climate or cooling ceilings) and dustproof installation needs to be achieved (e.g. prevention of dust particles due to material removal).

Installation

Make cut opening (e.g. with cutter PROFI – Art. No. 1081-20).

To expand existing installation openings from Ø 68 mm to Ø 74 mm using centering insert (Art. No. 1083-99).

Installation of the operating device (driver).

Feed connector from below through the entry of the LED installation housing.

Connection of the plug-in contacts. Feed the sealing element round the cable and insert into the opening.

Installation of the ThermoX® LED housing in the installation opening.

Inserting the spotlight into the housing.

Rear surface structure minimises pressure on the vapour barrier and ensures optimal heat dissipation.

Technical processing instructions/standards

- use only certified (EN 60598) luminaires which are suitable for direct installation on normally flammable materials

ThermoX® LED housing

- for rigid and pivoting LED luminaires
- circumferential airtight sealing lip
- Swivel trough for alignment of the luminaire

Air-tightness certificate

Guaranteed airtight housing for the energy-efficient electrical installation of luminaires. The appropriate certificate can be obtained from us or downloaded from our website.

EnoX® installation housing

EnoX® housing for luminaires and other devices in ceilings and walls which are produced in a lightweight design with an air-tight building shell. Variable installation space when there is insufficient room to install electrics in the insulation level.

- Air-tight installation in line with GEG energy-saving ordinance.
- No additional installation level is necessary
- For ceilings and walls in renovated and new buildings
- Toolless cable and conduit entry
- Thermally-protected installation space 300 x 200 x 55 mm
- ECON® technology for air-tight and toolless insertion
- FX⁴ technology for fast cavity wall installation

Installation technology for low-voltage luminaires

Temperature profile for room temperature 23°C

Low-voltage 35 W cool beam

Low-voltage 35 W Alu

Low-voltage 50 W Alu

Example of installation

Technical processing instructions / standards

- use only certified (EN 60598) luminaires which are suitable for direct installation on normally flammable materials
- only for insulation material with heat resistance > 250 °C
- use only tested heat-resistant cables (N2 GMH 2G) and temperature-resistant terminals (e.g. T100)
- use of electrical safety transformers up to 105 VA
- max. 35 W Cool-Beam, 50 W aluminium reflector, 6.6 W LED luminaires

Examples of use

The EnoX® luminaire and loudspeaker housing can be mounted on the rafters in alternating...

...as well as inside the rafter behind the vapor barrier film...

...or mounted in a cut-out in an OSB panel.

EnoX® creates flexible space for the electrical installation in the insulation level.

EnoX® - luminaire and loudspeaker housing

- for installing luminaires, loudspeakers, displays and much more
- Minimum distance inside: min. 40 mm all round
- integrated stress relief (retention force) in accordance with DIN VDE 0606 / DIN EN 60670-1
- only for insulation material with heat resistance > 250 °C
- use only tested heat-resistant cables (N2 GMH 2G) and temperature-resistant terminals (e.g. T100)
- for installation devices up to LxW 120 x 220 mm or Ø 120 mm
- Heat distortion resistant to 220°C
- with 4 screws (FX⁴)

Product-Data

Length x Width x Depth	368 x 268 x 60 mm

ThermoX® installation housing

ThermoX® installation housing for installing halogen and pivoting recessed LED luminaires in various ceiling structures. The housing protects the surrounding material (moisture barrier foil, insulation etc.) from the lamp's extreme operating temperatures and creates an air-tight closure.

- Installation housing for halogen luminaires (low voltage and high voltage)
- Fire-preventive and air-tight
- For insulated hollow ceilings
- Two different front part types
- Integrated transformer closing cap
- Ceiling exits (CE) up to Ø 86 mm
- Installation from either above or below

Installation technology for low-voltage and high-voltage luminaires

Slab ceiling / Installation from above: during ceiling installation

Cut the installation opening and insert the housing from above. The shape of the front part ensures a secure and precise fit in the boarding. After the luminaire has been installed, the opening is completely concealed.

Slab ceilings / Installation from below: retrofitting

Cut an installation opening, insert the housing from below and fix in place with a fast screw attachment. The housing is attractively concealed by the KAISER decorative covering and the luminaire.

Plasterboard / Installation from below: retrofitting / smoothing

Before installation, check the required installation depth! Cut the installation opening, chamfer the bottom edge of the installation opening. Insert the housing from below and fix in place with a fast screw attachment.

Plasterboard / Installation from below: retrofitting with mineral fibreboard

Cut and chamfer the installation opening. Insert the housing from below and fix in place with a fast screw attachment. Mark opening for luminaires and cut. Smooth the joint or simply wallpaper the surface.

ThermoX® housing for low and high-voltage luminaires

- for halogen luminaires and pivoting LED luminaires
- max. installation height for low-voltage luminaire 65 mm, HV luminaire 70 mm
- Heat distortion resistant to 220°C
- lamp wattage LV: max. 35 W with AL reflector / 20 W Cool-Beam
- lamp wattage for HV luminaires max. 35 W with AL reflector (socket GU 10)
- max. LED lamp output 6.6 W
- Front can be used on both sides

Spacer

The spacer for the installation of swivelling built-in halogen and LED luminaires in various ceiling constructions. The housing ensures the necessary distance between the luminaire and the surrounding material. In this way, materials such as the moisture barrier and insulation are efficiently protected against the luminaire's high operating temperatures. This protective measure can be provided for both new buildings and retrofitting work. The housing is suitable for installation diameters between 68 and 80 mm, and can be adapted for use with different installation heights from 40 to 100 mm. After installation, the spacer stands securely on the boarding. This means that the installation diameter is fully retained and guarantees a secure fit.

- Installation in \varnothing 68 – 80 mm openings
- Maximum flexibility: Installation height from 100 – 40 mm
- Independent of boarding material and thickness
- Secure fit by means of installation on the ceiling
- Use with all standard LV / HV / LED lamps

ONE FOR ALL

Examples of use

The spacer for installing luminaires in insulated hollow ceilings can be used in jointless false ceiling constructions made of chipboard,...

...MDF board,...

...in panelled ceilings with single battens...

...and suspended ceilings clad with plasterboard.

Spacer

- for installation in insulated hollow ceilings
- retrofitting from below
- toolless mounting
- For \varnothing 68 – 80 mm installation openings

Fire-protection boxes

- Safe, visibly certified fire protection
- HWD fire-protection boxes for fire-protection walls and ceilings, as well as shipbuilding walls
- Smokeproof and halogen-free
- Also suitable for retrofitting

Solid wood

- Maintains the F30-B to F120-B fire resistance duration
- Toolless installation thanks to rib fixing
- Innovative cable entry enables tolerance compensation of the cable route

Sealings

- Safe, visible and certified protection through the use of KAISER sealing systems for cables and conduits, as well as cable and conduit bundles
- Automatic sealing of the joints and gaps between cables – no filling and smoothing
- Europe-wide approval for fire barriers

Shipbuilding

- For ship cabin walls and ceilings B15
- Ideal for pre-assembled cables
- Certified by DNV applied
- Maintains the wall's sound insulation protection

Fire-protection housings

- Safe, certified fire-protection housings for built-in luminaires and loudspeakers in fire protection ceilings.
- Integrated fire-retardant coating maintains the fire resistance class F30 (EI30) of the ceiling in fire protection ceilings.
- They prevent fire and flue gases from spreading, thus securing escape routes in buildings
- Suitable for fire resistance from above and from below

AFS – Active Fire Stop

Guarantees preventive fire protection. Whether fire load from above, below, from the front or the back: the quick-active fire-retardant coating in boxes, housings and bulkheads reacts immediately in case of fire and foams out the installation opening safely. The fire resistance class F30-F120, EI30/EI60 or EI30-EI120 of the wall of or the ceiling of F30-F90 or EI30-EI90 remains unchanged. The transmission of fire and smoke is thus safely prevented. In case of fire, the KAISER AFS technology maintains the fire protection class in walls and ceilings even when installed opposite each other without encasing. The ready-to-install systems with AFS technology guarantee certified safety and smooth installation.

- Fire protection – without encasing
- Smokeproof and halogen-free
- For walls and ceilings
- For buildings and shipbuilding
- Maintains the wall's sound insulation protection

Sound insulation value $R'w$ up to **56 dB**

Flush-mounting fire-protection box

In solid construction F30-F120 or EI30 - EI120 fire-protection walls, the fire-protection box receives the fire-protection period classification instead of fitted electrical installations. Even if the minimum wall thickness of 60 mm is not achieved in single-sided installation, or even in directly opposing installation, the fire-protection box ensures secure and smoke-proof room separation. In the event of a fire, the integrated fire-retardant coating quickly and reliably seals the installation opening, so preventing smoke and flue gas from spreading. At the same time, the risk of the fire spreading because the remaining wall is not thick enough is prevented.

- For F30-F120 or EI30-EI120 fire-protection walls
- For minimum remaining wall thicknesses ≤ 60 mm
- Also for directly opposing installation
- Variable combination connection piece for conduits up to M25
- With fire-protection cover, can be used as a junction box
- Maintains the wall's sound insulation protection

Examples of use

For F30-F120 or EI30-EI120 fire-protection walls.

For one-sided (minimum remaining wall thicknesses ≤ 60 mm) and for directly opposing installation.

Installation also possible in combinations.

With fire-protection cover (Art. No. 1184-94) can also be used as a junction box.

Flush-mounting fire-protection box

- for F30-F120 or EI30-EI120 fire-protection walls
- also for minimum remaining wall thickness ≤ 60 mm
- also for directly opposing installation
- with 4 screw domes and 2 expanding claw fields

HWD 90 cavity wall boxes

HWD 90 cavity wall boxes for F30-F120 or EI30-EI120 fire-protection walls ensure certified and fire-protection compliant electrical installation. They are now also approved for timber walls in F30-B/F60-B timber frame or timber panel construction. No additional measures, such as encasing, are necessary. The intelligent AFS technology reacts immediately to fire and heat and automatically closes the installation opening. This guarantees the fire resistance class of the fire-protection wall and secures emergency routes. Use in all fire-protection walls and the fire-resistance duration of up to 120 minutes ensures maximum flexibility, even when the planning is changed. At the same time, it also maintains the wall's sound insulation requirements.

- For F30-F120 or EI30-EI120 and F30-B / F60-B fire-protection walls
- Maintains the wall's sound insulation protection
- Retrofitting also possible
- With fire-protection cover, can be used as a junction box
- Also for directly opposing installation

Processing instructions

Approved for directly opposing installation.

In an F30-B wall, combinations of up to 5 boxes are possible...

...in an F60-B wall, individual boxes up to a 3 box combination are possible.

The HWD 90 electronics box is also approved for the above mentioned wall constructions.

For drywall in timber construction

Since the introduction of the first fire-protection box for fire-protection walls in 2006, the range of applications has been continually expanded. HWD 90 fire-protection boxes are now also approved for timber walls in timber frame or timber panel construction. They maintain the fire protection properties of the wall with a fire-resistance duration of F30-B and F60-B. No additional measures, such as encasing, are necessary. Even if installed on the directly opposing side, the fire protection of the wall is guaranteed for 30 minutes and 60 minutes. It should be noted that for F60-B, only superstructures and installations in accordance with the timber construction guidelines are currently permitted. The HWD 90 was tested in different superstructures that occur in practice to the superstructures and installation situation described in the timber construction guidelines.

Drywall in timber construction

The proven installation has not changed. Installations directly opposing each other are possible even in timber construction up to fire resistance class F30-B (max. 5-way combination) or F60-B (max. 3-way combination). All HWD 90 type boxes maintain the sound insulation function completely up to a sound insulation level of 77 dB.

1 9.5 mm plasterboard | **2** 15 mm OSB/MDF, plywood or chipboard | **3** 40 mm wood fibre insulation, glass or rock wool 60x40 wooden beams | **4** 1x12.5 mm plasterboard fire protection board | **5** 80 mm mineral insulation > 1,000°C - 40x80 wooden beams

Note

All technical specifications correspond to the tested and approved applications. Technical deviations or changes are possible in the approvals and must be checked before use.

Installation

Cut an installation opening with EXPERT cutter Ø 74 mm (Art. No. 1082-40).

The exact opening for the cable is created smokeproof with the KAISER universal opening cutter (Art. No. 1085-80). Set the opening cutter for 3 x 1.5² to Ø 8.5, for 5 x 1.5² to Ø 9.5 and for 3 x 2.5² to Ø 9.5.

Fixing of the boxes with tried-and-tested cavity wall technology using KAISER FX⁴ technology.

The fully-insulated through-wiring of one-gang junction boxes with each other is created using the support connector (Art. No. 9060-78).

Plasterboard drywall

Minimum wall thickness: 100 mm | boarding on both sides with | min. 12.5 mm mineral non-combustible building panels (e.g. plasterboard, cement-bonded fibre boards) | min. 40 mm thick non-combustible mineral wool (e.g. glass wool, rock wool, etc) | gross density min. 14 kg/m³

Installation shafts and ducts

The use of the HWD 90 in shaft walls is only approved in Germany by the general type approval. If the device is to be used in other countries, the applicable certificates, standards, guidelines or regulations must be observed. Steel stand | double boarding with non-combustible mineral plaster or cement-bound building panels | 2 x 20 mm (when using the one-gang box) | 2 x 25 mm (when using the one-gang junction box) | I30 - no insulation | I60 - 40 mm / 100 kg/m³, 60 mm / 50 kg/m³, 80 mm / 30 kg/m³ | I90 - 40 mm / 100 kg/m³ Termarock 100

Note

In addition to the general type approval from the DIBt, we can also provide you on request with the classification report on its recognition in Austria from the IBS Test Institute for Fire Protection Technology and Safety Research in Linz. Please note: the use of the HWD 90 in shaft walls is only permitted in Germany by the general type approval. If the device is likely to be used in other countries, the applicable certificates, standards, guidelines or regulations must be observed.

FlamoX® fire-protection putty

- Building material forming an insulating layer
- for filling joints as well as bonding board materials

Electronics box HWD 90

The HWD 90 electronics box maintains the wall's fire resistance class up to F120 or EI120 and creates installation space for electronic switch devices, data boxes, cables and terminals. The electronics box allows population with cables and also with installation conduits up to M25.

- For fire-protection walls F30-F120 or EI30-EI20
- Retrofitting is possible
- Also for use as a double box
- Extra-large terminal area for communications and network technology
- Additional space for electronic components (KNX actuators, relays, radio module, communications technology)
- Maintains the wall's sound insulation protection

Sound insulation value R'_{w} up to **77 dB**

Examples of use

The electronics box provides space for all possible installations e.g. KNX actuators, Venetian blinds relays, alarm modules and many more.

Also ideal for network connections. The generous box volume offers sufficient space for cable reserves.

The electronics box can also be used as a double box, e.g. for switch and socket combinations.

Electronic box HWD 90 can now also be used in IE30 and IE60 walls in timber frame or timber panel construction.

Electronics box HWD 90

- For cables and conduits up to M25
- Also for use as a double box
- For fire-protection walls F30-F120 or EI30-EI20
- minimum wall thickness 100 mm
- For equipment inserts and electronic components
- Tunnel twin-chamber box with enclosed separator wall and cover that can be wallpapered over.
- Can be combined with each other and also with HWD 90 one-gang junction boxes

HWD 68+ fire-protection box

NEW

Sound insulation value $R'w$ up to **69 dB**

The new generation of KAISER fire protection boxes combine all the features of the HWD 68 and HWD 90. In addition, they cover all possible applications that occur in practice with the conduit entries. Thanks to the evaluated AFS technology, the HWD 68+ also guarantees a fire resistance duration of F30-F90 or EI30-EI90. The HWD 68+ also fulfils the F30-B-F90-B fire resistance duration in timber frame and timber panel construction as well as in cross-laminated timber construction. The HWD 68+ enables almost unrestricted and universal electrical installation in fire protection walls.

- For F30-F90 or EI30-EI90, F30-B to F90-B fire-protection walls
- Maintains the wall's sound insulation protection
- Toolless cable and conduit entry
- For installation openings \varnothing 68 mm
- For a directly opposing installation
- With fire-protection cover, can be used as a junction box

Application examples

6 cable entries up to \varnothing 13 mm and two conduit entries up to M25.

Application in walls from a wall thickness \geq 100 mm with and without insulation.

Can also be used in timber frame or timber panelled walls...

...as well as in cross-laminated timber walls.

Processing instructions

For installation openings \varnothing 68 mm and combination distance 71 mm.

Toolless cable and conduit entries.

Fully insulated through-wiring of one-gang box and one-gang junction box with the support connector (Art. No. 9060-68).

Can be combined up to 5-way combinations directly opposing.

Note

All technical specifications correspond to the tested and approved applications. Technical deviations or changes are possible in the approvals and must be checked before use.

Installation

Cut Ø 68 mm installation opening using PROFI cutter (Art. No. 1081-10).

Create combinations with a distance of 71 mm.

Insert cables or conduits into the box through the appropriate openings.

Place the boxes in the installation opening and fix them by screwing on the screws.

Create through-wiring for combinations with the support connector (Art. No. 9060-68).

Use installation accessories. Directly opposing combinations up to 5-way possible.

Approved for F30 fire protection walls without insulation and F60-F90 with glass wool or mineral wool insulation.

With fire-protection cover (Art. No. 1184-94) can also be used as a junction box.

HWD 68+ one-gang box

- For F30-F90 or EI30-EI90, F30-B to F90-B fire-protection walls
- also for directly opposing installation
- from wall thicknesses of 100 mm
- can be combined with each other and with the one-gang junction box

Subject to modifications

NEW

PROTECT® solid wood fire protection one-gang junction box

The new solid wood PROTECT® one-gang junction box has been specially developed for the requirements of installation in solid wood elements / CLT. Fastening with ribs and the innovative cable entries ensure optimum and standardised installation in a solid wood element in visible wood quality without additional cutting or effort. Thanks to their arrangement and design, the innovative cable entries ensure flexible cable entry and thus compensate for the installation tolerances that arise when routing cables in the solid wood element. In addition, the PROTECT® solid wood fire protection one-gang junction box maintains the fire resistance of the solid wood element from F30-B to F120-B without the need for additional encapsulation.

- Maintains the F30-B to F120-B fire resistance duration
- For a directly opposing installation
- Toolless installation thanks to rib fixing
- Innovative cable entry enables tolerance compensation of the cable route
- Simple and toolless cable entry up to Ø 11.5 mm
- For installation openings Ø 74 mm
- Preserves the sound insulation properties of the solid wood elements

Application examples

Ideal for installation in CLT elements with visible wood quality.

For a directly opposing installation for walls ≥ 120 mm.

Allows up to 3-way combinations.

Can be used with fire protection cover (Art. No. 1184-94).

Processing instructions

For installation openings Ø 74 mm and combination distance 71 mm.

Toolless cable entries.

Optimum fastening thanks to ribs, even with additional boarding made of plaster-board.

The innovative cable entry ideally compensates for cable routing tolerances.

Installation

Installation openings
Ø 74 mm for combinations
with 71 mm centre distance.

Open the cable entry without
tools and insert cables up to
Ø 11.5 mm.

Align the one-gang junction
box using the markings and
insert it into the component
openings using the setting
tool.

Push in the one-gang junction
box flush up to an installation
depth of 60 mm.

Create through-wiring for
combinations with the
support connector (Art. No.
9060-68).

Fully insulated through-wir-
ing is carried out in the cable
entry area.

Directly opposing installation
for solid wood elements ≥
120 mm.

Allows up to maximum 3-way
combinations.

PROTECT® one-gang junction box

NEW

- For F30-B to F120-B solid wood elements
- Mounting with rib fixing
- Cable entry enables tolerance compensation of the cable route
- For directly opposing installation
- Preserves the sound insulation properties of the solid wood elements

All technical specifications correspond to the tested and approved applications. Technical deviations or changes are possible in the approvals and must be checked before use.

Ceiling box HWD 30

HWD 30 ceiling box guarantees F30 (EI30) to F90 (EI90) fire protection. If a fire starts, the integrated fire-retardant coating immediately generates foam and seals the opening in the ceiling. Even when retrofitted, the HWD30 ceiling box provides protection.

- For F30-F90 or EI30-EI90 fire protection ceilings
- Encasing is not necessary
- For installation of smoke detectors, motion detectors, etc.
- With a fire-protection cover, can be used as a ceiling junction box
- Retrofitting also possible

Examples of use

The HWD 30 ceiling box also lets you install for example presence and smoke detectors or LED emergency route lighting in fire-protection ceilings without endangering the fire resistance class.

Processing instructions

Without mineral wool, the installation corresponds to fire resistance class F30 (EI30).

If mineral wool in accordance with EN 13501 part 1 is used, the installation will withstand a fire up to fire resistance class F60 (EI60), and with Rock-wool/Termarock 100 up to fire resistance class F90 (EI90).

Allocation table for universal opening cutters

Cavity wall installation for HWD 90 fire protection boxes		Ø setting
NYM cable	3 x 1.5 mm ²	8.5
	5 x 1.5 mm ²	9.5
	3 x 2.5 mm ²	9.5
Support connector	9060-78	Connector

You can create smoke-tight cable entries with the prescribed strain relief easily and to the exact required size with the universal opening cutter (art no. 1085-80).

Installation

Cut installation opening Ø 74 mm using the cutter PROFI (Art. No. 1081-20).

Cut the exact opening for the cable with the KAISER universal opening cutter.

Fixing of the boxes with tried-and-tested cavity wall technology using KAISER FX⁴ technology.

The fire-protection cover for F30 ceilings has fire resistance class F30, for F90 ceilings it has fire resistance class F90.

Ceiling box HWD 30

- for fire protection ceilings F30-F90 or EI30-EI90
- For F30 (EI30) non-insulated fire-protection ceilings
- For F60 (EI60) fire-protection ceilings backed with mineral insulation materials in compliance with EN 13501 part 1
- for F90 (EI90) fire-protection ceilings with Rockwool/Termarock 100

Ceiling junction box HWD 30

- for fire protection ceilings F30-F90 or EI30-EI90
- For F30 (EI30) non-insulated fire-protection ceilings
- For F60 (EI60) fire-protection ceilings backed with mineral insulation materials in compliance with EN 13501 part 1
- for F90 (EI90) fire-protection ceilings with Rockwool/Termarock 100

HWD B15 cavity wall box for shipbuilding walls

HWD B15 cavity wall box for category B15 partitions reacts to a fire very quickly. The integrated fire-retardant coating intumesces and reliably seals the installation opening. The HWD B15 cavity wall boxes protect against fire and smoke in the fire-protection zone and preserve the B15 function of the fire-protection wall for at least 30 minutes of flames.

- For category B15 partitions
- Encasing is not necessary
- With fire-protection cover, can be used as a junction box
- Retrofitting also possible

Certified and designed for fast installation

Expensive and time-consuming encasing, i.e. metal, is avoided with the HWD B15 cavity wall box. The user is guaranteed a certified and fast installation.

Fire protection sealing for shipbuilding

The B15 PROTECT® fire protection sealing guarantees fire protection-related room separation in shipbuilding walls and ceilings. Fire, smoke and high temperatures are prevented from spreading due to the intumesce material that forms an insulating layer in the event of fire. Cable entries are safely, permanently and reliably sealed with the B15 PROTECT® multiple sealing and B15 PROTECT® cable sealing, thereby guaranteeing a room separation of 30 minutes.

- For ship cabin walls and ceilings B15
- For cables from Ø 4 - 12.5 mm multiple sealing
- For cables from Ø 4 - 15 mm cable sealing
- Ideal for pre-assembled cables
- Safe, certified fire protection solution
- Certified by DNV applied
- Without the use of fire protection putty
- Toolless installation
- Maintains the wall's sound insulation protection

NEW

Application examples

For cable entries through shipbuilding walls with category B15.

As well as shipbuilding ceilings B15.

Installation for wall thicknesses of 25 mm to 50 mm.

Ceiling mounting also for 25 mm to 50 mm panel thickness.

B15 PROTECT® cable sealing

- For shipbuilding walls and ceilings in the category B15 separation planes
- For pre-assembled cables
- For fire protection sealing of cable entries
- Without the use of fire protection putty
- Self-supporting sealing through insulation-forming material

Cable and conduit sealing systems for walls and ceilings

KAISER cable and conduit sealing systems have been specially developed to meet the requirements of electrical installations. They are characterised by their simple, fast and safe processing. Thanks to the integrated insulating layer of fire protection material, processing is possible without additional fire protection components, which reduces the risk of incorrect installation. All fire protection systems can be used in cavity walls as well as solid walls. In addition, the DS 90/74 and DS90/120 ceiling systems can be installed in concrete ceilings. The special feature here is the installation from the ceiling upper surface, which sets the systems apart from others on the market. In the cavity wall area, the systems have another special feature compared to conventional systems. They allow cable or conduit entries to be sealed off in the wall, as a reveal is not necessary.

Application examples

The KAISER sealing system for building installation – Everything at a glance

Cable sealing system LS 90, conduit sealing system RS 90

Pipe and fire-retardant systems for safe closure of passages and entrances in fire-protection walls. The certified retardants are quick and easy to install and can even be superimposed on cables and pipes retrospectively (EI90). In addition, the cable sealing system can also be used as a wall outlet that enables the connection of electrical attachments.

- Secure, visible, certified fire sealings
- For wall feed-throughs and entries
- Without filling and smoothing
- Automatic sealing of the joints
- For cables from Ø 5 - 15 mm
- For conduits M16 - M25

halogen-free

DIBt approval
General type approval

Europe-wide
ETA Certificate

Examples of applications for cable sealing system LS 90

Wall feed-through in plaster-board fire-protection wall.

Suitable for wall entry and wall outlet in dry construction fire protection wall.

Wall feed-through in a sand-lime brick fire-protection wall.

Wall feed-through in concrete fire-protection wall.

Secure wall outlet up to EI90 for connecting electrical attachments...

...like motion detectors.

Secure wall outlet up to EI90 for connecting electrical attachments...

...like wall lights.

Cable sealing system LS 90

- for EI90 fire-protection walls
- for wall entry, wall outlet and penetration
- without use of fire-protection foam or putty
- made of intumescent material
- automatic room separation of the installation opening
- unlimited building material shelf life

Box sealing system DS 90 / 74 mm

The box sealing system DS 90 / 74 mm for cables, cable bundles and conduits. The fire-proof and smoke-proof box sealing is quick and easy to install and can also be retrofitted on cables and conduits. The easy-to-fit product offers certified safety and ensures the fire resistance class of the wall (EI90).

- Secure, visible, certified fire sealings
- For wall feed-throughs and entries
- Automatic sealing of the joints and gaps between cables - no filling and smoothing
- Non-destructive retrofitting
- For cable bundles or individual installation conduits

halogen-free

DIBt approval
General type approval

Europe-wide
ETA Certificate

Examples of use

Use the two-part box sealing system DS 90 / 74 mm to create wall entries and feed-throughs.

Horizontal and vertical arrangement with a centre distance of 91 mm is permissible.

The box sealing system DS 90 / 74 can also be used as a spare seal (empty).

The sealing can accommodate conduits of up to M40.

Box sealing system DS 90 / 74 mm

- for EI90 fire-protection walls
- for wall entries and feed-throughs
- attachment using tried-and-tested FX⁴ metal plate screws
- with integrated sealing inserts
- ensures smoke-tight room separation (seals against cold smoke)
- unlimited building material shelf life

3D animation

Product-Data

Cut hole Ø	74 mm
Min. wall thickness	100 mm
Cable entries	Maximum population (internal diameter 40 mm)
DIBt approval for sound insulation walls up to	Z-19.53-2189 77 dB
CE	Yes
Art.-No.	9459-03
Inner packaging/shipping	10 / 100

Note

Cable population of the box sealing system DS 90 / 74 mm with all sheathed cable types recognised in Europe e.g. installation cables, data cables, telecommunication cables or fibre optic cables, as wiring bundles or as individual cables. Cable bundles can be populated up to $\varnothing \leq 40$ mm, with a maximum diameter of ≤ 15 mm for a single cable. Single cables can be used up to $\varnothing \leq 21$ mm.

Box sealing system DS 90 / 120 mm

The box sealing system DS 90 / 120 mm covers an additional range of applications in building fire protection. The increased diameter makes it possible to use a larger number of cables and electrical installation conduits and also greater diameters. With this system, it is also possible to mix the installation of conduits and cables. In addition, full population, as with the DS 90 / 74 mm, allows use of the system in all fields of building technology. Because no additional materials are used, non-destructive retrofitting is also possible. The tried-and-tested screw fixing permits clean, safe and secure installation.

- Secure, visible, certified fire sealings
- Seals wall feed-throughs
- Automatic sealing of the joints and gaps between cables - no filling and smoothing
- Non-destructive retrofitting
- Also for mixed population of bundles of cables and conduits

Sound insulation value $R'w$ up to **72 dB**

halogen-free

DIBt approval
General type approval

Europe-wide
ETA Certificate

Examples of use

Can also be used as a reserve sealing.

Full population with sheathed cables up to \varnothing 29 mm.

Mixing of cables and conduits.

Horizontal alignment is possible with a distance of 50 mm.

Box sealing system DS 90 / 120 mm

- for EI90 fire-protection walls
- attachment using tried-and-tested FX⁴ metal plate screws
- with integrated sealing inserts
- ensures smoke-tight room separation (seals against cold smoke)
- unlimited building material shelf life

Ceiling penetration sealing systems DS 90 / 120 mm and DS 90 / 74 mm

KAISER ceiling penetration sealing systems DS 90 / 120 mm and DS 90 / 74 mm ensure that the ceiling maintains fire-resistance class EI30 - EI90. To efficiently prevent the spread of fire and flue gases through cable penetrations and electrical installation conduits through concrete or cellular concrete ceilings, their fire sealing must have the same fire-resistance class as the ceiling. The ceiling penetration sealing system DS 90 accomplishes this easily, quickly and reliably.

- Secure, visible, certified fire sealings
- Sealing especially for ceiling penetrations
- Automatic sealing without filling or smearing
- Non-destructive retrofitting
- Also for mixed population of bundles of cables and conduits
- Easy and quick installation from above

halogen-free

DIBt approval
General type approval

Europe-wide
ETA Certificate

Examples of use

Use in EI30–EI90 concrete ceilings.

Use in EI30–EI90 cellular concrete ceilings.

Mixed population of cables and conduits up to maximum population. They can also be arranged as groups with a distance of 205 mm (DS 90 / 120 mm) or 125 mm (DS 90 / 74 mm).

Mixed population of cables and conduits up to maximum population.

Ceiling penetration sealing system DS 90 / 74 mm

- for fire protection ceilings EI30 - EI90
- Easy installation without filling
- Installation on the upper side of the ceiling
- creates a smoke-tight room separation

Formwork body

For preparation of installation in concrete ceilings, KAISER provides a formwork unit for matching cut-outs.

Adapt formwork unit to the ceiling thickness by cutting it to length.

Fix formwork unit with tie wire to the reinforcement.

After formwork removal, remove the formwork unit from the component opening without leaving any residues.

Formwork body

- creates matching component openings
- suitable for ceiling penetration sealing systems DS 90 / 74 mm
- for ceiling thicknesses 150 - 300 mm

FlamoX® fire-protection housing

FlamoX® installation housings for luminaires and loudspeakers protect lives and material goods if a fire breaks out. In luminaire and loudspeaker installations in fire-protection ceilings, the integrated fire-retardant coating gives the housings the fire-protection class F30 (EI30) of the ceiling. They prevent fire and flue gases from spreading, so they secure escape routes in buildings. FlamoX® fire-protection housings provide certified security.

- Safe, certified fire-protection housings for built-in luminaires and loudspeakers
- Fast, easy fitting from the underside of the ceiling
- Suitable for fire resistance from above and below
- Installation without additional suspension
- No use of additional fire protection materials or sealing compounds

Examples of use

Fire-stop housing for recessed luminaires...

...and for loudspeakers.

Mounting in suspended fire-protection ceilings F30.

Available in two sizes for a range of uses.

FlamoX® fire-protection housing

- for luminaires and loudspeakers
- Smokeproof and halogen-free
- for fire loads from above and below
- made of galvanised sheet metal with lining made of fire-resistant coating

International products

Fire-protection boxes are given the same period of fire resistance in fire-protection walls in spite of fitted electrical installations and ensure secure, smokeproof room separation. In the event of a fire, an integrated fire retardant quickly and reliably closes the installation opening and prevents flames and flue gases from escaping. This ensures that lives are saved and material goods are efficiently protected.

- For fire protection walls
- Retrofitting is possible
- For a directly opposing installation
- Can be used with fire-protection cover as a junction box

O-range® Protect³ one-gang box

- for F30-F120 or EI30-EI120 fire-protection walls
- also for directly opposing installation
- from wall thicknesses of 100 mm
- can be combined with each other and with the one-gang junction box

NEW

INNOVATION

Depth	49 mm
For panel thicknesses up to	7 - 40 mm
Cut hole Ø	68 mm
Screw spacing	60 mm
Support connectors for each package	5

AK2 modular system

- Universally combinable housing for cable support systems
- Basic housing AK2 with 10 break-out openings for cable or conduit entries, incl. 3 KBS 16 mm entries and 1 closing slider
- Front parts for system connectors from well-known manufacturers, e.g. WAGO and Wieland
- Front parts for 3 to 5-pole connectors and Keystone modules
- Front parts with SCHUKO® sockets 2- and 4-plug version
- Connectors and SCHUKO® sockets already pre-wired
- Different coloured front parts for easy differentiation of application areas
- Fixing on lower housing parts by simple latch-on
- Universal fastening solution for perforated grid and clamp attachments on many common cable support systems, such as cable trays or mesh cable trays

IP68 box

- Cable junction casing with 2-component PUR cast resin
- Delivery as a complete package ready for installation
- Ready for quick processing
- Fast commissioning
- IP68

Box for cable support systems. AK2 modular system

The AK2 modular system can cover a wide range of applications, as it offers the right solution for all installation tasks. The modular system consists of a basic box, a front part and attachment accessories in numerous variants. This allows individually configured boxes to be assembled for pluggable electrical installation.

Technical information

Modular AK2 Kit. Individually combinable distributor housings. System of housing base, front part and mounting adapter

Push the AT2252 housing base onto the selected mounting adapter until it snaps in.

Remove the KBS cable entries, break out the pre-stamped cutout at the desired location and insert the KBS.

Front part AK2-W5 enables the assembly with up to 5 connectors with 3 to 5 poles.

Pluggable, AK2 basic box

- Each article is packaged with 3x KBS 16 mm inlets and 1 locking slider
- Matching AK2 front part can be ordered separately
- Suitable for cable support systems from well-known manufacturers

Distribution box for data networks. AK2 Data.

The components of the AK2 Data series offer a modular system for creating a network infrastructure. Based on the AK2 modular system, the enclosures are specially designed for inserting data cables and accommodating RJ45 modules in Keystone format. Installation is virtually toolless, quick and easy, enabling a wide range of applications in office buildings and industrial plants.

Pluggable, AK2 Data basic housing with mounting plate

- 2 cable entries and 1 blanking plug are included per item
- Matching AK2 front part can be ordered separately
- Suitable for cable support systems from well-known manufacturers

Distribution boxes for light controls. AK2 DALI.

The front parts of the AK2 DALI series offer solutions when lighting control in building installation technology is implemented using the DALI standard. Just as the lighting components have a DALI interface, the front parts are equipped with DALI connectors. This means that the AK2 modular system can be used to implement flexible applications in building automation, for example to quickly and easily wire and individually control groups of luminaires.

Pluggable AK2 front part, Wieland GST18

- Wieland gesis® CLASSIC GST18® snap-in connector
- 5-pin for DALI applications
- Connectors are self-locking, can be released with tools
- Prefabricated with halogen-free connection wires 2.5 mm².

IP68BOX Outdoor Installation Set

Unpack, install, ready: complete cast resin package, fast initial operation. Watertight, unprotected outdoor installation. Including 2-component PUR cast resin in a mixing bag. When creating unprotected outdoor installations, it is important to manufacture a reliable and secure connection which will last for many years. For example, vibrations in the ground caused by traffic shouldn't affect the connection, which is designed for long-term operation – and this can be guaranteed with cast resin. Time-saving, too, because after the backfilling process, the IP68BOX can be buried and energised.

- Junction box IP65 (filled with the casting compound IP68)
- 2-component PUR cast resin in a mixing bag
- 3 M25 cable glands, clamping range Ø 11-17 mm
- Processing temperature: 0 to +35°C
- Operating temperature: - 40° to + 70°C

Processing instructions

Lay the underground cable and the cable junction box only in accordance with the legal regulations at the stipulated depth.

Remove separating strips, mix material for 3 - 4 minutes. (Bag contains 394ml, suitable for one box filling.)

Pour the casting compound into the cable junction box. Fill to 2 mm below the top edge of the cable junction box.

After closure (cover and sealing cap), the IP68BOX can be covered with earth and the power can be switched on.

IP68BOX Outdoor Installation Set

- Junction box IP65 (filled with the casting compound IP68)
- 2-component PUR cast resin in a mixing bag
- Max. conductor cross-section 6 mm²
- Nominal insulation voltage U_i: 690 V
- Connection terminals for flexible earth leads
- Sealing cap for ventilation
- Protective gloves
- mixed and solid cast resin can be disposed of in household waste

Solutions for a professional fibre-to-the-home network

Fibre-optic technology is today's state-of-the-art cabling technology for telephony, Internet and television not only in the wide-area network and street distribution but also in the **building distribution right down to the residential unit**. Fibre-optic cables transmit data optically at the speed of light. At the same time, fibre-optic technology offers a far higher bandwidth compared to conventional copper transmission technology. This enables the transfer of a significantly larger amount of information or data per unit of time.

Surface-mounted fibre-optic E3S Connect® subscriber connection

For upgrading existing houses

Flush-mounted fibre-optic E3S Connect® subscriber connection

For new buildings with high design affinity

E3S Connect® building distributor

The entry point for a fibre-optic networked home

For this reason, fibre-optic technology is the data transmission solution of the present and future. In addition to ever-increasing **data volumes**, **security** and **durability** are other important aspects. Fibre-optic cables can be laid over long distances without signal amplifiers. Fibre optics are resistant to ageing and weathering and are hardly susceptible to failure. Furthermore, fibre optics are resistant to chemical influences and insensitive to electrical and magnetic influences (EMC). Almost full eavesdropping security is also ensured compared to conventional copper lines.

Fast connections with low latency, high availability and enormous investment protection are therefore the absolute strengths of end-to-end fibre-optic networking. Fibre-optic technology is also particularly suitable for networking in build-

ings (residential buildings and businesses) in order to equip them with the highest possible bandwidth in a future-proof way. **The building transition point (BTP) / fibre optic termination point (FO-TP)** forms the transition from street distribution (network level 3) to building distribution (network level 4). At this transition, the responsibility changes from the network operator to the building owner. The responsibility of the network operator ends with the splicing and positioning of the individual optical fibres in the respective splice cassettes (closure of the operator network). The installation and cabling in the building is the owner's responsibility. The building network consists of the secondary area (vertical cabling) and the tertiary cabling (horizontal cabling).

E3S Connect®

The completely pluggable solution for a building network based on fibre-optics – network level 4 (NE4)

Continuous fibre-optic in-house cabling as a purely pluggable solution, here, with E3S Connect®, KAISER offers a complete product portfolio for setting up the NE4 building network. The installation of the fibre-optic connectors and connections is very simple, splice-free and toolless.

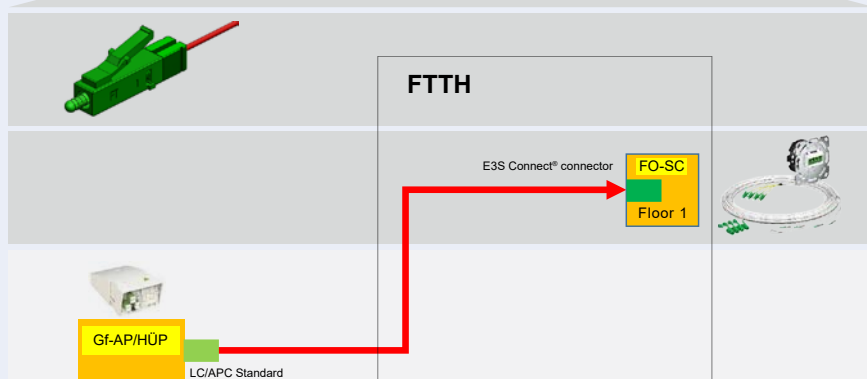

- Complete in-house cabling from KAISER
- No splicing only plugging
- Time saving per building / project
- Solution for the electrician
- Certified GHMT system

3D animation

Examples

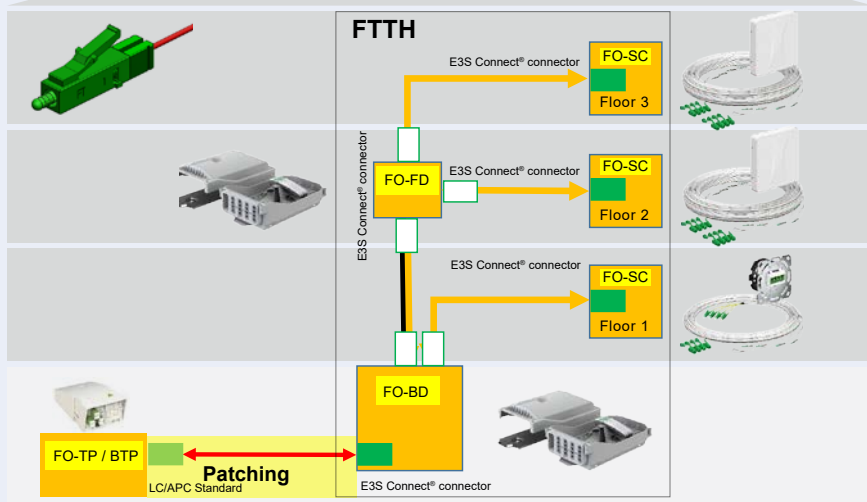

SFD – Detached house

Connection to the FO-TP (Building transition point / BTP / FO-TP)

The subscriber line is connected directly to the fibre optic termination point OP-TP / BTP) via standard LC/APC connectors and laid from the basement into the respective unit. There, the fibre-optic subscriber line is connected to the E3S Connect® connector or connected to the LC/APC connectors.

MFD – Apartment building

Connection to the FO-BD (Fibre-optic building distributor)

The **fibre-optic termination point** (FO-TP / BTP) is connected to an E3S Connect® building distributor using a system patch cable. The cable for the subscriber connection can be laid bidirectionally between the unit and the building distributor. Optional (depending on building topology): It is possible to use another building distributor as a floor distributor. These are connected to each other using E3S Connect® system cables.

KAISER offers a new and innovative product range for every application. With our comprehensive range, you also have the option of carrying out the complete in-house cabling as a spliceable variant or quite simply with our innovative E3S Connect® range as pluggable cabling.

E3S Connect® (pluggable)

Splicing

Whether **splicing or plugging**, all products can be easily identified by our picture identification and selected to fit exactly.

Further system and product information can be found in the KAISER Connectivity E3S Connect® main catalogue.

NEW

E3S Connect® (FO-SC) subscriber connection, surface-mounting with E3S fibre-optic cable for connection to the house transfer point (HTP)

The fibre-optic subscriber connection forms the termination point for fibre-optic cables in the home. The innovative and splice-free E3S Connect® system enables simple, fast expansion of the FTTH concept. The pre-assembled cables with E3S Connect® – LC/APC connectors can also be blown in, pulled in and pushed in. A handy roll-off box with different cable lengths enables precise planning and easy installation.

- Compact fibre-optic subscriber connection
- Dimensions: 85x85x16 mm (LxWxH)
- Colour similar to RAL9003 signal white
- with pre-assembled E3S fibre-optic cable in lengths of 10 - 100 m – other lengths available on request
- Available with 2 or 4 fibres
- High-quality fibre-optic cable G.657.A2 and BauPVo B2ca
- Cable retractable, insertable and blowable
- Pre-assembled cable is delivered in a handy unwinding box
- Subscriber connection enclosed

E3S Connect® (FO-SC) subscriber connection, flush-mounting with E3S fibre-optic cable for connection to the house transfer point (HTP)

Innovative fibre-optic subscriber connection with an installation depth of max. 32 mm for precise flush-mounting installation in all common one-gang junction boxes. The robust metal support ring with alignment markings allows convenient mounting with screw fasteners. Perfect fibre deposit management through a rotatable and removable deposit drum on the back. Equipped with 1x LC/APC Quad coupling including shutter and dust protection. Design compatibility with all common switch manufacturers with a standardised TAE cover.

- Design-compatible with all common TAE covers
- Installation in all KAISER one-gang junction boxes
- Overlength management
- with pre-assembled E3S fibre-optic cable in lengths of 10 - 100 m – other lengths available on request
- Available with 2 or 4 fibres
- High-quality fibre-optic cable G.657.A2 and BauPVo B2ca
- Cable retractable, insertable and blowable
- Pre-assembled cable is delivered in a handy unwinding box

E3S Connect® fibre-optic patch cable

The E3S patch cable forms the connection line between the house transfer point (HTP) and the fibre-optic building distributor in network level 4, for example in apartment buildings.

- E3S patch cable is available in 2m and 3m lengths
- Available as 2x fibre variant
- High-quality fibre-optic cable G.657.A2
- E3S LC/APC connector for connection to the FO building distributor
- Standard LC / APC connector for easy connection directly to the house transfer point

E3S Connect® building distributor

The innovative product design of the E3S Connect® building distributor is suitable for use with E3S Connect system cables to set up a fibre-based building infrastructure. The installation-friendly product design allows simple, fast and therefore time-saving assembly. The E3S Connect® system is based on purely pluggable components; splicing work is not necessary with this system!

- Flexibility for managing fibre-based building networks
- Plug & Play installation
- Flexibility for the in-house concept

NEW

Cable / conduit inlet

Suitable for max. 32 x E3S Connect® patch cables

E3S Connect® patch cassettes

Suitable for max. 8 x patch cassettes

Cable / conduit outlet

16 outlets
Suitable for Ø 5.5 – 10 mm

E3S Connect® building distributor

NEW

- Scope of delivery: building distributor including 4x patch cassettes, 4x mounting screws, sealing material, moisture absorber

Length x Width x Height	380 x 220 x 130 mm
Certificate	GHMT Channel Link (z7479a-22 ; c7479a-22)
Installation type	Surface mount
Protection class	IP65 (surface mounting)
Number of fibers	16
Patch cassettes amount	4
Patch cassette assembly max.	8
Connector quantity	4
Connector version	LC/APC Quad
Colour	grey - RAL 7035
Halogen-free	Yes
Loop length (patch cassette)	250 mm
Bending radius (patch cassette)	30 mm
Connector holder	SC DX / LC QD
Entry cable/duct	2
Cable/duct entry Ø	4,5 - 8,3 mm
Cable/duct output quantity	16
Cable/duct output Ø	5,5 - 10 mm
Art.-No.	4240001
Inner packaging/shipping	- / 1

Note

The E3S Connect® building distributor is only compatible with KAISER E3S Connect® subscriber connections, patch and system cables. Subject to modifications

NEW

E3S Connect® patch cassette

The innovative patch cassette is specially designed for the E3S Connect® building distributor and can accommodate 1x LC/APC QD connector. The patch cassette upgrades the building distributor to accommodate the E3S Connect® cables in order to set up a purely pluggable fibre-optic-based building network.

E3S Connect® patch cassette

E3S Connect® system cable

The E3S system cable forms the connection line between the FO building distributor and the FO floor distributor in network level 4, for example in apartment buildings.

- E3S system cable available in 5x lengths (10m, 15m, 20m, 25m and 30m) – further lengths available on request
- Available with 2 or 4 fibres
- High-quality fibre-optic cable G.657.A2 and BauPVo B2ca
- Retractable and blowable cable
- Fibreglass cable is supplied in a handy unroll box

E3S Connect® accessory box

The E3S Connect® accessory box is a comprehensive collection of tools, spare parts and cleaning equipment, specially developed for electricians and electrical installers working with the E3S Connect® system. This box offers a range of products to help you do your work more efficiently and reliably.

- E3S plug accessories
- Glass fibre cleaning tool
- Glass fibre tool
- Optical termination outlets
- LC/ DX connectors
- Can be combined with Sortimo and BS systems

E3S Connect® accessory box

NEW

- E3S Connect® accessory box equipped with:
- Cleaning tool: click cleaner for cleaning LC fibre optic connectors plugged into the connector, microfibre cleaning cassette for various fibre optic connectors, lint-free cleaning cloths for fibre cleaning
- Tools: screwdriver, Kevlar scissors, stripping tool
- Optical termination outlets: optical termination outlet flush-mounting (Art. No. 4252001), optical termination outlet flush-mounting (Art. No. 4250001)
- E3S Connect® spare parts: 25 x E3S Connect® housing, 25 x E3S Connect® locking element, 25 x E3S Connect® dust cap, 1 x LC/APC Quad connector, 2 x LC/APC Duplex connector

Depth x Width x Height	358 x 445 x 118 mm
Material case	Acrylonitrile butadiene styrene
Material lid	Polycarbonate
Own weight	2,5 {kg}
Loading capacity	25 {kg}
Art.-No.	4261011
Inner packaging/shipping	- / 1

E3S® Connect connector installation overview

1 After routing, simply plug the connectors together without tools.

2 Push the connector with the orientation surfaces towards the locking housing. The connector end must be flush with the housing.

3 Slide the locking housing with the slot over the cable ...

4 ... and press it forwards against the LC housing ...

5 ...until the two side hooks snap into the openings.

6 Note: The locking housing can only be pushed into the LC housing when the slot is facing upwards.

Building network – network level 4 (NE4)

Fibre-optic in-house cabling is understood to mean the comprehensive and complete building cabling from the fibre-optic termination point (FO-TP / BTP) to the fibre-optic subscriber connection (FO-TP) within the residential unit.

A distinction is also made within the building between secondary and tertiary cabling.

The secondary area comprises the cabling between the floors of a building. Cabling is also referred to as riser area cabling or building cabling. The secondary area comprises the cables from the FO-BD (fibre-optic building distributor) to the FO-FD (fibre-optic floor distributor).

The tertiary area is the horizontal floor cabling, the cabling within a floor of a building, and includes the cabling from the FO-FD (fibre-optic floor distributor) to the FO-SC (fibre-optic subscriber connection).

Examples

Connection to the FO-TP (Building transition point / BTP / FO-TP)

The subscriber cable is connected to the fibre optic termination point (FO-TP / BTP) via standard LC/APC connectors and is laid from the unit into the basement. There, the fibres are spliced onto a pigtail and connected to the LC/APC couplings.

Connection to the FO-BD (Fibre-optic building distributor)

The **fibre optic termination point** (FO-TP / BTP) is connected to a building distributor using a standard LC/APC patch cable. The cable for the subscriber connection is laid from the unit into the basement and spliced to a pigtail, then connected to the fibre optic building distributor (FO-BD) with LC/APC standard. It is possible to use another building distributor as a floor distributor.

Further building distributors and product information can be found in the KAISER Connectivity main catalogue

KAISER offers a new and innovative product range for every application. With our comprehensive range, you also have the option of carrying out the complete in-house cabling as a spliceable variant or quite simply with our innovative E3S Connect® range as pluggable cabling.

Splicing

E3S Connect®
(pluggable)

Whether **splicing or plugging**, all products can be easily identified by our picture identification and selected to fit exactly.

Optical termination outlet (OTO), surface-mounted

The optical termination outlet will be the termination point of the optical fiber cable within the appartement / home. At this stage the connection to the optical network termination will be realized via an optical patch cable, as well as to the further individual network connections via WLAN/LAN for example.

- Compact fibre-optic subscriber connection
- unequipped, partial equipped and splice ready availabel
- Overlength management
- Suitable for CSP (Crimp-Splice protection)
- Integrated strain relief

Montage

Create 5 mm drill holes.

Optionally, attach it to the KAISER installation box using device screws.

Fasten the fiber optic cable and engage the strain relief.

Optionally, fix the fiber optic cable with rear cable entry.

Insert the coupling in the desired position.

Insert, guide and put pigtails in place.

Lead fiber optic cable.

Perform splicing work and place the crimp splice protector in the holder.

Snap the housing cover into place.

Optical termination outlet (OTO), flush-mounting

The optical termination outlet will be the termination point of the optical fiber cable within the appartement / home. At this stage the connection to the optical network termination will be realized via an optical patch cable, as well as to the further individual network connections via WLAN/LAN for example.

- Installation in all KAISER one-gang junction boxes
- Partial equipped and splice ready available
- Overlength management
- Suitable for CSP (Crimp-Splice protection)
- Design-compatible with all common TAE covers

Robust support frame

made of die-cast aluminum. With breakable corners suitable for round desings

Harmonized design

for precisely fitting flush-mounted installation in all KAISER one-gang junction boxes

Perfect fiber management
thanks to a rotatable storage drum (max. 1.80 m) and up to 4x crimp splice connections

Installation depth of max. 32 mm
also enables mounting in existing installations

Design compatible
TAE cover, compatible with all common switch manufacturers

Available with LC „Quad” or SC „Duplex”
couplings for optimal strain relief through 17° angled output

Subject to modifications

Optical termination outlet (OTO), flush-mounting

Montage

Prepare the fiber optic cable for connection.

Pull off the fiber management drum.

Fix the fiber optic cable to the fiber management drum.

Place glass fibers on the fiber management drum.

Perform splicing work.

Take off the crimp splice protector.

Place the pigtails on the fiber management drum.

Latch the fiber management drum with the support ring.

Insert the pigtails into the coupling.

Optionally, adjust the fiber by turning.

Assembly using device screws.

Attach the design cover.

Optical termination outlet (OTO), partial equipped

· Scope of delivery: OTO,
1x LC/APC QD coupler

Optical termination outlet (OTO), surface-mounted with pre-assembled cable and cable entry from the backside

The optical termination outlet will be the termination point of the optical fibre cable within the appartement / home. Due to the pre-assembled cable in 7 different cable lengths, this variant forms an optimal solution for structured cabling in network level 4.

- Compact fibre-optic subscriber connection
- Dimensions: 85x85x16 mm (LxWxH)
- Colour similar to RAL9003 signal white
- Ready to splice with pre-assembled cable in 7x lengths (10m, 15m, 20m, 25m, 30m, 50m and 70m) - other lengths available on request
- Available with 2 or 4 fibres
- High-quality fibre-optic cable G.657.A2 and BauPVo B2ca
- Retractable and blowable cable
- Handy roll-off box with optimised installation aid

Available with 2x or 4x fibres

High quality fibre optic cable
G.657.A2 fibre and BauPVo B2ca
according to EN50575

Simple surface mounting
On the wall or suitable for all
KAISER built-in boxes

IP20

Convenient cable routing
Small cable diameter of approx. 3.0 mm, which means it
can be pulled in or blown in (from 7 mm micro tube)

Cable entry
2 versions available,
1 x bottom (wall mounting) and
1 x backside (wall mounting)

Optical termination outlet (OTO), surface-mounted

with pre-assembled cable and cable entry from the backside

Installation

Make 5 mm drill holes.

Optionally, fasten to the KAISER installation box using device screws or install it in a multimedia distributor.

One-gang box installed with micro duct.

Prepare the roll-off box for installation.

Connect the pull-in aid to the cable end and pull it into the empty duct.

Optional: for micro ducts < 12mm, the loop must be cut off. Fixing without pull-in loop.

Roll-off box is brought into the correct unrolling position. Optionally, the footrest can be folded out for better handling.

At the end, remove the optical termination outlet from the cardboard box and pull in the remaining cable.

Now mount the optical termination outlet exactly on the device box, wall or multimedia panel.

Latch on on the cover and plug the patch cable in to the router (optional).

Example (left): Installation with cable from the underside. Example (right): Installation with cable from the rear.

Example: Installation in the multimedia distributor.

Optical termination outlet (OTO), surface-mounted with pre-assembled cable and cable entry from the backside

Optical termination outlet (OTO), ready to splice, 2x fibres, backside

· Scope of delivery: OTO, LC/APC coupling, connector and fibre optic cable

Optical termination outlet (OTO), surface-mounted

with pre-assembled cable and cable entry from the bottom

Optical termination outlet (OTO), surface-mounted with pre-assembled cable and cable entry from the bottom

The optical termination outlet will be the termination point of the optical fibre cable within the appartement / home. Due to the pre-assembled cable in 7 different cable lengths, this variant forms an optimal solution for structured cabling in network level 4.

- Compact fibre-optic subscriber connection
- Dimensions: 85x85x16 mm (LxWxH)
- Colour similar to RAL9003 signal white
- Ready to splice with pre-assembled cable in 7x lengths (10m, 15m, 20m, 25m, 30m, 50m and 70m) - other lengths available on request
- Available with 2 or 4 fibres
- High-quality fibre-optic cable G.657.A2 and BauPVo B2ca
- Retractable and blowable cable
- Handy roll-off box with optimised installation aid

Available with 2x or 4x fibres

High quality fibre optic cable
G.657.A2 fibre and BauPVo B2ca according to EN50575

Simple surface mounting

On the wall or suitable for all KAISER built-in boxes

IP20

Convenient cable routing

Small cable diameter of approx. 3.0 mm, which means it can be pulled in or blown in (from 7 mm micro tube)

Cable entry

2 versions available,
1x bottom (wall mounting) and
1x backside (wall mounting)

Optical termination outlet (OTO), surface-mounted

with pre-assembled cable and cable entry from the bottom

Installation

Make 5 mm drill holes.

Optionally, fasten to the KAISER installation box using device screws or install it in a multimedia distributor.

One-gang box installed with micro duct.

Prepare the roll-off box for installation.

Connect the pull-in aid to the cable end and pull it into the empty duct.

Optional: for micro ducts < 12mm, the loop must be cut off. Fixing without pull-in loop.

Roll-off box is brought into the correct unrolling position. Optionally, the footrest can be folded out for better handling.

At the end, remove the optical termination outlet from the cardboard box and pull in the remaining cable.

Now mount the optical termination outlet exactly on the device box, wall or multimedia panel.

Latch on on the cover and plug the patch cable in to the router (optional).

Example (left): Installation with cable from the underside. Example (right): Installation with cable from the rear.

Example: Installation in the multimedia distributor.

- Retractable and blowable cable
- Handy roll-off box with optimised installation aid
- Compatible with all common TAE design covers

Optical termination outlet (OTO), flush-mounted

with pre-assembled cable from the backside

Installation

If necessary, detach the flush-mounted subscriber connection from the one-gang box or prepare it for installation.

Connect the pull-in aid to the cable end and pull it into the empty duct.

Optional: for micro ducts < 12mm, the loop must be cut off.

Fixing without pull-in loop.

Roll-off box is brought into the correct unrolling position. Optionally, the footrest can be folded out for better handling.

At the end, remove the sub-scriber connection from the cardboard box and pull in the remaining cable.

Now fit the subscriber connection exactly in the device box.

Fit the TAE cover. Plug the patch cable into the router (optional).

Optical termination outlet (OTO), ready to splice, 2x fibres, backside

· Scope of delivery: OTO, LC/APC coupling, connector and fibre optic cable

Simply handy. KAISER roller box.

The handy roller boxes for the pre-assembled subscriber connections offer a convenient packaging unit and are also an optimised installation aid in network level 4 cabling.

In addition, the round cardboard inlay facilitates easy, space-saving unrolling of the fibre-optic cable without having to remove the subscriber connection.

The compact dimensions of 266×256×54 mm (L×W×H) as well as the double-sided readable product label (front & cover side) offer advantages both for assembly and storage.

Handling

- Fold out the break-out opening for improved stability and rolling of the cable (footrest)
- Position the cardboard box upright and simply unroll the fibre-optic cable out of the pre-defined cable opening
- The inlay with the subscriber connection rotates to fit exactly in the cardboard box
- At the end, remove the subscriber connection and the cable from the coil box and assemble them

Subject to modifications

Compact building distributor (Gf-GV)

The compact building distributor by the the KAISER GROUP is designed for up to 24x fibres and can be delivered in different configuration levels. The compact building distributor can also be used as a house transfer point. Various versions of the compact building distributor have been approved by „atene KOM“ and are suitable for use in subsidised projects.

- Flexibility in the management of fibre optic networks
- Protected plug connection, internal fibre optic coupling
- Removable box cover
- Flexibility in the FTTX concept.
- Structured fibre optic management.

Notes

Mechanical protection of the fibre optic management and easy installation are guaranteed. In addition, the compact building distributor has 6x LC/Quad, 6x SC/DX coupling breakouts. These can be supplied without coupling, equipped or partially equipped. The couplings are located inside the housing to prevent unauthorised access. The compact building distributor is lockable. In addition, there is the possibility of sealing the compact building distributor to prevent unauthorised opening.

Compact building distributor (Gf-GV), CSP, partially equipped

SYNTEC® synthetic cable gland

SYNTEC® synthetic cable gland with innovative lamellar technology including movable jointed lamellae and compression nuts for everyday use (cannot be overtightened).

- Made from high-quality, weather-resistant polyamide
- With short and long metric entry thread
- Standard/reducing sealing rings
- With environmentally resistant TPE sealing ring
- High level of strain relief and simultaneous distortion protection
- In two colours (light grey, black) from stock, other colours on request
- Good chemical resistance
- Protection class IP 68, waterproof
- Tested acc. to EN 62444

1 Lower part | 2 Lamellar | 3 Sealing ring | 4 Push-down nut

The nut's large-area hexagon always provides a safe and firm grip when turned by hand and tightened with the tool.

Short entry thread metric

Material: Polyamide PA 6
 Properties: halogen-free, black UV resistant (tested according to EN ISO 4892-2)

SYNTEC® brass cable gland

SYNTEC® brass cable gland with innovative lamella technology including movable jointed lamellae and overtightening-protected cap nuts for everyday use.

- Lamellae insert made from high-quality polyamide
- With short and long metric entry thread
- With environmentally resistant TPE sealing ring
- Standard/reducing sealing rings
- High level of strain relief and simultaneous distortion protection
- Protection class IP 68, waterproof
- Tested acc. to EN 62444
- Good chemical resistance

1 O-Ring | 2 Lower part | 3 Lamellar insert | 4 Sealing ring | 5 Push-down nut

Cable glands Syntec® nickel-plated brass with lamellar technology

Short entry thread metric

Material: Nickel-plated brass
 Sealing ring: TPE
 O-ring: NBR
 Lamellar insert: Polyamide PA 6
 Strain relief: Version A acc. to EN 62444
 Protection class: IP 68
 NEMA Type rating: 4X
 Operation temperature: -40 °C / +100 °C

One-piece sealing ring
 not overall length insulated

Synthetic cable glands Progress® GFK for installation of multiple cables

Synthetic cable glands Progress®

Synthetic cable glands Progress® are tried and tested helpers for correct cable entry in industrial equipment.

- Made from glass fiber reinforced, weather-resistant polyamide
- With environmentally resistant TPE sealing insert
- High level of strain relief and simultaneous distortion protection
- High chemical resistance
- Halogen-free
- Protection class IP 68
- Tested acc. to EN 62444

STRONGER FASTER SMARTER

Start-to-finish-victory thanks to the innovative
Evolution EMC cable gland.

EMC Technology simplified.

The **Evolution EMC** cable gland ensures the reliable and durable shield connection of shielded cables in electromobility applications. Its innovative design enables the shield contact to be repeatedly "plugged into" the cable gland's lower part, thus facilitating pre-assembly on the cable. Pre-assembled cable harnesses reduce installation costs, simplify production processes and are user-friendly. The system also allows this pre-assembly work to be carried out in the field using the battery-operated AXI PRESS tool. This enables cable harnesses to be repaired, and prototypes to be flexibly and precisely assembled. The **Evolution EMC** cable gland was specially developed for use in electrically powered vehicles and can therefore withstand the most demanding operating requirements.

1 Compression nut

Lead-free version in three sizes (M20, M25 and M32); Simplified installation; Just tighten to the stop (no torque required).

2 Sealing insert

Highest IP protection level; Anti-rotation design thanks to surface profile; Wide temperature range (-40 to +140°C).

3 Contact sleeve and supporting ring

The "pluggable" EMC shield contact solution facilitates quick and reliable installation; Ensures high-quality 360° contact.

4 Lower part

Lead-free design in three sizes (M20, M25 and M32); Large clearance for cable lugs to pass through.

For more information, see catalogue
„AGRO Cable Glands“

Montage

1. Push the cable lug through

2. Insert the contact sleeve

3. Slide over the sealing insert

4. Tighten the pressure nut

Multi Cable Entry MCE for well-sealed, process-reliable cable entries

AGRO has been developing and manufacturing high-quality cable glands in accordance with EN 62444 for over 65 years. The know-how gained from this in relation to radial compression fabrication of sealing items is now being used for the first time in cable feedthroughs. The specially-designed and reliable strain relief, together with the use of tested sealing units make MCE an innovative, extremely robust and dependable cable entry system. Multiple feedthroughs are widely used in various industries. They find application where a number of cables are to be fed, close together.

For more information, see catalogue „AGRO Cable Glands“

1 MCE system

- High process reliability
- Offers robustness and excellent sealing performance
- Also suitable for applications in challenging environments
- Pre-assembled systems can be efficiently installed on site
- No supplementary materials or lubricants needed for installation

2 Sealing elements

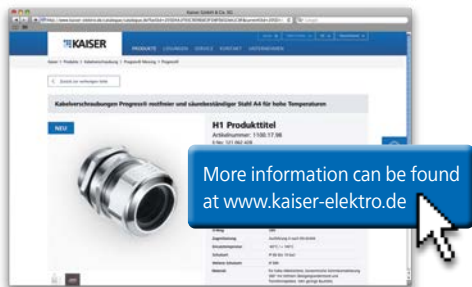

- Well-proven from millions of applications in standard cable glands
- Sealing according to IP68 (min. 0.1 bar for 30 minutes)
- Resistant to high pull-out forces
- Cable clamping range from \varnothing 5.5 to 21.5 mm
- Split for easy replacement if necessary

3 Housing

- High-strength half-casings of anodised aluminium
- Drilling pattern based on customary standard dimensions

General information

- Comprehensive overall programme with more than 3,500 products in our special cable gland catalogue or at www.kaiser-elektro.de
- Implementation of individual customer solutions
- CAD data

As an addition to our cable gland range, digital planning data are now also available in the EPLAN Data Portal.

Locking plug nickel-plated brass

Progress® multiLAYER, universal cable gland with maximum clamping range

1st digit Degree of protection against contact/foreign body protection		2nd digit Degree of protection against ingress of water	
IP testing		IP testing	
	0 No protection		0 No protection
<p>∅ 52,5 mm</p>	1 Protection against ingress of solid foreign bodies larger than 50 mm (unintentional touching by hand).		1 Protection against water dripping from above.
<p>∅ 12,5 mm</p>	2 Protection against ingress of solid foreign bodies larger than 12 mm (touching with fingers).		2 Protection against dripping water falling at an angle of up to 15°.
<p>∅ 2,5 mm</p>	3 Protection against ingress of solid foreign bodies larger than 2.5 mm (touching with tools, wires etc. thicker than 2.5 mm).		3 Protection against spray falling at any angle up to 60°.
<p>∅ 1 mm</p>	4 Protection against ingress of solid foreign bodies larger than 1 mm (touching with tools, wires etc. thicker than 1 mm).		4 Protection against splashes from any direction.
	5 Complete protection against contact. Protection against harmful dust deposits — penetration of dust is not completely prevented.		5 Protection against jets of water from any direction.
	6 Complete protection against contact. Protection against dust penetration.		6 Protection against temporary flooding e.g. by high seas.
			7 Protection against submersion in water at a specified pressure for an unspecified time.
			8 Protection against submersion in water at increased pressure for an unspecified time.
			9K Protection against the penetration of water during high-pressure (80-100 bars), high-temperature washdown applications (80° C)

Note

IP**: Protection class in accordance with EN 60529 up to 1000 V » and 1500 V = (UTE Standard C 200 10) or acc. to DIN 40059-9 We carry out tests for protection class IPx8 (pressure water) with a test plug, which does not provide any information about the maximum pressure with a cable. Please contact us if you want us to calculate this value in our laboratory using your cable.

MontaX mounting plate

MontaX mounting plate for attaching all types of devices and components in building interiors. May be used in plant engineering, machine construction and switchboard plants and for heating, ventilation and air conditioning applications, etc.

- More than 200 attachment possibilities
- Secure and fast installation of many devices

MontaX mounting plate

- over 200 fixing methods for accessories
- Injection-moulded connectors allow surfaces to be joined together effortlessly to form larger units
- Mounting plate can be split into two identical halves
- Attachment to cable ducts, round or square conduits, TS 35 standard profiles, etc.
- Magnet attached for adjustable mounting

Length x Width x Height	180 x 90 x 13 mm
Art.-No.	2000-00
Inner packaging/shipping	- / 10

MontaX mounting angle

MontaX mounting angle for secure attachment in almost all orientations and angles. With only one element, the MontaX mounting angle gives you 200 attachment possibilities in four different angular positions on standard profiles, square or round conduits, steel beams etc.

- For easy visual inspection of counters, indicator light etc.
- For easy and safe operation of switches etc.
- No voltage transfer as all plastic

Processing instructions

Mounting angle for MontaX

- for 30°, 45°, 60° & 90° angular attachment of MontaX to vertical axis
- simple straightening and attaching with 4.5 mm Ø raised head screws through keyholes
- mounting plate can be attached using self-tapping 3.9 mm Ø flat-head screws in mounting grooves

Art.-No.	2000-80
Inner packaging/shipping	- / 5

MontaX - Magnet

- for adjustable mounting
- comes with fixing screw

Art.-No.	2000-90
Inner packaging/shipping	- / 5

Flush-mounting

- Grinding heads for flush-mounting installation
- High precision and durability
- Professional system tools for professional and safe installation

Heat-insulation

- Tools for installation in insulation systems
- Professional system tools for professional and safe installation
- Reliable quality and innovative technology

Cavity wall

- Cutter for cavity wall installation
- Professional system tools for fast and safe installation
- Proven quality and innovative technology

System tools

- Professional system tools for precise opening of boxes and housings
- Perfectly matched to the processing and installation of KAISER electrical installation products

Diamond grinding head

Diamond grinding head for precise and quick installation openings for one-gang boxes and one-gang junction boxes in practically all types of walls. Clean and low-dust handling due to dust extraction.

- Quick creation of installation openings in all types of walls
- For electric drills with direct attachment or 13 mm chuck
- With optional dust extraction

Installation

Pre-drilling. Create centering hole at a combination distance for multiple boxes using drilling template.

Fit diamond grinding head and drill holes at Ø 68 mm or Ø 82 mm.

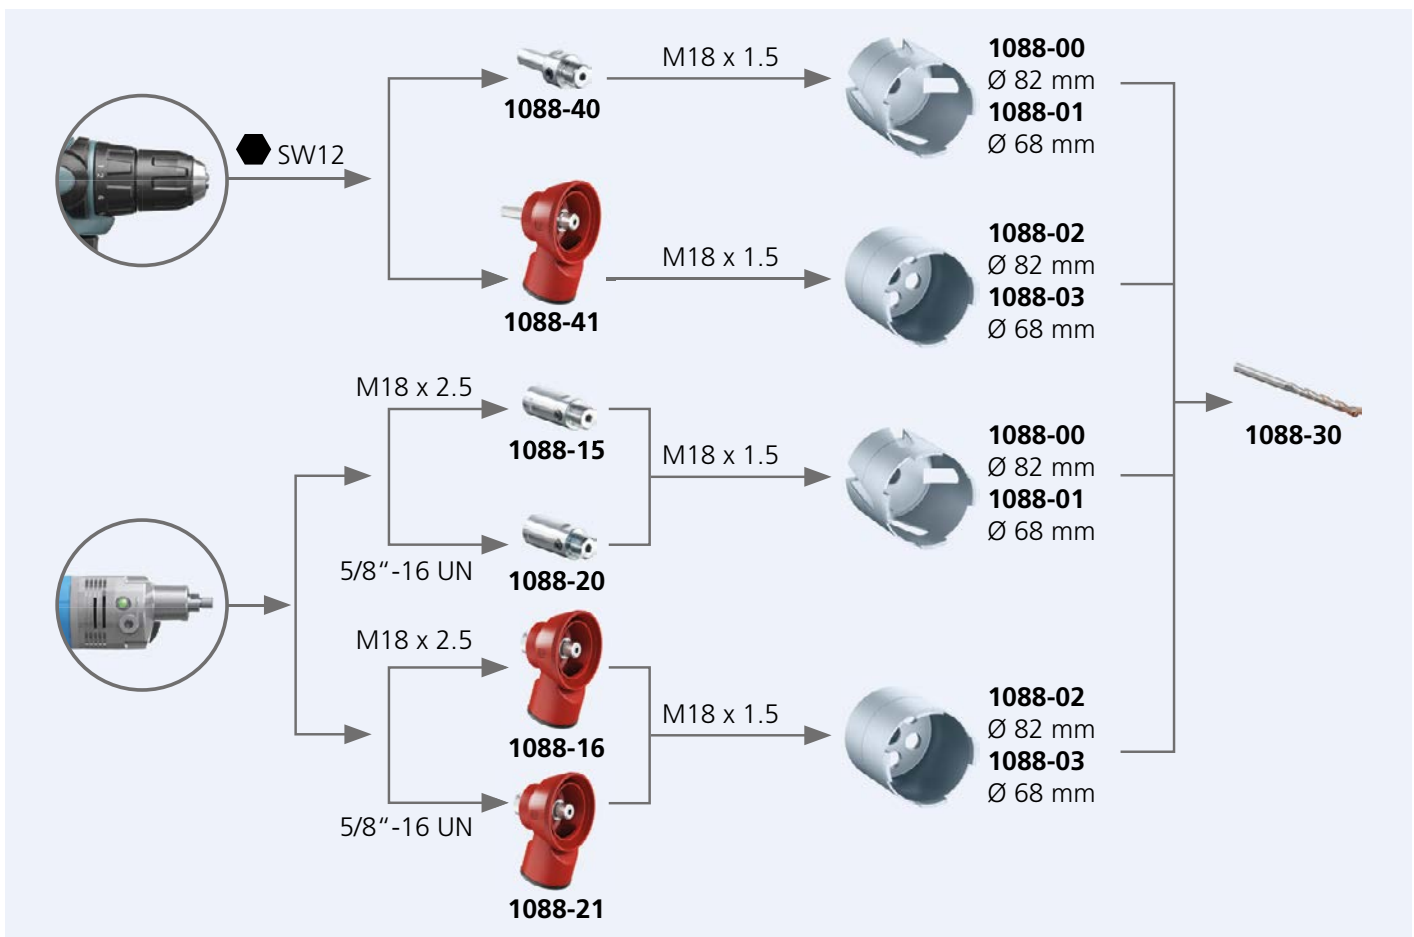

Chisel out the drill core completely.

Clean and even installation openings for quick box installation with plaster or KLEMMFIX®.

System overview – with and without dust extraction

Diamond grinding head with dust extraction

- Universal area of application
- For medium-hard masonry
- High service life
- Entry thread M18 x 1.5
- for screwing onto the dust extraction system

Health hazards due to construction dust

When drilling holes, fine dust is produced which, when inhaled, can penetrate deep into the lungs via the bronchial tubes and lead to serious health problems. The quartz dust produced when drilling into concrete, bricks and sandstone is particularly dangerous and can cause asthma, silicosis and tumours in the nose, sinuses, throat and lungs, among other things, as a long-term consequence. There is also the risk of asbestosis (pneumoconiosis) during renovation work in older buildings, as plasters, fillers and tile adhesives containing asbestos were still used until the ban on asbestos in 2005. Safe dust protection on the construction site is therefore extremely important for the health and safety of the workers. The most effective measure is the use of the KAISER dust extraction directly at the point of origin, which is available as a customised system with the KAISER diamond grinding head.

Flush-mounting and masonry tools

For masonry installation

Diamond grinding head without dust extraction

- Universal area of application
- For medium-hard masonry
- High service life
- Entry thread M18 x 1.5
- with side slits
- for screwing onto the direct attachment

3D animation

Drilling template

Drilling template for exact positioning of the centring holes for creating installation openings in masonry. The drilling template can be used to reliably and precise to create vertical or horizontal combination distances. This ensures that box combinations and subsequent switches and connectors can be professionally installed without reworking.

- Drilling template for exact marking of the centering hole
- For creating installation openings at the exact distance
- Suitable for masonry and drywall construction
- Vertical and horizontal application possible

Installation

Drill the first hole \varnothing 6 mm at the intended position.

Insert the guide pin into the hole and align the template horizontally or vertically using the spirit levels.

Further holes are drilled through the drill bushes.

The centring holes created serve as a precise guide for the diamond core bit.

Drilling template

- 2 spirit levels for vertical and horizontal alignment
- 71 mm for standard combinations
- 91 mm for separate covers on low-voltage equipment
- with hardened drilling bushes \varnothing 6 mm
- with fold-out guide pin for first drill hole

Art.-No.	1190-65
Inner packaging/shipping	- / 1

Marking chalk

- for marking of switch symbols and wiring instructions
- Colour: blue, waterproof

Art.-No.	1190-55
Inner packaging/shipping	- / 12

Spirit level cover

Spirit level cover for quick and exact precisely positioning of one-gang boxes and one-gang junction boxes in the masonry. The application is possible for both individual boxes and combinations of boxes.

- For all KAISER one-gang boxes and one-gang junction boxes, except UP¹ flush-mounting boxes
- Guaranteed horizontal or vertical fit of the screw domes
- Quick assembly in a single action

Installation

Prepare the wall opening with plaster as usual.

Insert the spirit level cover into the upper box.

Push the box combination into the wall opening and align.

The spirit level immediately indicates the perfect fit.

Spirit level cover

- practical box spirit level
- To straighten one-gang boxes and one-gang junction boxes for horizontal and vertical assembly with plaster

SPECIAL cutter for insulating boards

Retrofitting electrical connections to an already completed, insulated facade is a challenge. The SPECIAL cutters can be used to create installation openings without weakening the external composite thermal insulation system, as insulation is only removed at certain points.

- with depth stop to prevent heat bridges
- Hardened metal teeth enable use even with plastering
- easy removal of the drilled core

SPECIAL cutter Ø 20 x 80 mm for KAISER mini equipment carrier

The SPECIAL cutter Ø 20 x 80 mm with carbide cutters for exact installation openings. (Art. No. 1088-06).

The drilling depth stop ensures that only the amount of insulation material is removed that is necessary to secure the mini equipment carrier.

By simply unscrewing the cutter head, the drilled core can be removed quickly using a centering drill.

The insulating capacity remains intact despite the installation opening.

SPECIAL cutter ETICS Ø 20 x 80 mm

- Making installation openings in existing composite thermal insulation systems or lightweight walls
- Ø 20 mm, for the KAISER mini equipment carrier and for KAISER cable seals
- with depth stop to prevent heat bridges
- with hardened metal centering drill for precise positioning
- fits all battery-powered drills and electric drills with 10 mm chuck
- removable cutter head for easy removal of the drilled core

SPECIAL cutter Ø 68 x 180 mm for one-gang junction boxes ECON® Styro55

If a cable is present, you can drill 68 mm installation openings using even with the SPECIAL cutter.

The centering aid Ø 68 mm and depth stop on the cutter ensure a precise opening without damaging the existing cable.

The depth stop ensures minimal interference with the insulation, which prevents the creation of heat bridges.

KAISER SPECIAL cutter with depth stop, (Art. No. 1088-07).

Processing instructions

Make sure that the cable has been vertically fed through the insulation material panel. The SPECIAL cutter Ø 68 x 180 mm must not be used with cables which are directly under the plaster layer of the external insulation.

SPECIAL cutter ETICS Ø 68 x 180 mm

- Creating installation openings in existing external thermal insulation composite systems for an existing cable
- for ECON® Styro55 one-gang junction boxes
- fits all electric drills with 13 mm chuck
- with depth stop to prevent heat bridges
- including 2 centering aids Ø 68 mm (Art. No. 1090-68) for exact cutter guiding

PROFI cutter

The new PROFI cutter is the ideal tool for creating installation openings in drywalls. The fine saw teeth and precise drilling diameter are perfectly matched to the installation of KAISER boxes. The innovative trilo geometry of the cutter head ensures an improved operating life. In combination with the new centring drill, the drilled core can be reliably ejected, enabling fast work.

- longer service life due to new cutting edge geometry
- Faster installation thanks to reliable drilled core ejection
- With holder, centring drill, countersink hole cutter and drilled core ejector
- Specially for plasterboard, softwood and plywood boards
- Unique triangular-round cutter geometry for maximum hole precision

Technical information

Optimised cutting performance thanks to the innovative trilo geometry of the saw teeth.

PROFI cutter including holder, centring drill, spring and countersink hole cutter.

PROFI cutter for optimum installation openings in dry-wall walls and ceilings with plasterboard boarding.

Exact openings enable the professional installation of cavity wall boxes.

PROFI cutter

- high cutting power
- precise cut for circular drilled holes
- high radial runout accuracy
- Removable countersink hole cutter
- fits all electric drills with 13 mm chuck

Centering insert 68/74 mm – operation

The traditional box is removed from the Ø 68 mm installation opening

Centering insert 68/74 (Art. No. 1083-99) is inserted into the existing opening together with the Ø 74 mm cutter (e.g. PROFİ, Art. No. 1081-20).

The existing opening can easily be expanded to Ø 74 mm

Now the traditional installation box can be replaced by a sound insulation, fire protection or radiation protection box.

Centering insert 68/74

- for expanding existing installation openings from Ø 68 mm to Ø 74 mm
- precise guide for KAISER PROFİ cavity wall cutter
- for single and multi-layer boarded light-weight walls and ceilings

Diameter	68 mm
Art.-No.	1083-99
Inner packaging/shipping	10 / 100

EXPERT cutter

The new EXPERT cutter is the ideal tool for creating installation openings in drywalls with increased requirements. Carbide teeth enable use in hard materials and guarantee maximum operating life. The high dimensional accuracy guarantees precise and professional installation of KAISER boxes.

- longest service life due to carbide teeth
- Faster installation thanks to reliable drilled core ejection
- With holder, centring drill, countersink hole cutter and drilled core ejector
- Cutting diameter 68 mm and 74 mm
- Multifunctional use in almost all board materials
- Unique triangular-round cutter geometry for maximum hole precision

Technical information

Optimised cutting performance thanks to the innovative trilo geometry of the saw teeth.

EXPERT cutter including holder, centring drill, spring and carbide countersink hole cutter

EXPERT cutter for dimensionally accurate installation openings in hard board materials or combinations.

Exact openings enable the professional installation of cavity wall boxes.

EXPERT carbide cutter

- Carbide tipped cutter head and countersink hole cutter
- extremely powerful
- very long operating life
- Removable countersink hole cutter
- fits all electric drills with 13 mm chuck

Quick ejector for cavity wall cutter

NEW

INNOVATION

The quick ejector enables the drilled core to be ejected quickly and reliably using the safety push handle. The adapter allows different cutter heads to be mounted and easily changed depending on the application.

- Exact drilling due to advance drill
- Solid and high-quality components ensure a long service life
- System solution matched to the KAISER PROFI and EXPERT cavity wall cutters

Quick ejector – Operation

Create drill hole.

Drilled core remains in the cutter head.

Push out and remove the drilled core using the push handle.

Push the push handle back to the starting position.

System overview – Quick ejector for cavity wall cutters

Quick ejector set

NEW

- including KAISER PROFI cutter head Ø 68 mm with adapter
- with centering drill Ø 6 mm
- Allen key 2.5 and 5 mm

INNOVATION

Entry thread drill holder hexagonal shank	11 mm
Art.-No.	1083-80
Inner packaging/shipping	- / 1

Quick ejector shaft

NEW

- Exclusively for PROFI or EXPERT cutter heads Ø 68 or Ø 74 mm
- including cutter adapter
- with centering drill Ø 6 mm
- Allen key 2.5 mm

Entry thread drill holder hexagonal shank	11 mm
Art.-No.	1083-81
Inner packaging/shipping	- / 1

Quick ejector adapter

NEW

- Exclusively for PROFI or EXPERT cutter heads Ø 68 or Ø 74 mm
- Adapter for using cutter heads on the quick ejector shaft

Art.-No.	1083-85
Inner packaging/shipping	- / 1

Safe and reliable - create installation openings using a quick ejector

The adapter (Art. No. 1083-85) can be used to mount different cutter heads on the quick ejector. Depending on the application, you can choose between the two cutter heads PROFI and EXPERT. Both diameters 68 and 74 mm are compatible, and the use of a rim countersink is also possible. To do this, the cutter head simply needs to be fitted once with an adapter and then screwed onto the quick ejector shaft. Thanks to the special thread, it is easy to change. At the same time, this backlash-free mounting ensures perfect concentricity of the cutter head and thus dimensionally accurate installation openings.

NEW

INNOVATION

Dust extraction for cavity wall cutters

The dust extraction system for cavity wall cutters effectively prevents the formation of dust when creating installation openings for installation boxes in drywalls or built-in luminaires in suspended ceilings.

- Reduction of dust pollution on the construction site
- Ideally suited for subsequent installation in existing buildings
- System solution matched to the KAISER cavity wall cutters
- For all electric drills with 13 mm chuck

Application examples

Cleanliness during ceiling installation, e.g. for spotlights, especially when retrofitting.

Using the extraction system prevents the release of hazardous dust and increases the operating life of the cutter head.

Dust extraction is compatible with the PROFI and EXPERT Ø 68 / 74 mm cutter heads.

The special contour in the cutter heads enables reliable extraction of drilling dust.

System overview – Dust extraction for cavity wall cutters

Dust extraction for cavity wall cutters

NEW

- Exclusively for PROFI or EXPERT cutter heads Ø 68 or Ø 74 mm
- Vacuum cleaner hose attachments from Ø 31 - 36 mm
- Including centring drill Ø 6 mm

Entry thread	5/8" – 18 UNF
Entry thread drill holder hexagonal shank	11 mm
Art.-No.	1088-50
Inner packaging/shipping	- / 1

Prevent dust from forming in the first place

The dust particles produced when cutting box holes in drywall or timber construction are often underestimated. This also poses enormous risks for the trade carrying out the work: inhaling plaster and wood dust can also lead to long-term damage, such as cancer in the nose and sinuses, and can cause dangerous pneumoconiosis. Extracting dust directly at the cutting point with the new KAISER dust extraction system for cavity wall cutters is the most efficient method for working with low dust levels and protecting the health of the craftsman.

Distance cutter, Profix

Profix, the bit for electric drills for quick and precise cutting of Ø 68 mm installation openings at the standard distance. Can be used in cut openings or existing cavity wall boxes. Available with and without dust extractor.

- With spirit level for exact insertion of horizontal and vertical combinations
- Standard distance of 71 mm or 91 mm without time-consuming measuring and marking
- For expansion of existing cavity wall box combinations
- For electric drills with Ø 43 mm euro clamping collar
- centering plate can also be used in existing cavity wall boxes for the expansion of existing equipment

Distance cutter Profix – operation

Distance 71 mm: Cut first opening as usual. Insert centering plate into first opening and cut second opening.

Adjust from 71 to 91 mm: Pull back clip nose with spring and turn centering plate by 180°.

Move centering plate to new position and lock centering plate.

Distance 91 mm: Insert centering plate into existing hole or box, align and cut additional opening.

Distance cutter, Profix

- for the cutting of cavity wall installation openings with dimensionally accurate combination distances of 71 mm, optionally adaptable to a distance of 91 mm
- for horizontal and vertical combinations

Up to 13 mm chuck	Yes	-	Yes	-
for SDS-plus quick-change chuck	-	Yes	-	Yes

VARIOCUT

VARIOCUT universal hole cutter for clean circular cut-outs in cavity wall and ceiling materials. The hardened metal cutter inserts can cut variable openings with a cutting depth of 45 mm.

- Making clean circular cut-outs using protective cover with dust extractor
- For light installation openings and circular cut-outs Ø 65 - 120 mm in diameter
- Continuously adjustable cutter inserts
- centering cutter aid making it secure to guide the centering drill

Operation

Set and lock required diameter and prescribed cutting depth.

Mark the centre point for drilling (use centering cutter if necessary). Set appropriate speed on electric drill. Pre-drill plates to Ø 6 mm before cutting.

Use VARIOCUT centering drill. Start drilling, push the protective cover down flat on the surface and cut opening applying light pressure.

As soon as a hole has been drilled, turn off the electric drill immediately. Wait until the machine has fully stopped before removing the VARIOCUT and removing the cut-out material.

VARIOCUT universal hole cutter for cavity wall building materials

- with hardened metal cutter inserts for cavity wall materials
- Vacuum cleaner hose attachments from Ø 31 - 36 mm
- including twist drill 6 mm

Cut hole Ø	65 - 120 mm
Depth of cutting hole	45 mm
Art.-No.	1089-00

Universal opening cutter

Universal opening cutter for creating exact openings for cable and conduit entries in plastics. Creating exact openings for boxes and housings always results in exact air-tight, smoke-tight and concrete-tight entries.

- For conduit and cable entries
- For air-tight and smoke-tight openings
- For strain-relieved openings
- For all types of plastic

Operation

Depending on the use, find the required diameter in the corresponding table and locate on tool.

Press snap-in button. Turn the handle and push to required position until the arrow point is visible in the opening. Turn handle back and click into place.

Push the point into the housing and cut out required opening by turning to the right.

TIP: To cut several openings or work with hard plastic, you can fit the opening cutter on the 1/4" bit of a battery-powered drill.

Assignment table for universal cavity wall opening cutter

	DIN EN 25 — Ø 25 mm	22.5

Universal opening cutter for plastics

- for manufacture of exact entry size
- for low-voltage wiring of Ø 4 - 7.5 mm
- for sheathed cabling up to 5 x 2.5 or 7 x 1.5
- for cable NYY up to 5 x 2.5
- for DIN EN conduits (flexible) with outer Ø of up to 20/25 mm
- with 1/4" chuck size for battery-powered drills

For exact openings	4 - 22,5 mm
Art.-No.	1085-80
Inner packaging/shipping	- / 10

AMZ 2 stripping pliers

- for longer cables: integrated knife for longitudinal cutting
- ergonomic design - easy-to-use
- hardened and polished cutting knife

For stripping NYM cables	3 x 1,5, 5 x 2,5 mm
Art.-No.	1190-02
Inner packaging/shipping	- / 10

Examples of use

Using the KAISER stripping pliers, (Art. No. 1190-02), remove the insulation from the cable.

Remove cable sheath and screen with AMZ 2 (Art. No. 1190-02).

Hole punch and expanding dowel fitting tool

- for concrete construction installation
- for fixing to steel formwork with expanding dowel 1217-02
- for all boxes, casings, bushes, etc.

Length	150 mm	340 mm
Art.-No.	1284-62	1284-63
Inner packaging/shipping	- / 1	- / 1

Nail inserter

- for concrete construction installation
- for fixing to wooden formwork with steel nails max. head Ø 4 mm
- for all boxes, casings, bushes, etc.

Length	150 mm	340 mm
Art.-Nr.	1284-69	1284-68
Verpackung innen/Versand	- / 1	- / 1
PG 170 Preis € / 1 ST	108,00	201,00

Punch pliers

- for concrete construction installation
- for exact entries for installation conduits
- with plate ejector
- punch bits exchangeable

DIN EN conduit Ø	20 mm	25 mm
Art.-No.	1286-33	1286-34
Inner packaging/shipping	- / 1	- / 1

Punch bit inserts for punch pliers

- consists of cutter plate and cutting punch, hardened and polished

DIN EN conduit Ø	20 mm	25 mm
Art.-No.	1285-33	1285-34
Inner packaging/shipping	- / 1	- / 1

Reamer

- for concrete construction installation
- for enlarging pre-cut holes

DIN EN conduit Ø	25 mm	32 mm	40 mm
Art.-No.	1284-34	1284-35	1284-36

Conduits and cables

DIN 60423 contains the dimensions for electrical conduits. DIN EN 61386 regulates the designations and properties. This results in clear statements about dimensions, designations and qualities of the conduits. Seven different external diameters are available – uniform for all installation types from flush-mounting to concrete construction: Outside diameters 16, 20, 25, 32, 40, 50 and 63 mm. The following conduit types and cables may be used for the individual construction methods:

Flush-mounting (masonry) construction

Sheathed cables (e.g. NYM, cables e.g. NYY) and multi-lead wiring (e.g. NYIF) in the so-called in-plaster technique in dry rooms are permitted.

In conduits for light construction – classification 2 (min. compressive strength 320 N/5 cm) or higher – , core HO7V cables... (Insulated single wires) and sheathed cables, e.g. NYM, can be guided.

Manufacturer's designation for the conduits, e.g.

Fränkische Rohrwerke:	FBY-EL (flexible) FBY-EL-F (smooth, flexible)
Hegler:	Heglerflex EYL (flexible) Heglerplast EL (rigid)
PIPELIFE:	FB-E-L (flexible) IPM-E-LF (rigid)

Cavity wall construction

Cables without protective conduits whose sheaths are made of flame-retardant plastic, e.g. PVC for sheathed NYM cable are permissible. Multi-lead wiring is not permissible.

In conduits for light construction – classification 2 (min. compressive strength 320 N/5 cm) or higher – as well as additional flame resistance, core HO7V cables... (insulated single wires) as well as sheathed cable, e.g. NYM, can be guided.

Manufacturer's designation for the conduits, e.g.

Fränkische Rohrwerke:	FBY-EL-F (flexible) FFKu-EL-F-HO (flexible)
Hegler:	Heglerflex EYLF (flexible) Heglerflex EL (flexible) Heglerplast-EL (rigid)
PIPELIFE:	FB-E-LF (flexible) KuMS-E-MF (flexible)

Concrete construction

Cables without a protective tube are permissible, e.g. NYY or NYZXY.

Feed-throughs or connections at joints (e.g. wall-ceiling) can only be carried out in the case of stripped core cables or cables in concrete installation boxes or casings only according to DIN

EN 60670. In conduits for a medium construction – classification 3 (min. compressive strength 750 N/5 cm) or higher – , core HO7V cables... (insulated single wires) or sheathed cable, e.g. NYM, can be guided.

Manufacturer's designation for the conduits, e.g.

Fränkische Rohrwerke:	FFKuS-EM-F (flexible) FFKuS-EM-F105 (flexible)
Hegler:	Heglerflex ESPM (flexible) Heglerflex-ESPM105 (flexible) Heglerplast-EPKM (rigid)
PIPELIFE:	Ku-P-AS-E-MF-105 (flexible) RP-E-SF-UV (flexible) KuMS-E-MF (flexible) PSM-v-E-SF (rigid)

As there are currently no specifications in the standard regarding the minimum compressive strength in relation to the type of installation, the conduit manufacturer's specifications must be followed, especially in the concrete construction sector.

Note: The maximum temperature during the casting process for our concrete construction installation boxes with VDE certification is -5 to 90°.

Intelligent building system technology (KNX, LON, etc.)

For the installation of flush-mounting and cavity walls, special one-gang boxes (electronics boxes) are included in the corresponding programme parts.

Disposal

KAISER products are not subject to the electrical/electronic scrap ordinance and are therefore currently not subject to compulsory labelling. For disposal of the packaging, KAISER's trade partners in Germany (electrical wholesalers) offer the installer or end user the option of taking it back (and thus returning it to the cycle).

Fire resistance according to DIN EN 60670

The test is carried out according to DIN EN 60695 S. 2-11. It is carried out as a glow wire test with subsequent test temperatures.

650°C	U	Flush-mounting	
650°C	B	Concrete construction	
650°C	I	In-plaster	
650°C	A	Surface-mounting	
650°C / 850°C		Covers / lids	/
850°C	H	Cavity wall	
850°C	i	Terminals	

Functional integrity of cables / cable systems

Functional integrity is given if no short circuit and no interruption of the current flow in the cable/cable systems occurs in the electrical system during a fire test. The functional integrity is divided into classes from E30-E120 according to DIN 4102 S.12. This means that the installations must withstand a fire for 30-120 minutes. The materials used for such measures must consist of non-combustible building materials (building material class A).

One-gang junction boxes

One-gang junction boxes have, in addition to the accessory volume, space for at least 3 connection terminals. All KAISER one-gang junction boxes may be used as junction boxes when using screwed lids with a fire resistance of 650°/850° C according to DIN EN 60670.

Halogen-free materials (preventive fire protection)

To prevent personal injury or damage to property, the use of halogen-free materials may be mandatory. All KAISER flush-mounting and concrete building boxes, casings, luminaire and loudspeaker housings are halogen-free. Boxes and casings for cavity wall mounting as well as some accessories are included in the range as halogen-free items.

Cavity wall boxes

According to DIN EN 60670, cavity wall boxes are subjected to special safety tests and must be marked with the symbol .

Combinations

Combinations for multiple cover frames of the units are made by stringing together one-gang boxes and/or one-gang junction boxes. The combination distance for this is 71 mm according to DIN 49075.

Combinations of high voltage and low voltage equipment, e.g. antenna sockets, can be shared if only touch-proof sockets are used.

When using sockets that are not safe to touch (still available), a separate cover must be provided for. Usually, the distance between the installation boxes is then 91 mm (more if necessary) and is created by means of distance supports or the use of appropriate tools.

Light hook

Suspension devices for luminaires, e.g. light hooks, must be able to bear at least 50 N according to DIN EN 60670 P. 21 / DIN VDE 0100 P. 559 or the specified luminaire weight with 5-fold safety.

Equipotential bonding

There must be a main equipotential bonding in every building. A so-called additional equipotential bonding must also be carried out according to DIN VDE 0100 P. 701 in rooms with bathtubs or showers, as well as for covered swimming facilities. Due to the easier accessibility for disconnecting and measuring at a later stage, it is expedient to carry out this additional potential equalisation in a corresponding housing with an equipotential bonding busbar. In rooms used for medical purposes, special equipotential bonding must be carried out in accordance with DIN VDE 0100 P. 710.

Plaster protection

According to DIN 18382, protection of the executed service as well as the objects handed over for completing an installation is usually part of the installer's ancillary services. The installation boxes are normally sealed with so-called plaster or signal covers.

Protected areas

For the installation of installation boxes in bathrooms and similar rooms, the requirements according to DIN VDE 0100 S.701 must be observed.

Telephone sockets

According to standard sheet FTZ 731 TR1 issued by Deutsche Bundespost, Fernmeldetechnisches Zentralamt in Darmstadt, only one-gang boxes according to DIN 49073 are approved for the installation of telecommunication inserts.

Environmental compatibility – RoHS

Restriction of the placing on the market and use of certain hazardous substances according to EU Directive 2011/65/EU and EU Directive 76/769/EEC: The materials we use comply with the valid guidelines of the Ordinance on Hazardous Substances and fulfil the legal regulations for placing substances on the market. Emissions during normal use are not known. For more information on RoHS, please visit our website.

	Flush-mounting programme: impact-resistant polystyrene, polyethylene
	Cavity wall programme: Polypropylene
	Concrete construction programme: Polyethylene
	Luminaire and loudspeaker housings programme: Polyethylene/polyamide
	Fire protection programme: galvanised steel sheet, fire-retardant coating
	Cable glands: Polyamide, nickel-plated brass

Wall light connection boxes

According to DIN VDE 0100 S.559, wall light connection boxes must be used wherever feed lines for wall luminaires end. KAISER wall-mounted light connection boxes have space for at least 3 terminal blocks and cable reserves, as well as a screw fastening for luminaire mounting.

For more technical information on our solutions and products, please visit our website.

The installer of the installation system remains responsible for the selecting suitable types of flush-mounting boxes or enclosures and for their proper installation in terms of safety, in compliance with the installation regulations (for an overview of test marks, see table on Pg. 328). The technical advice we provide is given to the best of our knowledge and is deemed to be non-binding, also with regard to any third-party property rights.

Max. number of terminals per one-gang box, one-gang junction box, junction box and junction casing, according to DIN EN 60670. For safety reasons (avoidance of excessive heating in Junction box), according to DIN EN 60670, the number of terminals and conductors in a junction box is limited. A certain volume (terminal space unit) is required for each terminal point. This volume includes the space for the connection terminals, the conductors and the movement of the conductors in the junction box.

Max. number of terminals. Values in () are with mounted

Glass fibres insensitive to bending

are fibre optic cables with a smaller bending radius. While the permissible bending radii of an optical fibre are normally at least 30 mm, the bend-insensitive optical fibre cables according to the ITU-T G.657 specification are 10 mm and 7.5 mm respectively.

ITU-T G.657.A1

(Single mode fibre optic cable) bending radius 10 mm

ITU-T G.657.A2

(Single mode fibre optic cable) bending radius 7.5 mm

FTTX cabling (EN 50173-1)					
Class	Link length	Fibre class	Channel attenuation (dB)		Application
OF-5000	5,000 m	OS2	1310 nm 4.0 dB	1550 nm 4.0 dB	10GBase SR

Factors influencing the transmission rate

The attenuation on the fibre optic cabling route is decisive for the best possible transmission rate of a subscriber's internet connection.

The following factors are decisive:

- possible losses due to scattering or absorption
- natural line losses (length) or signal propagation delay
- losses due to splice connection

Calculation of channel attenuation (single mode fibre 150 m with 3x connectors)				
Description	Attenuation standard	Length Quantity	Calculation	Loss (dB)
Fibre attenuation loss	1.00 dB/km	150 m	0.001 x 150	0.15 dB
Insertion loss per connector	0.25 dB	4	4 x 0.25	1.00 dB
Insertion loss per splice	0.05 dB	3	3 x 0.05	0.15 dB
Total channel attenuation				1.30 dB

The maximum permissible channel attenuation (PoP to FO-SC) of 4.0 dB is not exceeded, therefore, interference-free data transmission can be guaranteed. The calculated channel attenuation must be confirmed and recorded with a certifier (measuring device) after installation of the cabling.

Fibre optic connectors

Fibre optic connectors are mounted on both sides of a fibre optic cable to create a fibre optic patch cable. In addition, the plugs are linked with a connector. The coupling is specially designed for the connectors and positions the end faces (connector end faces) against each other so that the light signal can be transmitted optimally. The connectors are polished after the manufacturing process and protected against dirt and dust with a dust cap. Before using the connectors, the front surface must be cleaned with a cleaning agent (dust-free cloth,

alcohol, cleaning pen, etc.), as the slightest contamination has a great effect on the attenuation.

In the FTTX environment, only connectors with 8° APC (Angular Physical Contact) are used. The front surface is bevelled and polished. The reflections on the fibre optic cable are not transmitted through the connector, thus improving the channel attenuation.

Plug	Max. insertion loss	Typical insertion loss	Ferrules diameter	Number of fibres	Standard	Locking
SC	0.25 dB	0.15 dB	2.50 mm	1	IEC 61754-4	Draw/Plug
LC	0.25 dB	0.15 dB	1.25 mm	1	IEC 61754-20	Clamping bracket
E2000®	0.25 dB	0.12 dB	2.50 mm	1	IEC 61754-15	Draw/Plug
E3S Connect®	0.25 dB	0.15 dB	1.25 mm	1	IEC 61754-20*	Clamping bracket

(Test method IEC 61300-3-34; guarantees a maximum insertion loss of 0.25 dB when using Grade B connectors)

*E3S Connect® connector becomes standard LC/APC connector after assembly with housing and locking housing

Fibre recognition

The fibre optic categories and connectors are differentiated by colour. This means that the colour code can be used to draw immediate conclusions about the installed system.

Category	Connectors	Patch cables
OS2 Single Mode	Blue	Yellow
OS2 Single Mode APC	Green	Yellow

Splice detection

The individual fibre optic lines in a fibre optic cable are defined by standard to simplify processing during splicing. In Germany, DIN IEC 60304 and DIN VDE 0888 applies; outside Germany, IEC 60794- 2 and TIA 598-B are also applicable.

Depending on the network operator and project (subsidised project), an up to 4x fibre optic cable per subscriber is laid for FTTH cabling. In an apartment building or larger residential complex, 2x fibre optic cables must also be provided for the building. Usually the fibre colour code 1-4 (red, green, blue and yellow) is used per subscriber, as the connection/customer cables have the same colour coding, so a clean and structured splice work is ensured.

Colour code (VDE-0888)					
1		Red	7		Brown
2		Green	8		Violette
3		Blue	9		Aqua
4		Yellow	10		Black
5		White	11		Orange
6		Grey	12		Pink

KAISER GROUP - General Glossary

Network level 1	Wide area network
Network level 2	Regional distribution network
Network level 3	Access network
Network level 4	Building network
Network level 5	Unit network
Broadband	In communications engineering, the term broadband communication describes a transmission channel whose magnitude frequency response is not constant and in which signal distortions occur as a result. Wideband channels, unlike narrowband channels, require channel equalization with adaptive filters to compensate for signal distortion.
DSL	The end customer is connected to the telecommunications network exclusively on a copper basis. In this case, the telecommunications cable runs from the main distribution frame (MDF) to the cable distribution frame (CDF) and from there to the house connection.
Vectoring	Vectoring technology is an extension of VDSL2; with the help of vectoring the crosstalk (NEXT) between the individual wires in the copper telecommunication cable can be minimized, and the transmission speed as well as the number of connected subscribers around a CDF can be increased.
FTTX	Fibre to the "X", in the case of fibre optic networks, a distinction is made between the types of connection depending on how the end customer is connected, between FTTC (Fibre to the Curb), FTTB (Fibre to the Building) and FTTH (Fibre to the Home).
HFC	Hybrid Fibre Coax is used by cable network operators to connect cable television networks (CATV) via fibre optic cable from the cable head-end (exchange) to the end branch (fibre node). The data signals are transmitted from the end splitter to the antenna socket in the house via coaxial cable.
FTTC	Fibre to the Curb; the fibre optic line is only laid to the cable distribution frame (CDF)/multifunctional housing (MFH), (integrated DSLAM (Digital Subscriber Line Access Multiplexer) at the roadside. From there, the existing copper telecommunication cables (Cu-DA) of the distribution network lead to the end customer.
FTTB	Fibre to the Building; in contrast to FTTC/VDSL, FTTB/FTTH networks consist entirely of a fibre optic infrastructure. The fibre optic line extends from the exchange (PoP) via the network distributor (FO-ND) to the house transfer point (HTP).
FTTH	Fibre to the Home; with FTTH, the entire cabling in the building up to the FO-SC also consists of fibre optic lines.
PoP	Point of Presence, different designation for the switching station
FO-ND	The fibre optic network distributor is a passive distributor for cable distribution of fibre optic communication lines within a local network
Supply sleeve	The sleeve is a passive distribution box for cable distribution of fibre optic communication lines within a local area network
FTU	Fibre Termination Unit
FO-TP / BTP	The fibre optic termination point of the network operator, other designation Building Transfer Point, other designation BEP (Building Entry Point)
FO-BD	Fibre optic building distributor, different designation PD (primary distributor)
FO-FD	THE fibre optic floor distributor, different designation FO-CP (fibre optic collection point)
FO-SC	The fibre optic subscriber connection, different designation fibre optic subscriber outlet

KAISER GROUP - Product Glossary

FMP	Splice distributor housing (fibre management plate)
FMB	Splice distributor housing with cover (fibre management box)
MFD	Hood sleeve (midi fibre dome)
CFD	Repair sleeve (compact fibre dome)
DP	"Distribution Point" is a distribution point between PoP and BTP, e.g. supply sleeve (underground) or FO-ND (above ground)

KAISER products are manufactured according to DIN, VDE, EN and IEC regulations. For the products shown in the catalogue, we have, as far as regulations exist, approval certificates from the VDE test centre as well as a number of other European test centres.

Item overview

EXPERT carbide countersink hole cutter Ø 74 mm for flush-mounting box installation	389	HaloX® 100 with tunnel 190 for on-site mixed concrete	249
EXPERT carbide cutter head Ø 68 mm with ejector spring	389	HaloX® 100 front parts, square for facing concrete	251
EXPERT carbide cutter head Ø 68 mm without ejector spring	389	HaloX® 180 for on-site mixed concrete	249
EXPERT carbide cutter head Ø 74 mm with ejector spring	389	HaloX® 180 for precast concrete	262
EXPERT carbide cutter head Ø 74 mm without ejector spring	389	HaloX® 180 for precast concrete for magnet attachment	263
EXPERT carbide cutter Ø 68 mm with countersink hole cutter and holder for centering drill	388	HaloX® 180 front parts	252
EXPERT carbide cutter Ø 74 mm with countersink hole cutter and holder for centering drill	388	HaloX® 180 front parts for facing concrete	252
Extension element 10/50 mm	223	HaloX® 180 universal front parts	252
Extension element for ThermoX® Iso +	68	HaloX® 180 with tunnel 190 for on-site mixed concrete	249
Extension element for universal equipment carrier	59/61	HaloX® 180 with tunnel 190 for precast concrete	262
Extension piece - 12mm - for junction box 9907/9907.21	170	HaloX® 180 with tunnel 325 for on-site mixed concrete	249
Extension piece - 13mm - for junction box	83/170	HaloX® 180 with tunnel 325 for precast concrete	262
Extension piece - 45mm - for flush-mounted junction box 9907/9907.21	170	HaloX® 180 with tunnel for precast concrete for magnet attachment	263
Extension piece - 45mm - for junction box	83	HaloX® 250 for on-site mixed concrete	249
Extension pieces for extra-large flush-mounted junction boxes	194	HaloX® 250 for precast concrete	262
Extension rings HaloX®	254/259/265	HaloX® 250 for precast concrete for magnet attachment	263
Extra-large flush-mounted junction boxes	192/193	HaloX® 250 front parts	253

To ensure that you can rely on both our **guaranteed product quality** and our delivery promise, both us and our subsidiaries are members of many relevant associations and co-operations. With an international network of partnerships, we always know what the market demands.

The German **Broadband Association (Bundesverband Breitbandkommunikation e.V. / BREKO)** represents the majority of all alternative fixed broadband network operators in Germany. Its members pave the way for future-proof fibre infrastructure and currently account for 80 percent of the competitive FTTB/H deployment in Germany.
www.brekoverband.de

The initiative "**Elektromarken. Starke Partner**" (**Electric brands. Strong partners**) of the 17 leading brand manufacturers brings together the reliable competence and proven quality of the German electrical industry. At the very least, this means an incomparable range of high-quality products and services for the electrical trade.
www.elektromarken.de

The initiative **ELEKTRO+** provides objective information for the planning and execution of electrical installations to principals and experts for new installations as well as modernisations.
www.elektro-plus.com

The **Export Initiative Energy Efficiency** was established by the Federal German Government. It supports German providers with exporting products and services in the field of energy efficiency.
www.efficiency-from-germany.info

The **ETIM** association develops and distributes a classification model for the electrical industry in collaboration with renowned enterprises.
www.etim.de

The **Gemeinsame Ausschuss Elektronik im Bauwesen** (Joint Committee for Electronics in Construction) supports the use of data processing in construction with respect to the common language of everyone involved in the construction process.
www.gae.de

VDE - these three letters stand for one of the major European associations for branches and professions in electrical engineering and information technology. An international expert platform for science, standardisation and product testing.
www.vde.com

The **VEG** is the professional association of electrical wholesalers in Germany. The purpose of the association according to its statutes is the protection, perception and promotion of the general idealistic and economic interests of its members.
www.veg.de

The **ZVEH** represents the economic and political interests of approximately 76,000 electrical and information technology companies at the national and international level.
www.zveh.de

Der **ZVEI** ist einer der wichtigsten Industrieverbände Deutschlands. Er vertritt die Interessen einer Hightech-Branche mit einem sehr breit gefächerten und äußerst dynamischen Produktportfolio.

As an innovative manufacturer of products and system solutions for professional electrical installation, the KAISER GROUP is now one of the market leaders in Europe. With an international sales network and the subsidiaries AGRO in Switzerland, HELIA in Belgium and Attema in the Netherlands, we are always there for our customers. The close collaboration of the four companies generates considerable synergies from which our partners in the trade, commerce and industry benefit.

Shaping the future **together.**

The KAISER, AGRO, ATTEMA and HELIA brands consistently offer you installation solutions which meet the needs of the market and thereby effectively support you in your daily work. Through their continuous future-oriented product innovations, these four strong brands provide assurance that you are always at the state of the art– today and tomorrow.

KAISER headquarters
Schalksmühle, Germany

With a large network of distribution partners and representatives as well as our clearly structured warehouse logistics, we always guarantee the fastest availability of our products. With our personal advisory service, we always get quickly on site with you – no matter where your project is being built.

Across Europe. Close to you.

Solutions and systems for professional installations.

KAISER has been developing and producing systems and products as the basis for professional installation work since 1904. Planners and fitters all over the world use our practice-oriented solutions for their daily work in all installation areas.

Electrical installation.

Innovative, safe and economically viable solutions for a wide range of applications in buildings and ships. They make daily work easier and ensure safe, sustainable installation results in both traditional and pluggable electrical installations.

Connectivity / fibre-optic broadband expansion.

A practical, innovative solution offering for professionals. From street distribution to building distribution to flat distribution, pluggable and pre-assembled, ready-to-splice products are available for efficient installation.

Cable glands / industrial products.

AGRO cable glands made from plastic, brass or stainless steel for the highest quality and practicality. The complete range for trade and industry also includes products with enhanced requirements (EMC, EX), elbow cable glands or universal and multi-cable entries.
